*Management* Mirna Jabbour,Jason Crawford,2024-12-02 ERM is considered a dynamic capability that is critical to companies success from strategic and performance perspectives and is increasingly implemented in response to growing pressure from external stakeholders to enact and add legitimacy to existing management control systems However implementing ERM is a challenging process where success is dependent on balancing technical and social factors This book explores the challenges of implementing ERM from technical cognitive and social perspectives to enhance the organisation s capacity to generate and integrate information and knowledge about risk and uncertainty In existing publications ERM implementation is mainly viewed from technical or educational perspectives and treated as formal technical linear processes This book takes a different stance by recognising that implementation depends on formal and informal mechanisms that require a balanced combination of technical and social approaches It changes the paradigm to demonstrate that the implementation of ERM is not a linear process that is similar across industries and organisations but relies on multiple dependencies such as leadership corporate governance and the culture of the organisation This book will be a valuable resource for scholars as well as upper level students across disciplines related to risk management including accounting and finance business and management leadership and organisational studies     *Integrated Assurance* Vicky Kubitscheck,2016-05-23

The need for assurance is never more acute than in times of turbulence and uncertainty The events following the financial market crisis demonstrate the catastrophic consequence of risk taking that exceeds the board s appetite and of not joining up risk intelligence for sound decision making Boards and senior management alike consistently seek the one truth about risk exposures and strength of controls but are continuing to grapple with the challenge Much has been written about assurance and the governance of risks but mainly by those who provide it such as internal auditors accountants and information security technologists for the purpose of advancing their professional practices Less is written for or by those in governance who need assurance for the effective discharge of their responsibilities Regulations do not usually go beyond acknowledging its importance and rely on those in the boardroom to get it right Studies have consistently shown the link between weak corporate governance and

corporate failures The lack of reliable assurance has often been a factor Assurance as an integral part of corporate governance cannot be taken for granted It requires conscious action across the organisation It is time to rethink assurance beyond its usual functional boundaries to focus on what matters to the business and how discussions in the board room can be better supported by more joined up assurance This book provides practical guidance for those who need that support as well as those who deliver assurance
