New Aspects On Tethyan Cretaceous Fossil:

New Aspects on Tethyan Cretaceous Fossil Assemblages H.A. Kollmann, H. Zapfe, 2012-12-06 The geologic term Tethys introduced by Eduard Suess 1893 into science was originally a paleogeographic one. Since its original description it has been used in various ways. One of them is Tethys as a paleo biogeographic concept. This concept was adopted for IGCP Project 262 Tethyan Cretaceous Correlation. It was proposed by G. Czászar and Heinz A. Kollmann and has been approved by the IGCP Board in February 1987. The project has its aims primarily in the improvement of the stratigraphic correlation between the heterogeneous facies of the Tethyan realm. The requests to paleontology in this programme are of various kinds. The delimitation of the Tethyan realm in space and time needs clear statements on the composition of Tethyan faunal or floral assemblages. Biozones based on various fossil groups have to be established for biostratigraphic correlation. Finally Tethyan bioprovinces have to be established. These problems have been discussed in a special meeting of the paleontological group of the project which was held on January 25-27 1988 in Vienna. Papers presented at this meeting are published in this volume.

The Geology of Iberia: A Geodynamic Approach Cecilio Quesada, José Tomás Oliveira, 2019-06-28 Taking a new global approach this unique book provides an updated review of the geology of Iberia and its continental margins from a geodynamic perspective. Owing to its location close to successive plate margins Iberia has played a pivotal role in the geodynamic evolution of the Gondwanan Rheic, Pangea, Tethys and Eurasian plates over the last 600 Ma of Earth's history. The geological record starts with the amalgamation of Gondwana in the Neoproterozoic, succeeded by the rifting and spreading of the Rheic ocean, its demise which led to the amalgamation of Pangea in the late Paleozoic, the rifting and spreading of several arms of the Neotethys ocean in the Mesozoic Era and their ongoing closure which was responsible for the Alpine orogeny. The significant advances in the last 20 years have attracted international research interest in the geology of the Iberian Peninsula. This volume presents the most comprehensive and updated description of the Alpine cycle in Iberia. This volume focuses on the different geological events during the Alpine orogeny as well as the lithological succession. This book is of interest not only for scientists of Portugal and Spain but also for geoscientists searching for analogies for oil and gas as well as tourists visiting the main mountain ridges of Iberia such as the Pyrenees.

North African Cretaceous Carbonate Platform Systems Eulàlia Gili, Mohamed El Hédi Negra, Peter W. Skelton, 2012-12-06 This volume arises from the NATO Advanced Research Workshop ARW on North African Cretaceous rudist and coral formations and their contributions to carbonate platform development which was held in Tunisia on 13-18 May 2002. It was convened by M. El Hedi Negra, Université 7 Novembre de Carthage, now Université de Tunis El Manar, Tunisia, and Eulàlia Gili, Universitat Autònoma de Barcelona, Spain. The aims of the ARW were: 1 to review and critically assess currently available data on rudist coral formations in North African Cretaceous carbonate platforms and their correlations and to integrate these data with other studies around the Mediterranean; 2 to place the findings in a global context, noting both similarities with other regions of

platform development as well as local differences and 3 exploring possible reasons for these and to help promote the creation of a vibrant peri Mediterranean collaborative research community embracing researchers from the entire region to carry forward this ambitious research programme Twenty two presentations oral and poster provided both topical reviews covering rudist evolution and ecology mineralogical changes applications of strontium isotope and graphic correlation methods and platform typology as well as regional syntheses Tunisian reservoirs Moroccan platform history Tunisian platforms and rudist coral facies Algerian platforms and Egyptian platforms Fifteen of these presentations are expanded here as papers The workshop was attended by 24 academic staff 4 geologists from the oil industry plus several observers and students
