Health Effects of Mineral Dusts George D. Guthrie, Jr., Brooke T. Mossman, 2018-12-17 Volume 28 of *Reviews in Mineralogy* provides some of the necessary tools for the researcher interested in this area of interdisciplinary research The chapters present several of the important problems concepts and approaches from both the geological and biological ends of the spectrum These two extremes are partially integrated throughout the book by cross referencing between chapters Chapter 1 also presents a general introduction into the ways in which these two areas overlap However many of the areas ripe for the interdisciplinarian will become obvious after reading the various chapters The final chapter of this book discusses some of the regulatory aspects of minerals Ultimately the regulatory arena is where this type of interdisciplinary approach can make an impact and hopefully better communication between all parties will accomplish this goal A glossary is included at the end of this book because the complexity of scientific terms in the two fields can thwart even the most enthusiastic of individuals This volume represents the proceedings of a course by the same title held at Harbor House Resort and

Conference Center on Nantucket Island off the coast of Massachusetts October 22-24 1993 **Silica and Silica Induced Lung Diseases** Vincent Castranova, William E. Wallace, Val Vallyathan, 1995-12-20 This book represents a comprehensive review of current concepts concerning the development, progression and treatment of silica induced lung diseases. The text begins with a complete review of the historical evolution of our understanding of silicosis and a discussion of the clinical and pathological features of this disease. It presents critical questions that must be resolved and then details state of the art experiments that address these problems. The book presents an extensive discussion of new technologies that have increased our understanding of the relationship of surface properties of particulates to their cytotoxicity and pathogenicity. It also presents data that explain the intracellular and intercellular mechanisms involved in the pulmonary response to silica exposure.

Nanotoxicology Nancy A. Monteiro-Riviere, C. Lang Tran, 2007-07-25 Nanomaterials structures with characteristic dimensions between 1 and 100 nm exhibit a variety of unique and tunable chemical and physical properties that have made engineered nanoparticles central components in an array of emerging technologies. The use of nanotechnology is increasing; however, its potential adverse effects on human health are not known.

Comprehensive Toxicology: Toxicology of the respiratory system I. Glenn Sipes, 1997 This volume in the Comprehensive Toxicology series demonstrates how the use of extremely powerful molecular and cell biology techniques has stimulated the growth of toxicology as a scientific discipline. The field of toxicology has evolved from its earlier days of in vivo and descriptive studies to focusing on mechanisms. Frequently, mechanisms require an examination at the cellular and molecular level. Molecular toxicology has opened the door to comprehending the basic mechanisms of how toxicants show their effects. The volume is a comprehensive integrated profile of the molecular effects of toxicants and the molecular mechanisms involved in producing cellular and tissue injury.

Surgical Research: Recent Concepts and Results

Alexander Baethmann, Konrad Messmer, 2012-12-06 Since surgery became a method of treating patients progress in the field has been intimately associated with experimentation and serendipitous research As in other clinical specialties advances in surgery can be considered to result from experimental attempts to increase basic knowledge and to improve technical skills However virtually in no other area do concepts and approaches of experimental research enter clinical routine as fast as in surgery There are numerous examples of this Thus allocation of manpower and resources for surgical research can be considered particularly profitable as convincingly shown for instance in renal transplantation by comparison of the long term burden of hemodialysis vs kidney grafting apart from the relief of suffering and misery Surgery is a continuously spreading field and so is surgical research This volume is a case in point Its spectrum reaches from basic molecular biological aspects of immune mechanisms to the current state of the art of pulmonary surgery of cancer metastases and from the molecular processes of cell swelling in ischemic brain edema and blood brain barrier damage to novel forms of resuscitation or of treatment of insulin dependent diabetes mellitus Surgical research faithfully reflects a constant reorientation of medical disciplines Treatment of renal or gallbladder concretions was a major domain of surgery where the introduction of extracorporeal shock wave treatment now supplies noninvasive virtually conservative alternatives
