Clinical Radiotherapy Physics Subramania Jayaraman, Lawrence H. Lanzl, 2011-06-27 This book provides an in depth

introduction to radiotherapy physics The emphasis in much of the work is on the clinical aspects of the field Uniquely useful for both the physicist and non physicist Clinical Radiotherapy Physics gradually and sequentially develops each of its topics in clear concise language It includes important mathematical analyses yet is written so that these sections can be skipped if desired without compromising understanding The book is divided into seven parts covering basic physics Parts I II equipment for radiotherapy Part III radiation dosimetry Parts IV V radiation treatment planning Part VI and radiation safety and shielding Part VII For radiation oncologists radiation therapists and clinical physicists

National Conference on Radiation Shielding & Protection, 1996 **Contemporary Health Physics** Joseph John Bevelacqua, 2008-09-26 A comprehensive and practical reference on radiation protection Describes radiation basics external and internal dosimetry and biological effects of ionizing radiation Demonstrates the fundamentals and calculations as they are applied to various health physics fields Over 375 worked examples presented within the context of diverse scenarios aid readers in testing their knowledge as well as applying the concepts to actual situations

NCRP Report National Council on Radiation Protection and Measurements, 1966 Radiation Source Use and Replacement National Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on Radiation Source Use and Replacement, 2008-05-25 In the United States there are several thousand devices containing high activity radiation sources licensed for use in areas ranging from medical uses such as cancer therapy to safety uses such as testing of structures and industrial equipment Those radiation sources are licensed by the U S Nuclear Regulatory Commission and state agencies Concerns have been raised about the safety and security of the radiation sources particularly amid fears that they could be used to create dirty bombs or radiological dispersal device RDD In response to a request from Congress the U S Nuclear Regulatory Commission asked the National Research Council to conduct a study to review the uses of high risk radiation sources and the feasibility of replacing them with lower risk alternatives The study concludes that the U S government should consider factors such as potential economic consequences of misuse of the radiation sources into its assessments of risk Although the committee found that replacements of most sources are possible it is not economically feasible in some cases The committee recommends that the U S government take steps to in the near term to replace radioactive cesium chloride radiation sources a potential dirty bomb ingredient used in some medical and research equipment with lower risk alternatives The committee further recommends that longer term efforts be undertaken to replace other sources The book presents a number of options for making those replacements

 on Nuclear Data for Science and Technology held at Jillich in May 1991 The conference was in a series of application
 oriented nuclear data conferences organized in the past under the auspices of the Nuclear Energy Agency Nuclear Data
 Committee NEANDC and with the support of the Nuclear Energy Agency Committee on Reactor Physics NEACRP It was the
 first international conference on nuclear data held in Germany with the scientific responsibility entrusted to the Institute of
 Nuclear Chemistry of the Research Centre Jillich The scientific programme was established by the International Programme
 Committee in consultation with the International Advisers and the NEA and IAEA cooperated in the organization A total of
 328 persons from 37 countries and five international organizations participated The scope of these Proceedings extends to a
 wide range of interdisciplinary topics dealing with measurement calculation evaluation and application of nuclear data with
 a major emphasis on numerical data Both energy and non energy related applications are considered and due attention is
 given to some fundamental aspects relevant to the understanding of nuclear data The Dosimetry of Ionizing Radiation
