Computational Intelligence. Theory and Applications Bernd Reusch,2003-06-30 Ten years of Fuzzy Days in Dortmund What started as a relatively small workshop in 1991 has now become one of the best known smaller conferences on Computational Intelligence in the world It fact it was to my best knowledge the rst conference to use this term in 1994 although I confess that another larger conference was announced rst and the trade mark Computational Intelligence was not coined in Dortmund I believe that the success of this conference is grounded on the quality of its reviewedandinvitedpapersaswellasitsgoodorganization Fromthebeginning we have sent every paper anonymously to ve referees and we have always accepted only around 50% of the papers sent in This year it was a little less than that I would like to thank everybody who helped us by considering Dortmund s Fuzzy Days as the conference at which to appear I know that among the stracts not accepted there were some

quite good ones but we were restricted to a fixed number I also know that referees do a good job but cannot always judge wisely from abstracts Hence my apologies to those who did not make it this year Please try again I would like to point out that our conference also has a good regional reputation I am grateful to the City of Dortmund its Lord Mayor Dr Langemeyer the Dortmund project the DFG Deutsche Forschungsgemeinschaft the KVR Kommunalverband Ruhrgebiet the Martin Schmeier Stiftung and the C line AG Quantum GmbH for their valuable support International Books in Print ,1997

Dependability for Systems with a Partitioned State Space Attila Csenki,2012-12-06 Probabilistic models of technical systems are studied here whose finite state space is partitioned into two or more subsets The systems considered are such that each of those subsets of the state space will correspond to a certain performance level of the system The crudest approach differentiates between working and failed system states only Another more sophisticated approach will differentiate between the various levels of redundancy provided by the system The dependability characteristics examined here are random variables associated with the state space's partitioned structure some typical ones are as follows The sequence of the lengths of the system's working periods The sequences of the times spent by the system at the various performance levels The cumulative time spent by the system in the set of working states during the first m working periods The total cumulative up time of the system until final breakdown The number of repair events during a finite time interval The number of repair events until final system breakdown Any combination of the above These dependability characteristics will be discussed within the Markov and semi Markov frameworks Subject Guide to Books in Print ,1993 Forthcoming Books Rose Arny,2002 *Theory and Applications of Boundary Element Methods* Qinghua Du,Masataka Tanaka,1990 From the Preface The research on BIE BEM in China and Japan had been started almost about the same time in the late seventies A bilateral exchange program for sponsoring the Joint Symposia on BEM between the two countries had been planned in 1985 Then the first Japan China symposium on boundary element methods had been held in Karuizawa Japan June 1-5 1987 The present proceedings volume of this second symposium held in Beijing in October 1988 contains technical papers of BIE BEM from Chinese and Japanese authors on various aspects of BEM *Index of Conference Proceedings* British Library.
