Queueing Analysis: Finite systems Hideaki Takagi, 1991 An Introduction to Queueing Systems Sanjay K.

Bose, 2013-12-01 Queueing is an aspect of modern life that we encounter at every step in our daily activities. Whether it happens at the checkout counter in the supermarket or in accessing the Internet, the basic phenomenon of queueing arises whenever a shared facility needs to be accessed for service by a large number of jobs or customers. The study of queueing is important as it provides both a theoretical background to the kind of service that we may expect from such a facility and the way in which the facility itself may be designed to provide some specified grade of service to its customers. Our study of queueing was basically motivated by its use in the study of communication systems and computer networks. The various computers, routers, and switches in such a network may be modelled as individual queues. The whole system may itself be modelled as a queueing network providing the required service to the messages, packets, or cells that need to be carried. Application of queueing theory provides the theoretical framework for the design and study of such networks. The purpose of this book is to support a course on queueing systems at the senior undergraduate or graduate levels. Such a course would then provide the theoretical background on which a subsequent course on the performance modeling and analysis of computer networks may be based. *Finite Difference Methods. Metropolitan Area Networks Marco Pellegrini, Enrico Gregori, Luciano Lenzi, 2012-12-06 With the continuing success of Local Area Networks LANs there is an increasing demand to extend their capabilities towards higher data rates and wider areas This together with the progress in fiber optic technology has given rise to the so called Metropolitan Area Networks MANs MANs can span much greater distances than current LANs and offer data rates on the order of hundreds of Megabits/sec Mbps The success of MANs is mainly due to the opportunity they provide to develop new networking products capable of providing high speed communications between applications at competitive prices which nonetheless give an adequate return on the manufacturers investments A major factor in of appropriate networking standards achieving this goal is the availability Fiber Distributed Data Interface FDDI and Distributed Queue Dual Bus DQDB are the two standard technologies for MANs for which industrial products are already available For this reason this book focuses mainly on these two standards Nowadays there are several books dealing with MANs and these look mainly at FDDI e.g. [2, 92, 118, 141] These books focus primarily on the architectures and protocols whereas they pay little attention to performance analysis Due to the capability of MANs to integrate services a quantitative analysis of the Quality of Service QoS provided by these technologies is a relevant issue and is thus covered in depth in this book
