Random Processes, Communications, and Radar William Milton Brown, Carmen J. Palermo, 1969 Random Processes, Communications, and Radar [by] William M. Brown [and] Carmen J. Palermo William Milton Brown, 1969

Radar Detection Theory of Sliding Window Processes Graham Weinberg, 2017-09-27 Constant false alarm rate detection processes are important in radar signal processing Such detection strategies are used as an alternative to optimal Neyman Pearson based decision rules since they can be implemented as a sliding window process running on a radar range Doppler map This book examines the development of such detectors in a modern framework With a particular focus on high resolution X band maritime surveillance radar recent approaches are outlined and examined Performance is assessed when the detectors are run in real X band radar clutter The book introduces relevant mathematical tools to allow the reader to understand the development and follow its implementation **Detection Estimation and Modulation Theory, Part I**

Harry L. Van Trees, Kristine L. Bell, 2013-04-15 Originally published in 1968 Harry Van Trees's Detection Estimation and Modulation Theory Part I is one of the great time tested classics in the field of signal processing Highly readable and practically organized it is as imperative today for professionals researchers and students in optimum signal processing as it was over thirty years ago The second edition is a thorough revision and expansion almost doubling the size of the first edition and accounting for the new developments thus making it again the most comprehensive and up to date treatment of the subject With a wide range of applications such as radar sonar communications seismology biomedical engineering and radar astronomy among others the important field of detection and estimation has rarely been given such expert treatment as it is here Each chapter includes section summaries realistic examples and a large number of challenging problems that provide excellent study material This volume which is Part I of a set of four volumes is the most important and widely used textbook and professional reference in the field Fundamentals of Strategic Weapons James N. Constant, 2013-12-01 The purpose of this book is to provide graduate students professional engineers military officers and weapons systems planners with a comprehensive grounding in the technology evolution functions costs impacts on society utility and limitations of modern strategic weapons systems Since the subject is often left to the specialists this work should introduce the general reader to the fundamentals of such systems in an informed manner Nowadays the intense interaction of means and ends symbolized by strategic weapons has stimulated a changing discipline in which new missile systems and the intricate logic of nuclear force and counterforce hold the stage alongside the truths of conflict alliances fears games and subtle gains and losses Many readers with new personal interest or public responsibility in this complex field will require an overall guide to it This book will not prepare the reader to become an expert in the vast subject of strategic weapons systems It will however enable him to understand evaluate and form reasonable opinions about these systems their capabilities and effectiveness The subject is dealt with more from the viewpoint of the user investor rather than the architect systems engineer and builder design

engineer While the user will be concerned with both political as well as technical options which may be available to solve a problem the systems and design engineers are concerned with analyzing and building technological weapons devices once their requirements are generally known Information-Theoretic Radar Signal Processing Yujie Gu,Yimin D.

Zhang,2024-11-27 A comprehensive introduction to the emerging research in information theoretic radar signal processing Signal processing plays a pivotal role in radar systems to estimate visualize and leverage useful target information from noisy and distorted radar signals harnessing their spatial characteristics temporal features and Doppler signatures The burgeoning applications of information theory in radar signal processing provide a distinct perspective for tackling diverse challenges including optimized waveform design performance bound analysis robust filtering and target enumeration Information Theoretic Radar Signal Processing provides a comprehensive introduction to radar signal processing from an information theory perspective Covering both fundamental principles and advanced techniques the book facilitates the integration of information theory into radar signal processing broadening the scope and improving the performance Tailored to the needs of researchers and students alike it serves as a valuable resource for comprehending the information theoretic aspects of radar signal processing Information Theoretic Radar Signal Processing readers will also find Presentation of alternative hypotheses in adaptive radar detection Detailed discussion of topics including resource management and power allocation Direction of arrival DOA estimation and integrated sensing and communications ISAC Information Theoretic Radar Signal Processing is ideal for graduate students scientists researchers and engineers who work on the broad scope of radar and sonar applications including target detection estimation imaging tracking and classification using radio frequency ultrasonic and acoustic methods Radar Signal Analysis and Processing Using MATLAB Bassem R. radar related software for the analysis and design of radar waveform and signal processing Radar Signal Analysis and Processing Using MATLAB provides a comprehensive source of theoretical and practical information on radar signals signal analysis and radar signal processing with companion MATLAB code Aft *Understanding Synthetic Aperture Radar Images* Chris Oliver,Shaun Quegan,2004 This practical reference shows SAR system designers and remote sensing specialists how to produce higher quality SAR images using data driven algorithms and apply powerful new techniques to measure and analyze SAR image content **Signal Processing Fundamentals and Applications for Communications and Sensing Systems**

John Minkoff,2002 This cutting edge book is a clear and thorough exposition of signal processing fundamentals for communications and major sensing systems Based on the author's earlier book in this area this revised and expanded resource offers you expert guidance in the detection of optical acoustic and radio frequency signals in noise It covers digital filtering and parameter estimation and helps you with problems associated with radar system design including search tracking and measurement ambiguity **Optimum Array Processing** Harry L. Van Trees,2004-04-07 Well known authority Dr Van Trees updates array signalprocessing for today's technology This is the most up to date and thorough treatment of

the subject available. Written in the same accessible style as Van Tree's earlier classics, this completely new work covers all modern applications of array signal processing from biomedicine to wireless communications.
