## Archeological Reconstruction

**Production and Exchange of Stone Tools.** Prehistoric Obsidian in the Aegean. ROBIN TORRENCE. Cambridge University Press, New York, 1986. xiv, 256 pp., illus. \$44.50. New Studies in Archaeology.

One goal of archaeology today is the development of "middle-range theories" or interpretative methodologies for reconstructing past cultural behavior. The main objective of this volume is the formulation of middle-range theory to link archaeological data with specific kinds of economic exchange. The volume is a stimulating piece of research that (i) identifies the behavioral correlates of exchange, (ii) discusses how to recognize and measure this behavior from archaeological residues, and (iii) provides a test case using Neolithic and Bronze Age data from the European Aegean.

Most attempts to reconstruct prehistoric exchange networks have focused on consumption levels and the frequency with which items move over space. Though this regional approach has been fairly successful, it presents the problem that different forms of distribution (such as direct barter, gift prestations, balanced reciprocity, and direct procurement) can produce identical distributions of archaeological materials. Torrence questions the regional approach and proposes that exchange also be examined from the perspective of how production systems are organized to meet resource demands.

Torrence believes that production provides an indirect measure of the volume of exchange. Levels of craft specialization, technical skill, resource ownership, and divisions of labor are ways the production systems respond to demand. As exchange increases, societies will adopt more expedient, standardized and cost-efficient means of production. The author uses the production and exchange of stone tools to develop quantitative and qualitative measures that archaeologists can use to evaluate levels of economic interaction. Stone tools are an important component of archaeological assemblages the world over, and the methodology developed here will be useful to archaeologists working in many cultural settings.

Mesoamerican archaeologists will find the volume particularly useful because the author examines critically many assumptions and approaches used in that area.

The measures for examining exchange from a production perspective are developed in an orderly and scientific way. A review of the literature on reconstructing exchange relationships provides a backdrop against which to contrast the production approach. The behavioral factors linking production to exchange are then developed in a chapter reviewing the ethnographic aspects of stone tool production. The specific methodology for the production approach is developed with reference to Aegean obsidian exchange during the Neolithic and the Bronze Age. The author examines obsidian exchange from three different perspectives. First, the regional perspective is used to examine how efficient procurement networks moved obsidian over space. Second, habitation sites are examined to evaluate whether production was carried out by full- or part-time craft specialists within a commercial economy. Finally, mining and quarrying activities at the Melos obsidian source are examined for what they indicate about the intensity, efficiency, and specialization of commercial exploitation.

The conclusions reached are at variance with traditional interpretations of Aegean obsidian exchange. The author finds little evidence for either commercial or entrepreneurial procurement of obsidian at any level of the economy. Mining at the Melos obsidian quarries appears to have been sporadic and was not monopolized by any particular group. Attempts to measure standardization of production demonstrate that there is little variation in the morphology and efficiency of tools produced in workshops as opposed to domestic locales. Production efficiency as measured by error rates, platform preparation, and tool dimensions in Bronze Age sites is similar to what the author presents for part-time and nonspecialized knappers in New Guinea and Ethiopia. The author concludes that the data do not support the existence of Bronze Age commercial workshops throughout the Aegean. Rather, stone tool procurement, production, and exchange were carried out on the basis of efforts by part-time specialists within a multifaceted economy involving long-distance maritime exchange.

The book provides a useful model for the development of middle-range theory on exchange. It is not surprising that the author used obsidian, which has been the focus of numerous economic studies. The challenge for other archaeologists is to achieve the same level of sophistication using ceramic, ground stone, or other artifact categories.

Although there will be difficulties, this volume provides a valuable example of how this work might proceed.

## The Role of GABA

**Neurotrophic Activity of GABA During Development.** DIANNA A. REDBURN and ARNE SCHOUSSBO, Eds. Liss, New York, 1987. xii, 277 pp., illus. \$66. Neurology and Neurobiology, vol. 32. Based on a symposium, Mexico City, July 1986.

The development of the vertebrate central nervous system is an exceedingly complex process. It involves many cell cycles, terminal division, and cellular differentiation or death, as well as cell migration and sustained maintenance of the phenotype in the context of intricate neuronal and glial circuits. Elucidation of the cellular and molecular bases underlying this dynamic period of growth has attracted an increasing number of neurobiologists and will continue to engage many generations of scientists.

This book is a brief and relatively eclectic collection of papers derived from a meeting on the neurotransmitter gamma-aminobutyric acid (GABA) and its trophic role in the vertebrate CNS. The material is arranged in nine chapters by 19 investigators, most of whom have studied the possibility that GABA not only acts as a transmitter mediating rapid forms of intercellular communication at central synapses in the adult but also has potential functions during the development and differentiation of the CNS. Some of the chapters are extensive attempts to review the vast literature relevant to GABA in CNS tissue, whereas others are revised versions of previously published observations with descriptions of new or confirmatory experiments added. Most of the contributions necessarily conclude on speculative notes since real understanding in this area is limited. Enough has been discovered to warrant this initial report.

The detection of GABA-containing cell bodies and fiber tracts in various regions of the embryonic and early postnatal CNS, the presence of specific binding and uptake reactions involving GABA and GABA mimetics with embryonic CNS membranes and cells, and the pharmacological effects of GABA and GABA mimetics on the cellular properties of cultured embryonic neurons, all of which are covered in this book, support the premise that GABA plays a role, as yet undefined, in CNS development. This volume is not only a quite readable account of

**Neurotrophic Activity of GABA During Development** Dianna A. Redburn, Arne Schousboe, 1987 **The Biology of Early Influences** Richard L. Hyson, Frank Johnson, 2007-08-20 The underlying theme of this book is the role of experience in the development of the nervous system. It is now widely acknowledged that there are a variety of environmental interactions that guide the development of the nervous system. The popular press has also picked up on this theme and parents are being advised to enrich their child's sensory experience as early as possible. The importance of experience in development is so well accepted that it has begun to dictate public policy. In 1997 the President and First Lady hosted The White House Conference on Early Childhood Development and Learning. What New Research on the Brain Tells Us About Our Youngest Children. Along with this conference came a reemphasis on programs directed at enriching the environment of America's youth. In some cases laws have been passed to assure enhanced early experience. In Georgia the former governor proposed sending newborn children home from the hospital with classical music CDs. This received some praise but was also ridiculed by others who felt the policy was not justified by the available scientific evidence. Here in Florida enhanced brain development activities are mandated for state-funded child care facilities. Chapter 402.25 of the 1998 State of Florida Statutes reads: emphasis added. Infants and toddlers in state-funded education and care programs: brain development activities.

**Neuropathology of Drug Addictions and Substance Misuse Volume 3** Victor R. Preedy, 2016-04-25 Neuropathology of Drug Addictions and Substance Misuse Volume 3: General Processes and Mechanisms. Prescription Medications, Caffeine and Areca Polydrug Misuse, Emerging Addictions and Non-Drug Addictions is the third of three volumes in this informative series and offers a comprehensive examination of the adverse consequences of the most common drugs of abuse. Each volume serves to update the reader's knowledge on the broader field of addiction as well as to deepen understanding of specific addictive substances. Volume 3 addresses prescription medications, caffeine, polydrug misuse, and non-drug addictions. Each section provides data on the general molecular, cellular, structural, and functional neurological aspects of a given substance, with a focus on the adverse consequences of addictions. Research shows that the neuropathological features of one addiction are often applicable to those of others, and understanding these commonalities provides a platform for studying specific addictions in more depth and may ultimately lead researchers toward new modes of understanding causation, prevention, and treatment. However, marshalling data on the complex relationships between addictions is difficult due to the myriad of materials and substances. Offers a modern approach to understanding the pathology of substances of abuse, offering an evidence-based ethos for understanding the neurology of addictions. Fills an existing gap in the literature by serving as a one-stop shopping synopsis of everything to do with the neuropathology of drugs of addiction and substance misuse. Includes in each chapter: list of abbreviations, abstract, introduction, applications to other addictions and substance misuse, mini-dictionary of terms, summary points, 6 figures and tables, full references. Offers coverage of preclinical, clinical, and population

### **FAQs About Neurotrophic Activity Of Gaba During Development Neurology And Neurobiology Volume 3 Books**

How do I know which eBook platform is the best for me? Finding the best eBook platform depends on your reading preferences and device compatibility. Research different platforms, read user reviews, and explore their features before

making a choice. Are free eBooks of good quality? Yes, many reputable platforms offer high-quality free eBooks, including classics and public domain works. However, make sure to verify the source to ensure the eBook credibility. Can I read eBooks without an eReader? Absolutely! Most eBook platforms offer webbased readers or mobile apps that allow you to read eBooks on your computer, tablet, or smartphone. How do I avoid digital eye strain while reading eBooks? To prevent digital eye strain, take regular breaks, adjust the font size and background color, and ensure proper lighting while reading eBooks. What the advantage of interactive eBooks? Interactive eBooks incorporate multimedia elements, quizzes, and activities, enhancing the reader engagement and providing a more immersive learning experience.
