Why should we continue to draw by hand when computers and photography can do it for us Freehand drawing is currently enjoying a widespread renaissance In this path breaking study the act of drawing is explored as a way to foster epistemic development and wise thinking skills Drawing exposes the connecting processes of perception by which we make sense of the world creating and using systems of classification which ultimately create boundaries By exploring the relationships between metaphor the mental activity fundamental to language and the coordination of hand and eye essential for drawing such categories can be dissolved through the development of visual intelligence This book discusses approaches to epistemic development in relation to experiential learning citing students descriptions of their encounters with ways of knowing based on value judgments rather than the perceived safety of facts Chapters on prehistoric

cave art and early medieval practices of the art of memory provide further insights into what it means to draw and what a drawing is A chapter on the history of engineering education discusses the narrowing effects of abstract and theoretical approaches to knowledge at the expense of practical skill and experience The study was developed in the setting of a postgraduate industrial design course for engineers at the Royal College of Art London but its concerns and recommendations including a wealth of teaching ideas apply wherever professional practitioners have to make judgments involving conflicting ideas Its insights hint at a deeper role for the university taking postgraduates beyond the narrow instrumentalist training agendas favoured by current government policies to a larger vision of the meaning of professional development
