Neuropsychology Of Visual Perception:

Neuropsychology of Visual Perception Jason W. Brown, 2017-03-27 Originally published in 1989 this sourcebook for anatomic studies in the neuropsychology of visual perception contains chapters on disorders of visual agnosias impaired object perception and spatial neglect and abnormal visual imagery The neurological basis of visual perception and the disorders that result from brain damage are discussed At the time the chapters in this volume constituted a state of the art survey in this area and provided data that were essential for the development of models of normal image and object formation

The Neuropsychology of Vision Manfred Fahle, Mark Greenlee, 2003-10-30 The Neuropsychology of Vision describes a range of new approaches to neuropsychological investigation and provides a broad overview of visual neuropsychology The book starts by presenting the results from new research employing single unit recordings on the neuronal basis of perception demonstrating that the visual system relies strongly on feedback from higher to lower levels of information processing and that neuronal plasticity exists in the primary sensory cortices of adults areas previously considered to be hard wired The book also describes other new and adapted techniques to measure brain activity including multi unit sum potential recording functional magnetic resonance imaging and employing transcranial magnetic stimulation to induce temporary circumscribed functional lesions in the cortices of normal subjects to mimic disorders The coverage then moves on to review the experience of patients suffering from disturbances of visual perception The disorders covered include agnosia neglect blindsight and achromatopsia The final chapter is devoted to recovery and rehabilitation from cerebral visual disorder Professors Fahle and Greenlee have brought together some of the leading international specialists in the field to provide this comprehensive and up to date review

Case Studies in the Neuropsychology of Vision Glyn W. Humphreys, 2013-04-15 One important means to understanding normal cognitive functions is the study of the breakdown of these functions following brain damage This book provides reviews of major case studies dealing with the breakdown of visual perception and recognition including the disorders of motion vision colour vision perceptual integration perceptual classification recognition of particular categories of object semantic access from vision in optic aphasia and recognition impairments with relative sparing of imagery The cases are discussed in the light of studies that have followed since and the chapters provide a context in which the contributions of the case studies can be evaluated

Visual Object Processing Glyn W. Humphreys, M. Jane Riddoch, 2017-03-27 Originally published in 1987 this book attempted to bring together work by researchers concerned with the functional and neurological mechanisms underlying visual object processing and the ways in which such mechanisms can be neurologically impaired The editors termed it a Cognitive Neuropsychological approach because they believed it tried to relate evidence from neurological impairments of visual object processing to models of normal performance in a new and important way Two broad aims are apparent One is to test models of normal performance by evaluating how well the models account for the patterns of impairment and preservation of abilities that can occur

following brain damage The other is to use models of normal performance to further their understanding of acquired disorders of visual object processing These aims distinguish the approach from neuropsychological work whose primary aim is to relate acquired deficits to the sites of damage and from work in the field of cognitive psychology which attempts only to develop models of normal performance

The Neuropsychology of High-level Vision Martha J. Farah, Graham Ratcliff, 1994 This book provides a state of the art review of high level vision and the brain Topics covered include object representation and recognition category specific visual knowledge perceptual processes in reading top down processes in vision including attention and mental imagery and the relations between vision and conscious awareness Each chapter includes a tutorial overview emphasizing the current state of knowledge and outstanding theoretical issues in the authors area of research along with a more in depth report of an illustrative research project in the same area The editors and contributors to this volume are among the most respected figures in the field of neuropsychology and perception making the work presented here a standard setting text and reference in that area

Visual Cognition Glyn W. Humphreys, Vicki Bruce, 1989 Visual Cognition provides the first major attempt to cover all aspects of this work within a single text It provides a summary of research on visual information processing relevant to advanced undergraduates postgraduates and research workers

Active Vision John M Findlay, Iain D Gilchrist, 2003-08-07 This title focuses on vision as an active process rather than a passive activity and provides an integrated account of seeing and looking The authors give a thorough description of basic details of the visual and oculomotor systems necessary to understand active vision

Theories of Visual Perception Ian E. Gordon, 2004-09-30 Theories of Visual Perception 3rd Edition provides clear critical accounts of several of the major approaches to the challenge of explaining how we see the world It explains why approaches to theories of visual perception differ so widely and places each theory into its historical and philosophical context Coverage ranges from early theories by such influential writers as Helmholtz and the Gestalt School to more recent work in the field of Artificial Intelligence This fully revised and expanded edition contains new material on the Minimum Principle in perception neural networks and cognitive brain imaging

Visual Perception Steven Yantis, 2001 First Published in 2001 Routledge is an imprint of Taylor Francis an informa company

Visual Attention and Cognition W.H. Zangemeister, H.S. Stiehl, C. Freksa, 1996-09-23 The goal of this book is to put together some of the main interdisciplinary aspects that play a role in visual attention and cognition The book is aimed at researchers and students with interdisciplinary interest In the first chapter a general discussion of the influential scanpath theory and its implications for human and robot vision is presented Subsequently four characteristic aspects of the general theme are dealt with in topical chapters each of which presents some of the different viewpoints of the various disciplines involved They cover neuropsychology clinical neuroscience modeling and applications Each of the chapters opens with a synopsis tying together the individual contributions

The Neuropsychology of High-level Vision Martha J. Farah, Graham Ratcliff, 2013-04-15 This book provides a state of the art review of high level vision and the brain

Topics covered include object representation and recognition category specific visual knowledge perceptual processes in reading top down processes in vision including attention and mental imagery and the relations between vision and conscious awareness Each chapter includes a tutorial overview emphasizing the current state of knowledge and outstanding theoretical issues in the authors area of research along with a more in depth report of an illustrative research project in the same area The editors and contributors to this volume are among the most respected figures in the field of neuropsychology and perception making the work presented here a standard setting text and reference in that area

Handbook of Cognitive Neuropsychology Brenda Rapp, 2015-12-22 This volume reviews the full range of cognitive domains that have benefited from the study of deficits Chapters covered include language memory object recognition action attention consciousness and temporal cognition

Theories of Visual Attention - linking cognition, neuropsychology, and neurophysiology Søren Kyllingsbæk, Signe Allerup Vangkilde, Claus Bundesen, 2015-09-02 The Neural Theory of Visual Attention of Bundesen Habekost and Kyllingsbæk 2005 was proposed as a neural interpretation of Bundesen's 1990 theory of visual attention TVA In NTVA visual attention functions via two mechanisms by dynamic remapping of receptive fields of cortical cells such that more cells are devoted to behaviorally important objects than to less important ones filtering and by multiplicative scaling of the level of activation in cells coding for particular features pigeonholing NTVA accounts for a wide range of known attentional effects in human performance and a wide range of effects observed in firing rates of single cells in the primate visual system and thus provides a mathematical framework to unify the 2 fields of research In this Research Topic of Frontiers in Psychology some of the leading theories of visual attention at both the cognitive neuropsychological and neurophysiological levels are presented and evaluated In addition the Research Topic encompasses application of the framework of NTVA to various patient populations and to neuroimaging as well as genetic and psychopharmacological studies

Visual Perception Vicki Bruce, Patrick R. Green, Mark A. Georgeson, 2003 This comprehensively updated and expanded revision of the successful second edition continues to provide detailed coverage of the ever growing range of research topics in vision In Part I the treatment of visual physiology has been extensively revised with an updated account of retinal processing a new section explaining the principles of spatial and temporal filtering which underlie discussions in later chapters and an up to date account of the primate visual pathway Part II contains four largely new chapters which cover recent psychophysical evidence and computational model of early vision edge detection perceptual grouping depth perception and motion perception The models discussed are extensively integrated with physiological evidence All other chapters in Parts II III and IV have also been thoroughly updated

Visual Agnosia Martha J. Farah, 1990 Visual Agnosia is a comprehensive and up to date review of disorders of higher vision that relates these disorders to current conceptions of higher vision from cognitive science illuminating both the neuropsychological disorders and the nature of normal visual object recognition Brain damage can lead to selective problems with visual perception including visual agnosia the inability

to recognize objects even though elementary visual functions remain unimpaired. Such disorders are relatively rare yet they provide a window onto how the normal brain might accomplish the complex task of vision. *Visual Agnosia* reviews a century of case studies of higher level visual deficits following brain damage places them in the general context of current neuroscience and draws relevant conclusions about the organization of normal visual processing. It is unique in drawing on research in cognitive psychology, computational vision, visual neurophysiology and neuropsychology to interpret the agnosias and draw inferences from them about visual object recognition. Following a historical account of agnosia research, *Visual Agnosia* offers a taxonomy of a wide range of agnosia syndromes describing and interpreting the syndromes in terms of the latest theoretical models of visual processing and ultimately bringing them to bear as evidence on a variety of questions in the study of higher vision. Martha J. Farah is Associate Professor of Psychology at Carnegie Mellon University. *Visual Agnosia* is included in the *Issues in Biology of Language and Cognition* series edited by John Marshall. **A Reader in Visual Agnosia** Glyn Humphreys, Jane Riddoch, 2016-01-13. The case study of John has provided a unique insight into the nature of visual agnosia and more broadly into the underlying processes which support human vision. After suffering a stroke, John had problems in recognizing common objects, faces, seeing colours, reading and finding his way around his environment. *A Reader in Visual Agnosia* brings together the primary scientific papers describing the detailed investigations for each visual problem which the authors carried out with John, known as patient HJA. This work was summarised initially in *To See But Not To See* 1987 and 26 years later in *A Case Study in Visual Agnosia Revisited* 2013. The chapters are divided into 6 parts corresponding to the key areas of investigation: Integrative visual agnosia, Perception of global form, Face perception, Colour perception, Word recognition, Changes over time. Each part contains a short introduction written by the two leading researchers who worked with John, which highlights the relations between the papers and demonstrates the pathway of the case analysis. The book will be invaluable to students and researchers in visual cognition, cognitive neuropsychology and vision neuroscience. **Perceptual Organization in Vision** Ruth Kimchi, Marlene Behrmann, Carl R. Olson, 2003. Understanding visual perceptual organization remains a challenge for vision science. *Perceptual Organization in Vision: Behavioral and Neural Perspectives* explores ideas emanating from behavioral, developmental, neuropsychological, neurophysiological and computational approaches to the problem of perceptual organization. The growing body of research on perceptual organization has converged on a number of critical issues, most of which are addressed in this volume. These include issues concerning the nature and order of organizational processes, the stimulus factors that engage the mechanisms of organization, the developmental stage at which the mechanisms of organization are available, the role of past experience and learning in organization, the neural mechanisms underlying perceptual organization and the relations between perceptual organization and other cognitive processes in particular object recognition and visual attention. Divided into four parts, the book is designed not only to detail the current state of the art in the field but also to promote an interdisciplinary

approach to the study of perceptual organization Part I presents an overview of the problem of perceptual organization different frameworks for understanding perceptual organization and a state of the art summary of the domain Part II details which organizational processes are hardwired in the perceptual system which are acquired through experience and how object perception relates to other aspects of cognition Part III describes various attempts to understand the neural mechanisms underlying perceptual organization using two different approaches neurophysiological and neuropsychological Part IV offers a computational approach to the problem This book is intended for cognitive psychologists neuroscientists computational vision scientists and developmental psychologists Perception and Action Jean Decety,1998 Presents original contributions from cognitive neuroscientists and cognitive neuropsychologists who address this area from different complementary perspectives **Psychology and Neuropsychology of Perception, Action, and Cognition in Early Life** Silvio Ionta,Els Ortibus,Jane Elizabeth Aspell,2022-04-04 **Neuropsychological Assessment** Muriel Deutsch Lezak,2004 This revised text provides coverage of research and clinical practice in neuropsychology The 4th edition contains new material on tests assessment techniques neurobehavioral disorders and treatment effects
