## **Riparian Ecosystem Recovery Strategies And References:**

Riparian Ecosystem Recovery in Arid Lands Mark K. Briggs, 2023-02-07 Riparian ecosystems are declining throughout the southwestern United States where many have disappeared completely yet progress toward checking their decline has been marginal and the results of only a few recovery projects have been evaluated In this guidebook Mark K Briggs has filled this gap in riparian conservation literature Based on his experiences gleaned from evaluating the results of many riparian rehabilitation projects Briggs presents these results in a manner that biologists hydrologists government planners resource managers and other concerned citizens can immediately apply toward developing site specific recovery strategies The book opens with a review of watershed characteristics and an examination of drainage systems then proceeds to determining the causes of riparian decline It introduces five factors that have a significant effect on the results of riparian rehabilitation natural regeneration water availability channel stability direct impacts such as livestock grazing and recreational activities and soil salinity and offers case studies that demonstrate how revegetation has been used both effectively and ineffectively It also discusses strategies other than revegetation that may be effective in improving the ecological condition of a site Many of the strategies presented are also relevant to nonarid climates and to urban areas By emphasizing evaluation of riparian ecosystems so that the causes of degradation can be understood and by offering general approaches that can be tailored to specific situations Riparian Ecosystem Recovery in Arid Lands takes a holistic approach to riparian recovery that will enable users to better judge whether recovery expenditures are likely to produce desired results An unprecedented work it will substantially add to efforts across the Southwest and elsewhere to restore these unique and priceless ecosystems
