beds and accessing ICU beds in situations of extreme illness Healthcare workers have also faced dramatic consequences such as losing their lives carrying a higher risk of infection compared to the general population and working in high risk environments while mourning for their colleagues and still being obligated to work for extended hours under these conditions Additionally vaccination procedures have been difficult and problematic particularly in developing countries where full coverage has been difficult to achieve This Research Topic aims to cover topics related to the impact and challenges of the pandemic and syndemic on pediatric healthcare focusing on specific areas such as the prehospital system emergency departments ICUs medical branches preventive medicine rehabilitation sports medicine and infection surveillance

Planning the Mexican Economy Jorge Buzaglo, 2024-11-01 The Mexican economy like many other economies in the Third World has grown as the result of a flourishing oil industry One major problem which faces economic development planners in such economies is how to ensure that development in the oil sector leads on to more general development in the rest of the economy Often oil-led development

may induce agricultural stagnation increasing food imports inflation and income concentration Planning the Mexican Economy originally published in 1984 based on original research looks at how this problem has been and might be faced in the Mexican economy It uses econometric modelling to chart the relationship between different sectors of the economy and to show how change in one factor such as income redistribution affects other factors It puts forward and compares different comprehensive development strategies and makes recommendations about the most effective approaches and policies
