Quaternion Orders, Quadratic Forms, and Shimura Curves Montserrat Alsina and Pilar Bayer, Shimura curves are a far reaching generalization of the classical modular curves They lie at the crossroads of many areas including complex analysis hyperbolic geometry algebraic geometry algebra and arithmetic This monograph presents Shimura curves from a theoretical and algorithmic perspective The main topics are Shimura curves defined over the rational number field the construction of their fundamental domains and the determination of their complex multiplication points The study of complex multiplication points in Shimura curves leads to the study of families of binary quadratic forms with algebraic coefficients and to their classification by arithmetic Fuchsian groups In this regard the authors develop a theory full of new possibilities that parallels Gauss theory on the classification of binary quadratic forms with integral coefficients by the action of the modular group This is one of the few available books explaining the theory of Shimura curves at the graduate student level Each topic covered in the book begins with a theoretical discussion followed by carefully worked out examples preparing the way for further research Titles in this series are co published with the Centre de

*Arithmetic Geometry* Clay Mathematics Institute. Summer School, 2009 Based on survey lectures given at the 2006 Clay Summer School on Arithmetic Geometry at the Mathematics Institute of the University of Göttingen this title is intended for graduate students and recent PhDs It introduces

readers to modern techniques and conjectures at the interface of number theory and algebraic geometry     WIN -- Women in Numbers Alina Carmen Cojocaru, 2011 This is a collection of papers on number theory which evolved out of the workshop WIN Women In Numbers held November 2-7 2008 It includes articles showcasing outcomes from collaborative research initiated during the workshop as well as survey papers aimed at introducing graduate students and recent PhDs to important research topics in number theory     *Models and Theories in Social Systems* Cristina Flaut, Šárka Hošková-Mayerová, Daniel Flaut, 2018-10-12 This book concisely presents a broad range of models and theories on social systems Because of the huge spectrum of topics involving social systems various issues related to Mathematics Statistics Teaching Social Science and Economics are discussed In an effort to introduce the subject to a wider audience this volume part of the series Studies in Systems Decision and Control equally addresses the needs of mathematicians statisticians sociologists and philosophers The studies examined here are divided into four parts The first part Perusing the Minds Behind Scientific Discoveries traces the winding path of Syamal K Sen and Ravi P Agarwal's scholarship throughout history and most importantly the thought processes that allowed each of them to master their subject The second part covers Theories in Social Systems and the third discusses Models in Social Systems while the fourth and final part is dedicated to Mathematical Methods in the Social Sciences Given its breadth of coverage the book will offer inquisitive readers a valuable point of departure for exploring these rich vast and ever expanding fields of knowledge     **Women in Numbers Europe III** Alina Carmen Cojocaru, Sorina Ionica, Elisa Lorenzo García, 2022-02-01 This volume includes articles spanning several research areas in number theory such as arithmetic geometry algebraic number theory analytic number theory and applications in cryptography and coding theory Most of the articles are the results of collaborations started at the 3rd edition of the Women in Numbers Europe WINE conference between senior and mid level faculty junior faculty postdocs and graduate students The contents of this book should be of interest to graduate students and researchers in number theory     *Computational Methods for Three-Dimensional Microscopy Reconstruction* Gabor T. Herman, Joachim Frank, 2014-01-29 Approaches to the recovery of three dimensional information on a biological object which are often formulated or implemented initially in an intuitive way are concisely described here based on physical models of the object and the image formation process Both three dimensional electron microscopy and X ray tomography can be captured in the same mathematical framework leading to closely related computational approaches but the methodologies differ in detail and hence pose different challenges The editors of this volume Gabor T Herman and Joachim Frank are experts in the respective methodologies and present research at the forefront of biological imaging and structural biology *Computational Methods for Three Dimensional Microscopy Reconstruction* will serve as a useful resource for scholars interested in the development of computational methods for structural biology and cell biology particularly in the area of 3D imaging and modeling     The Geometric and Arithmetic Volume of Shimura Varieties of Orthogonal Type Fritz Hörmann, 2014-11-05 This book outlines a functorial theory of integral

models of mixed Shimura varieties and of their toroidal compactifications for odd primes of good reduction This is the integral version developed in the author's thesis of the theory invented by Deligne and Pink in the rational case In addition the author develops a theory of arithmetic Chern classes of integral automorphic vector bundles with singular metrics using the work of Burgos Kramer and Kühn The main application is calculating arithmetic volumes or heights of Shimura varieties of orthogonal type using Borcherds' famous modular forms with their striking product formula an idea due to Bruinier Burgos Kühn and Kudla This should be seen as an Arakelov analogue of the classical calculation of volumes of orthogonal locally symmetric spaces by Siegel and Weil In the latter theory the volumes are related to special values of normalized Siegel Eisenstein series In this book it is proved that the Arakelov analogues are related to special derivatives of such Eisenstein series This result gives substantial evidence in the direction of Kudla's conjectures in arbitrary dimensions The validity of the full set of conjectures of Kudla in turn would give a conceptual proof and far reaching generalizations of the work of Gross and Zagier on the Birch and Swinnerton-Dyer conjecture Titles in this series are co-published with the Centre de Recherches Mathématiques

**Frobenius Distributions: Lang-Trotter and Sato-Tate Conjectures** David Kohel, Igor Shparlinski, 2016-04-26 This volume contains the proceedings of the Winter School and Workshop on Frobenius Distributions on Curves held from February 17-21, 2014 and February 24-28, 2014 at the Centre International de Rencontres Mathématiques, Marseille, France This volume gives a representative sample of current research and developments in the rapidly developing areas of Frobenius distributions This is mostly driven by two famous conjectures: the Sato-Tate conjecture which has been recently proved for elliptic curves by L Clozel, M Harris and R Taylor and the Lang-Trotter conjecture which is still widely open Investigations in this area are based on a fine mix of algebraic, analytic and computational techniques and the papers contained in this volume give a balanced picture of these approaches

**Locally Mixed Symmetric Spaces** Bruce Hunt, 2021-09-04 What do the classification of algebraic surfaces, Weyl's dimension formula and maximal orders in central simple algebras have in common All are related to a type of manifold called locally mixed symmetric spaces in this book The presentation emphasizes geometric concepts and relations and gives each reader the roter Faden starting from the basics and proceeding towards quite advanced topics which lie at the intersection of differential and algebraic geometry, algebra and topology Avoiding technicalities and assuming only a working knowledge of real Lie groups, the text provides a wealth of examples of symmetric spaces The last two chapters deal with one particular case: Kuga fiber spaces and a generalization, elliptic surfaces, both of which require some knowledge of algebraic geometry Of interest to topologists, differential or algebraic geometers working in areas related to arithmetic groups, the book also offers an introduction to the ideas for non-experts

**Elliptic Boundary Value Problems with Fractional Regularity** Data Alex Amenta, Pascal Auscher, 2018-04-03 A co-publication of the AMS and Centre de Recherches Mathématiques In this monograph the authors study the well-posedness of boundary value problems of Dirichlet and Neumann type for elliptic systems on the upper half space with

coefficients independent of the transversal variable and with boundary data in fractional Hardy Sobolev and Besov spaces The authors use the so called first order approach which uses minimal assumptions on the coefficients and thus allows for complex coefficients and for systems of equations This self contained exposition of the first order approach offers new results with detailed proofs in a clear and accessible way and will become a valuable reference for graduate students and researchers working in partial differential equations and harmonic analysis

*Continuous Symmetries and Integrability of Discrete Equations* Decio Levi, Pavel Winternitz, Ravil I. Yamilov, 2023-01-23 This book on integrable systems and symmetries presents new results on applications of symmetries and integrability techniques to the case of equations defined on the lattice This relatively new field has many applications for example in describing the evolution of crystals and molecular systems defined on lattices and in finding numerical approximations for differential equations preserving their symmetries The book contains three chapters and five appendices The first chapter is an introduction to the general ideas about symmetries lattices differential difference and partial difference equations and Lie point symmetries defined on them Chapter 2 deals with integrable and linearizable systems in two dimensions The authors start from the prototype of integrable and linearizable partial differential equations the Korteweg de Vries and the Burgers equations Then they consider the best known integrable differential difference and partial difference equations Chapter 3 considers generalized symmetries and conserved densities as integrability criteria The appendices provide details which may help the readers understanding of the subjects presented in Chapters 2 and 3 This book is written for PhD students and early researchers both in theoretical physics and in applied mathematics who are interested in the study of symmetries and integrability of difference equations

*Cocycles de groupe pour  $\mathrm{GL}_n$  et arrangements d'hyperplans* Nicolas Bergeron, Pierre Charollois, Luis E. Garcia, 2023-10-16 Ce livre constitue un exposé de taille de la série de cours donnés en 2020 par le Prof Nicolas Bergeron titulaire de la Chaire Aisenstadt au CRM de Montréal L'objet de ce texte est une ample généralisation d'une famille d'identités classiques notamment la formule d'addition de la fonction cotangente ou celle des séries d'Eisenstein Le livre relie ces identités à la cohomologie de certains sous-groupes arithmétiques du groupe linéaire général Il rend explicite ces relations au moyen de la théorie des symboles modulaires de rang supérieur dévoilant finalement un lien concret entre des objets de nature topologique et algébrique This book provides a detailed exposition of the material presented in a series of lectures given in 2020 by Prof Nicolas Bergeron while he held the Aisenstadt Chair at the CRM in Montréal The topic is a broad generalization of certain classical identities such as the addition formulas for the cotangent function and for Eisenstein series The book relates these identities to the cohomology of arithmetic subgroups of the general linear group It shows that the relations can be made explicit using the theory of higher rank modular symbols ultimately unveiling a concrete link between topological and algebraic objects I think that the text *Cocycles de groupe pour  $\mathrm{GL}_n$  et arrangements d'hyperplans* is terrific I like how it begins in a leisurely enticing way with an elementary example that neatly gets to the topic The construction of

these meromorphic function valued modular symbols are fundamental objects and play and will continue to play an important role Barry Mazur Harvard University      *Classification and Identification of Lie Algebras* Libor Šnobl, Pavel

Winternitz, 2017-04-05 The purpose of this book is to serve as a tool for researchers and practitioners who apply Lie algebras and Lie groups to solve problems arising in science and engineering The authors address the problem of expressing a Lie algebra obtained in some arbitrary basis in a more suitable basis in which all essential features of the Lie algebra are directly visible This includes algorithms accomplishing decomposition into a direct sum identification of the radical and the Levi decomposition and the computation of the nilradical and of the Casimir invariants Examples are given for each algorithm For low dimensional Lie algebras this makes it possible to identify the given Lie algebra completely The authors provide a representative list of all Lie algebras of dimension less or equal to 6 together with their important properties including their Casimir invariants The list is ordered in a way to make identification easy using only basis independent properties of the Lie algebras They also describe certain classes of nilpotent and solvable Lie algebras of arbitrary finite dimensions for which complete or partial classification exists and discuss in detail their construction and properties The book is based on material that was previously dispersed in journal articles many of them written by one or both of the authors together with their collaborators The reader of this book should be familiar with Lie algebra theory at an introductory level      *Information*
