$$1. y = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \beta_3 x_3 + u - \text{PRF}$$

$$E(u | x_1, x_2, x_3) = 0$$

$$y = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + v - \text{Researcher's PRF}$$

$$v = \beta_3 x_3 + u$$

We know that when Researcher's PRF is estimated, we get:

$$\hat{y} = \hat{\beta}_0 + \hat{\beta}_1 x_1 + \hat{\beta}_2 x_2$$

Also, we know that:

$$\hat{\beta}_1 = \frac{\sum \hat{r}_{11} y_i}{\sum \hat{r}_{11}^2}$$

$\hat{r}_{11}$ is the OLS residual collected from regression of x_1 on x_2 . We can plug real PRF, $y = \beta_0 + \beta_1 x_1 + \beta_2 x_2 + \beta_3 x_3 + u$, into $\hat{\beta}_1$ function.

$$\hat{\beta}_1 = \frac{\sum \hat{r}_{11} \cdot (\beta_0 + \beta_1 x_1 + \beta_2 x_2 + \beta_3 x_3 + u)}{\sum \hat{r}_{11}^2} = \beta_0 \frac{\sum \hat{r}_{11}}{\sum \hat{r}_{11}^2} + \beta_1 \frac{\sum \hat{r}_{11} x_{11}}{\sum \hat{r}_{11}^2} + \beta_2 \frac{\sum \hat{r}_{11} x_{12}}{\sum \hat{r}_{11}^2} + \beta_3 \frac{\sum \hat{r}_{11} x_{13}}{\sum \hat{r}_{11}^2} + \frac{\sum \hat{r}_{11} u_i}{\sum \hat{r}_{11}^2}$$

From here, we understand that

$$\sum \hat{r}_{11} = 0, \sum \hat{r}_{11} x_{11} = \sum \hat{r}_{11}^2, \text{ and } \sum \hat{r}_{11} x_{12} = 0.$$

So, our $\hat{\beta}_1$ function becomes:

$$\hat{\beta}_1 = \beta_1 + \beta_3 \frac{\sum \hat{r}_{11} x_{13}}{\sum \hat{r}_{11}^2} + \frac{\sum \hat{r}_{11} u_i}{\sum \hat{r}_{11}^2}$$

Now, let's calculate expected value of $\hat{\beta}_1$ conditional on x_1 , x_2 , and x_3 . After that we can check if it is biased or not.

$$E(\hat{\beta}_1) = E(\beta_1) + E\left(\beta_3 \frac{\sum \hat{r}_{11} x_{13}}{\sum \hat{r}_{11}^2}\right) + E\left(\frac{\sum \hat{r}_{11} u_i}{\sum \hat{r}_{11}^2}\right) = \beta_1 + \beta_3 \frac{\sum \hat{r}_{11} x_{13}}{\sum \hat{r}_{11}^2} + \frac{\sum \hat{r}_{11} E(u_i)}{\sum \hat{r}_{11}^2}$$

Based on assumption, $E(u_i) = 0$. Thus,

$$E(\hat{\beta}_1) = \beta_1 + \beta_3 \frac{\sum \hat{r}_{11} x_{13}}{\sum \hat{r}_{11}^2}$$

The bias is: $E(\hat{\beta}_1) - \beta_1$.

Advanced Econometric Methods Thomas B. Fomby, R. Carter Hill, Stanley R. Johnson, 2012-12-06 This book had its conception in 1975 in a friendly tavern near the School of Business and Public Administration at the University of Missouri Columbia Two of the authors Fomby and Hill were graduate students of the third Johnson and were and are concerned about teaching econometrics effectively at the graduate level We decided then to write a book to serve as a comprehensive text for graduate econometrics Generally the material included in the book and its organization have been governed by the question How could the subject be best presented in a graduate class For content this has meant that we have tried to cover all the bases and yet have not attempted to be encyclopedic The intended purpose has also affected the level of mathematical rigor We have tended to prove only those results that are basic and or relatively straightforward Proofs that would demand inordinant amounts of class time have simply been referenced The book is intended for a two semester course and paced to admit more extensive treatment of areas of specific interest to the instructor and students We have great confidence in the ability industry and persistence of graduate students in ferreting out and understanding the omitted proofs and results In the end this is how one gains maturity and a fuller appreciation for the subject in any case It is assumed that the readers of the book will have had an econometric methods course using texts like J Johnston s Econometric Methods 2nd ed

Spatial Econometrics: Methods and Models L. Anselin, 2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists These characteristics may cause standard econometric techniques to become inappropriate In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e g most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis

Balasubramanyam,2021-09-01 There are several textbooks are available in literature in Econometrics but we thought it is really beneficial to students and researchers to have a special textbook on multicollinearity problem in the general linear model The topic of multicollinearity has gained high importance in recent times as the data getting generated is increased enormously Because of this data exploration many variables are representing the same amount of information which leads to the problem of multicollinearity In the current textbook the authors tried to explore the topic of multicollinearity along with the basic definitions and key tests available to detect multicollinearity For all practical application purposes we included a chapter on empirical analysis that will show how the model goes improved through dealing with the problem of multicollinearity This book acts as a textbook reference manual for all students who are studying econometrics at their graduate and post graduate levels and also for research scholars The design of contents is structured in such a way that users find it easy to understand and implement the same in their research works Econometric Analysis Sharif

Hossain,2024-02-08 For the last four decades the uses of econometric tools and techniques irrespective of discipline have been increasing rapidly for solving problems appropriate decision making and policy formulation Generally it is accepted that the study of modern business and economics is incomplete without a proper knowledge of econometric tools and techniques In view of the increasing complexity and variety of problems in business and economics students and researchers may not be able to cope and hence may remain unfamiliar with many aspects of business and economic problems Thus this book was written to explore basic and advanced studies of econometrics for undergraduate and graduate students of business and economics as well as for researchers already engaged in these fields who require an introduction to econometric methods and their application for solving of real life problems The book offers a balanced presentation of fundamental and advanced levels of econometric concepts and methods along with practical examples of their effective application in real life problems

The Econometric Analysis of Time Series Andrew C. Harvey,1990 The Econometric Analysis of Time Series focuses on the statistical aspects of model building with an emphasis on providing an understanding of the main ideas and concepts in econometrics rather than presenting a series of rigorous proofs
