Making Doctors An Institutional Apprenticeship:

Making Doctors Simon Sinclair, 2020-08-07 Few outsiders realize that student illness is frequently and ironically a by product of medical training This unique study by a medical doctor and trained anthropologist debunks popular myths of expertise and authority which surround the medical establishment and asks provoking questions about the acquisition and dissemination of knowledge within the field In detailing all levels of basic training in a London medical school the author describes students official activities that is what they need to do to qualify as well as their unofficial ones such as their social life in the bar This insider s expos should prompt a serious reconsideration of abuses in a profession which has a critical influence over untold lives In particular it suggests that the structures and discourses of power need to be re examined in order to provide satisfactory answers to sensitive questions relating to gender and race the dialogue between doctor and patient and the mental stability of students under severe stress

Technologized Images, Technologized Bodies

Jeanette Edwards, Penelope Harvey, Peter Wade, 2010-06-01 The modern world is saturated with images Scientific knowledge of the human body in all its variety is highly dependent on the technological generation of visual data brain and body scans x rays diagrams graphs and charts New technologies afford scientists and medical experts new possibilities for probing and revealing previously invisible and inaccessible areas of the body The existing literature has been successful in mapping the impact and implications of new medical technologies and in marrying the visual and the body but thus far has focused only narrowly on particular kinds of technology or taken only a purely textual visual cultural studies approach to images of the body Combining approaches from three of the most dynamic and popular fields of contemporary social anthropology the study of the visual the study of the technological and the study of the human body this volume draws these together and interrogates their intersection using insights from ethnographic approaches Offering a fascinating and wide range of perspectives the chapters in this volume bring an innovative focus that reflects the authors shared interest in the body and visualising technologies

Identity as a Foundation for Human Resource Development Kate Black, Russell Warhurst, Sandra Corlett, 2017-08-25 Human Resource Development HRD involves the design delivery and evaluation of learning and or training interventions within organisations to improve the work performance of individuals and groups This edited collection will demonstrate the potential of identity theorising for problematizing and reconceptualising HRD activities Identity will thus be established as a foundation for enhancing HRD policy and practice While identity has emerged as a key focus for theoretical debate and for empirical research within management and organisational studies the potential of identity as a new paradigm for understanding learning and for examining HRD more broadly is still emergent That identity has such potential can be seen in the increasing recognition that training and development for many contemporary occupations represents nothing less than a project of the self Identity as a Foundation for Human Resource Development will complete a gap in the market providing sound single source theoretical foundations from the latest trends in identity theorising now a key area of organisation studies and apply these to HRD policy and practice The emphasis throughout will be on informing HRD policy and practice research and education the book includes a chapter on resources and techniques for HRD educators In short the book will put identity to work for HRD scholars The intended audiences are Human Resource Development scholars academics students and professionals this exciting new volume will provide a thoughtful theoretical analysis and operational practise for modern HRD

Reconceiving Medical Ethics Christopher Cowley, 2012-02-09 This volume of original work comprises a modest challenge sometimes direct sometimes implicit to the mainstream Anglo American conception of the discipline of medical ethics It does so not by trying to fill the gaps with exotic minority interest topics but by re examining some of the fundamental assumptions of the familiar philosophical arguments and some of the basic situations that generate the issues The most important such situation is the encounter between the doctor and the suffering patient which forms one of the themes of the book The authors show that concepts such as the body suffering and consent and the role such concepts play within patients lives are much more complicated than the Anglo American mainstream appreciates Some of these concepts have been discussed with subtlety by Continental philosophers like Heidegger Ricoeur and a secondary purpose of the volume is to apply their ideas to medical ethics Designed for upper level undergraduates and graduate students with some philosophical background in ethics Reconceiving Medical Ethics opens up new avenues for discussion in this ever developing field
