Marcin ULAM, 1964 **Problems in Modern Mathematics** Stanislaw Marcin Ulam, 1960 **Modern Mathematics** Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

Modern Mathematics Abraham Adolf Fraenkel,1943 *History and Philosophy of Modern Mathematics* William Aspray,Philip Kitcher,1988 History and Philosophy of Modern Mathematics was first published in 1988 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions The fourteen essays in this volume build on the pioneering effort of Garrett Birkhoff professor of mathematics at Harvard University who in 1974 organized a conference of mathematicians and historians of modern mathematics to examine how the two disciplines approach the history of mathematics In History and Philosophy of Modern Mathematics William Aspray and Philip Kitcher bring together distinguished scholars from mathematics history and philosophy to assess the current state of the field Their essays which grow out of a 1985 conference at the University of Minnesota develop the basic premise that mathematical thought needs to be studied from an interdisciplinary perspective The opening essays study issues arising within logic and the foundations of mathematics a traditional area of interest to historians and philosophers The second section examines issues in the history of mathematics

within the framework of established historical periods and questions Next come case studies that illustrate the power of an interdisciplinary approach to the study of mathematics The collection closes with a look at mathematics from a sociohistorical perspective including the way institutions affect what constitutes mathematical knowledge **Teachers Collge Bulletin**
