postwar oil crises including the taking of American hostages in Iran by the Khomeini regime in 1979 and how Vladimir Putin is seeking to turn Russia into a powerful petro state *Energy, the Environment, and Public Opinion* Eric R. A. N. Smith, 2002 Using the state of California as a model Eric Smith explores how much the public understands energy policy what the public wants officials to do about U S energy problems and how governments will cope with energy shortages in the future

The Oil Wars Myth Emily L. Meierding, 2020-05-15 Do countries fight wars for oil Given the resource s exceptional military and economic importance most people assume that states will do anything to obtain it Challenging this conventional wisdom The Oil Wars Myth reveals that countries do not launch major conflicts to acquire petroleum resources Emily Meierding argues that the costs of foreign invasion territorial occupation international retaliation and damage to oil company relations deter even the most powerful countries from initiating classic oil wars Examining a century of interstate violence she demonstrates that at most countries have engaged in mild sparring to advance their petroleum ambitions The Oil Wars Myth elaborates on these findings by reassessing the presumed oil motives for many of the twentieth century s most prominent international conflicts World War II the two American Gulf wars the Iran Iraq War the Falklands Malvinas War and the Chaco War These case studies show that countries have consistently refrained from fighting for oil Meierding also explains why oil war assumptions are so common despite the lack of supporting evidence Since classic oil wars exist at the intersection of need and greed two popular explanations for resource grabs they are unusually easy to believe in The Oil Wars Myth will engage and inform anyone interested in oil war and the narratives that connect them *Overview of Global Energy Security Issues* United States. Oil and the Great Powers Anand Toprani, 2019-04-04 The history of oil is a chapter in the story of Europe s geopolitical decline in the twentieth century During the era of the two world wars a lack of oil constrained Britain and Germany from exerting their considerable economic and military power independently Both nations efforts to restore the independence they had enjoyed during the Age of Coal backfired by inducing strategic over extension which served only to hasten their demise as great powers Having fought World War I with oil imported from the United States Britain was determined to avoid relying upon another great power for its energy needs ever again Even before the Great War had ended Whitehall implemented a strategy of developing alternative sources of oil under British control Britain s key supplier would be the Middle East already a region of vital importance to the British Empire whose oil potential was still unproven As it turned out there was plenty of oil in the Middle East but Italian hostility after 1935 threatened transit through the Mediterranean A shortage of tankers ruled out re routing shipments around Africa forcing Britain to import oil from US controlled sources in the Western Hemisphere and depleting its foreign exchange reserves Even as war loomed in 1939 therefore Britain s quest for independence from the United States had failed Germany was in an even worse position than Britain It could not import oil from overseas in wartime due to the threat of blockade while accumulating

large stockpiles was impossible because of the economic and financial costs. The Third Reich went to war dependent on petroleum synthesized from coal, domestic crude oil, and overland imports primarily from Romania. German leaders were confident, however, that they had enough oil to fight a series of short campaigns that would deliver to them the mastery of Europe. This plan derailed following the victory over France when Britain continued to fight. This left Germany responsible for Europe's oil requirements while cut off from world markets. A looming energy crisis in Axis Europe, the absence of strategic alternatives, and ideological imperatives all compelled Germany in June 1941 to invade the Soviet Union and fulfill the Third Reich's ultimate ambition of becoming a world power, a decision that ultimately sealed its fate. [Insight Turkey / Summer 2022: Embracing Emerging Technologies](#), 2022-11-01

Historically speaking, technology has been one of the main determinants in international politics due to its impact on economic development and warfare. However, lately its preponderance is becoming more inclusive, considering that technologies such as artificial intelligence, AI, Internet of Things, IoT, big data, blockchain, 3D printing, etc. are evolving faster than ever. From the Ukraine-Russia war and the energy crisis to the global economic and social crisis to the deepening great powers rivalry, all point to the importance of emerging technologies. Specifically, technology has become a key asset in the framework of international relations, and the so-called technopolitics, the entanglement of technology with politics, is impacting global affairs at the international and national levels. Primarily, emerging technologies have a transformative impact on the actors of the international order. While the existing Western-led international system had at its core the Westphalian principles with states as the main actors, it is expected that in the close future this will be challenged by the tech giants who are now driving the technological revolution. Considering the state's dependency on tech giants for the development of emerging technologies and the impact of these technologies on economic development and national security, it is understandable that the power of tech giants will increase. So when faced with an international crisis, states and international regional institutions will not be the only actors sitting at the table. Furthermore, the structure and hierarchy of the international system will be shaped by the evolution of technology. Seen both from the economic and military perspectives, the early adoption of these emerging technologies will provide a strategic advantage for the early users, which undoubtedly is directly reflected in the power of states and their position within the existing order. While some states become more successful than others in the production, development, and adoption of these technologies, the hierarchy between states will change as well, leading to a new global order. The ongoing great power competition, especially between the U.S. and China, can be understood within this framework as it would not be wrong to assert that technological competition is the main ground of rivalry. Both states consider technological development as the main asset to achieve their national goal. For the U.S., it is to maintain its leadership in the existing system, while China aims to leapfrog the U.S. and become a superpower. As technology shapes and changes the relations among states, so will other aspects of politics be affected, such as diplomacy and warfare. While the creation and advancement of the Metaverse are

considered to revolutionize diplomacy the application of artificial intelligence in the military is indeed revolutionizing warfare As mentioned previously the proper and quick adoption of these emerging technologies in the political agenda is directly related to the reflection of a state's power in the international system In this context lagging in this technological revolution would be detrimental to a state Türkiye is one of the few states that is not only aware of the benefits of the early adoption of the new technologies but has also taken important steps in this regard Becoming official in 2019 Türkiye has announced its policies called National Technology Initiative and Digital Türkiye Both policies are impacting every sector of life in Türkiye i.e. industry health education defense etc and aim to transform the state's technological future by using its local capacities to produce high tech products As a result Türkiye will gain more economic and technological independence which will place Türkiye among the most technologically developed states in the future To illustrate this point Türkiye's defense industry has been revolutionized within the concept of the National Technology Initiative Henceforth today Türkiye has become one of the leading global actors in terms of the production and use of Unmanned Aerial Vehicles UAVs The impact of the emerging technologies in every aspect of human life is unequivocal however this special issue of Insight Turkey will focus mainly on how technopolitics is shaping the state's policies with a special focus on Türkiye Within this context this issue includes 8 research papers and 5 commentaries all of which offer a novel perspective on the subjects they address Our commentary section features two on topic and three off topic pieces In his inquisitive commentary Richard A Bitzinger seeks to illustrate how the technologies incorporated into the upcoming 4th industrial revolution and AI in particular promise to represent a radical paradigm shift in the form and conduct of combat in the future Bitzinger's analysis makes it clear that these technologies will probably also have a significant influence on international rivalries between large powers aspirational regional actors or governments who view technology as a vital force multiplier This analysis we believe will shed light on how new and emerging critical technologies are challenging the traditional warfighting paradigm as well as how militaries can access and leverage these innovations In our second on topic commentary Bruno Maes challenges readers to consider climate change and its impact on global politics bravely and originally According to Maes we cannot refer to climate change as a byproduct of the Anthropocene the world that humans have created Because of our limited potential to influence natural processes and consequent inability to control the unintended effects of our activities and decisions climate change is still fundamentally a natural phenomenon that humans have only just begun to cause Intriguingly Maes contends that joining the Anthropocene for the first time as opposed to leaving it is the solution to the climate problem Our research articles cover a wide range of topics that are all important to the relationship between technological advancements and global politics In the first paper of the line Erman Akıl launches a stimulating conversation about the future success of the Metaverse which depends according to the author on the creation of universes that are founded on global organizations or regional integrations rather than monopolization Instead of offering quick fixes Akıl poses some tough questions For instance he

raises our attention to unanswered questions regarding state sovereignty in general and the issue of how a state can exercise its sovereign authority in the Metaverse The author also emphasizes the vast prospects that the metaverse offers for nations to engage in cultural diplomacy In line with this the author describes efforts to build the Turkoverse a metaverse based on the Turkic world which would allow for unrestricted movement of people and goods inside the Turkic World while eliminating the physical gap between member states capitals In the upcoming article Javadbay Khalilzade describes how UAVs or combat drones have proliferated and how this has changed and shaped modern warfare The article looks at T rkiye as a manufacturer and active user of UAVs in wars in Africa and the Middle East The case study in the article also looks at Azerbaijan a third tier small state that depends on drone exports but is ambitious enough to use drones to make its presence felt in the region and liberate its lands The article makes the case that drones give militaries a tactical edge improve combat precision and broaden the arsenals available for fighting insurgencies yet drone proliferation also makes states more prone to conflict and compromises regional peace and security In the following research article Nezir Akye ilmen investigates the documents policies strategies measures and organizational structures of T rkiye s national cybersecurity strategy Is T rkiye s cybersecurity strategy properly designed to deal with the new security environment in the hyper anarchic world of cyberspace Following a thorough examination of T rkiye s cybersecurity strengths and weaknesses Akye ilmen responds prudently to this question T rkiye s technical performance is relatively weaker than its legal performance necessitating the development and implementation of a centralized cybersecurity strategy by a large and powerful institution Following Akye ilmen s insightful criticism Ali Burak Dar c l evaluates the Turkish National Intelligence Organization s Mill stihbarat Te kilat M T increasing operational capacity in the context of high technology products Dar c l concludes that M T s domestic technology capabilities have made a significant contribution to T rkiye s counter terrorism activities achievement of regional foreign policy goals deployment of hard power in the field when necessary and efforts to become a proactive actor in the region Then Cenay Babao lu questions how the pandemic process has affected the increasing digitalization of public administrations with the rising use of technology in administrative functions as our focus shifts from security to public administration The author recalls that with support from both supply and demand the COVID 19 pandemic has been a driving force in government digitalization As the author explains following this trend and particularly with the transition to the Presidential Government System in 2018 the Presidency Digital Transformation Office which was established as the coordinator of digital transformation played an important role in T rkiye during the pandemic In what follows Narmina Mamishova examines T rkiye s vaccine diplomacy and its role in the country s efforts to maintain and expand its stakes in the global power configuration Highlighting how since the outbreak of the coronavirus pandemic public health has emerged as a key issue of discourse among states the authors show how T rkiye has managed to consolidate its strength in the international arena through both skillful balancing in terms of vaccine deals and well packaged humanitarian efforts The

author argues that Türkiye has been successful in achieving this through persevering in the pursuit of a proactive comprehensive policy in which the sole standard for a move's legitimacy would be its alignment with the nation's national interests. As we shine a spotlight on the economy in the post COVID-19 era, Bilal Bağış focuses on the ways a new instrument, central bank digital currency, is projected to improve contemporary payment systems, strengthen the effectiveness of the monetary policy, and assure financial stability in the new period. Following the 2008 Crisis and the 2020 Pandemic, as well as innovations such as the all-new cryptocurrencies and stable coins, many central banks have expressed an interest in introducing their own digital money. According to the paper, anticipating that physical currencies will inevitably be digitalized, one way or the other, the author poses a valid question: why not embrace the trend and the new technology, regulate and then make sure digital currencies satisfy all the functions of a regular conventional physical currency? In a similar spirit, in our final research paper, Mehmet R. D. T. makes the prediction that AI will soon overtake humans as the primary decision makers in the energy sector. For the author, making the energy system more flexible and establishing a smart supply system with domestic and renewable energy resources at its core is necessary to prevent any bottlenecks in satisfying the energy demand of all countries, including Türkiye. From our off-topic pieces, Mahmut Z. the Minister of National Education of Türkiye elaborates on the process of universalization from elementary to higher education in Türkiye, describing how it gave priority to areas with comparatively lower rates of schooling by making large investments and carrying out large initiatives. Z. explains how, because of recent changes the nation has undergone in the education sector, Türkiye's educational system has been able to overcome the difficulties it had inherited from the past and has strengthened its capacity to become even more effective and equitable for all pupils. In the following off-topic commentary, Nur İ. Ateşoğlu G. focused on the most recent achievement of Türkiye in bringing the warring sides of Ukraine and Russia to an agreement on the transfer of grain from Ukraine's ports. G. contends that this is a result of Ankara's long-standing sensible approach of maintaining communication with both capitals despite hostilities to maintain access to both. She concludes that the prospect of growing food scarcity conditions and subsequently the projected worldwide crisis appears to have been avoided for the time being thanks to Türkiye's effective mediating performance, which will also be conducive to alleviating the negative conditions caused by the likelihood of food shortages in locations like Egypt, Lebanon, and elsewhere. The political and strategic repercussions of Russia's war against Ukraine are examined by Sabrina P. Ramet and Aleksander Zdravkovski in the final commentary. The authors claim that because of the war in Ukraine, Serbia may now see an opportunity to conclude some unfinished business. Serbia has recently been buying weapons from China and Russia for this purpose, and it has also tried to buy 12 fighter jets from France. The recent armaments buildup by Serbia is unlikely to be for defensive purposes, as the writers draw our attention to the fact that none of Serbia's neighbors or any other states for that matter pose a threat to Serbia. All things considered, we endeavored to explore as many facets as possible of the interplay between new technology

advancements and Turkish technopolitics in the Summer 2022 issue of Insight Turkey We hope and believe that the insightful and stimulating debates raised on the issue will be helpful to our readers *King Energy* Bruce Raphael,2000-05-12 The modern energy industry grew out of the rubble of the Middle Ages and the American Civil War It quickly grew into a bewildering assemblage not only of mines fields pipelines utilities and their overlapping directorates but of public and private policies and intrigues throughout the world one broad enough in scale to rival the most powerful democracies in determining the ultimate fates of nations Its priorities set the stage for the Cold War and the nuclear arms race If the industrys rise to power was unexpected by the traditional establishments of nation and state its crash was equally breathtaking involving actors and players in unexpected locales and venues from backyard inventors to the concrete canyons of Wall Street *King Energy* is the story of the companies and personalities that defined the 20th Century and set the stage for the economic political and social agendas leading up to the new millennium *Oil and American Identity* Sebastian

Herbstreuth,2014-09-10 American dependence on foreign oil has long been described as a serious threat to U S national security and continues to be a political flashpoint even as domestic fracking eases the US reliance on imported energy *Oil and American Identity* offers a fresh perspective on the subject by reframing energy dependency as a cultural discourse with intimate connections to American views on independence freedom consumption abundance progress and American exceptionalism Through a detailed reading of primary literature Sebastian Herbstreuth also shows how the dangers of foreign oil are linked to American descriptions of foreign oil producers as culturally different und thus undependable Herbstreuth shows how even reliable imports from the Middle East are portrayed as dangerous and undesirable because this region is particularly foreign from an American point of view while oil from friendly countries like Canada is cast as a benign form of energy trade *Oil and American Identity* rewrites the history of U S foreign oil dependence as a cultural history of the United States in the 20th century *Energy and Power* Stephen G. Gross,2023 In *Energy and Power* Stephen G Gross offers the first comprehensive history of German energy and climate policy from World War II to the present He shows how debates over energy profoundly shaped the course of German history and influenced the landmark developments that define modern Europe Moving beyond conventional economic theory this book gives a novel explanation for why energy transitions happen Further it provides a powerful lens to move beyond conventional debates on Germany s East West divide or its postwar engagement with the Holocaust to explore how this nation has shaped the contemporary world in other important ways

Energy Kingdoms Jim Krane,2019-01-08 After the discovery of oil in the 1930s the Gulf monarchies Saudi Arabia Kuwait Qatar the United Arab Emirates Oman and Bahrain went from being among the world s poorest and most isolated places to some of its most ostentatiously wealthy To maintain support the ruling sheikhs provide their subjects with boundless cheap energy unwittingly leading to some of the highest consumption rates on earth Today as summertime temperatures set new records the Gulf s rulers find themselves caught in a dilemma can they curb their profligacy without jeopardizing the survival

of some of the world's last absolute monarchies In *Energy Kingdoms* Jim Krane takes readers inside these monarchies to consider their conundrum He traces the history of the Gulf states energy use and policies looking in particular at how energy subsidies have distorted demand Oil exports are the lifeblood of their political economic systems and the basis of their strategic importance but domestic consumption has begun eating into exports while climate change threatens to render their desert region uninhabitable At risk are the sheikhdoms way of life their relations with their Western protectors and their political stability in a chaotic region Backed by rich fieldwork and deep knowledge of the region Krane expertly lays out the hard choices that Gulf leaders face to keep their states viable

Uncertain Allies Klaus Larres, 2021-11-30 The United States has long been conflicted between promoting a united Western Europe in order to strengthen its defense of the West and fearing that a more united Western Europe might not submit to American political and economic leadership The era of wholehearted support for European unity was limited to the immediate postwar era The stances of the past three U S presidents Bush's unilateralism Obama's insistence on leading from behind and Trump's overt hostility toward the European Union were prefigured by Washington's economic and geopolitical strategies of the 1960s and 1970s Concentrating on the policies of Richard Nixon and Henry Kissinger Klaus Larres argues that their years in office were the major turning point when benign hegemony gave way to an attitude toward Europe that was seldom better than lukewarm frequently even outright hostile and that was returned in kind This book offers an unusually clear and comprehensive examination of transatlantic relations during the Nixon era

Nuclear Reactions Mark S. Bell, 2021-04-15 *Nuclear Reactions* analyzes how nuclear weapons change the calculations states make in their foreign policies why they do so and why nuclear weapons have such different effects on the foreign policies of different countries Mark S Bell argues that nuclear weapons are useful for more than deterrence They are leveraged to pursue a wide range of goals in international politics and the nations that acquire them significantly change their foreign policies as a result Closely examining how these effects vary and what those variations have meant in the United States the United Kingdom and South Africa Bell shows that countries are not generically emboldened they change their foreign policies in different ways based on their priorities This has huge policy implications What would Iran do if it were to acquire nuclear weapons Would Japanese policy toward the United States change if Japan were to obtain nuclear weapons And what does the looming threat of nuclear weapons mean for the future of foreign policy Far from being a relic of the Cold War Bell argues nuclear weapons are as important in international politics today as they ever were Thanks to generous funding from the University of Minnesota and its participation in TOME the ebook editions of this book are available as Open Access volumes available from Cornell Open cornellpress.cornell.edu/cornell-open and other repositories

Unnatural Resources Michael Camp, 2019-09-26 *Unnatural Resources* explores the intersection of energy production and environmental regulation in Appalachia after the oil embargo of 1973 The years from 1969 to 1973 saw the passage of a number of laws meant to protect the environment from human destruction and they

initially enjoyed broad public popularity. However, the oil embargo, which caused lines and fistfights at gasoline stations, refocused Americans' attention on economic issues and alerted Americans to the dangers of relying on imported oil. As a drive to increase domestic production of energy gained momentum, it soon appeared that new environmental regulations were inhibiting this initiative. A backlash against environmental regulations helped inaugurate a bipartisan era of market-based thinking in American politics and discredited the idea that the federal government had a constructive role to play in addressing energy issues. This study connects political labor and environmental history to contribute to a growing body of literature on the decline of the New Deal and the rise of pro-market thinking in American politics.
