Making Humans:

Humans in the Making Michel J. F. Dubois, 2020-12-15 The human specificity can be described by verticality bipedalism technique use articulated language high cognitive capacities complex society at three levels body mind social In this book is proposed an evolutionary process that make better understand how such humanity could have emerged in the long time more than 6 million years The process is based on a very early necessity to use technic for surviving correlated with neoteny which impulsed a darwinian evolutionary process with four distinguished punctuation described as neotenizations [Making Sense of the Future](#) Rick Szostak, 2021-09-02 Making Sense of the Future integrates the latest thinking in Future Studies with the author s expertise in world history economics interdisciplinary studies knowledge organization and political activism The book takes a systems approach that recognizes the complexity of our world It begins by suggesting a set of goals for human societies and identifying innovative strategies for achieving these goals that could gain broad support Each chapter begins with a How to section that discusses how we can identify goals strategies trends surprises or implementation strategies and concludes with an integrative analysis that draws connections across the preceding discussions Taking a cross disciplinary approach Szostak explores key trends and how these interact so that he can develop strategies to guide trends towards desirable futures He discusses the ways in which we can best prepare for surprises such as epidemics and natural disasters enabling us to react to them in beneficial ways Supported by a list of guiding questions and suggestions for class projects this is an accessible textbook for students of Future Studies and Future Studies courses The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Engineering the Human Bert Jaap Koops, Christoph H. Lüthy, Annemiek Nelis, Carla Sieburgh, J.P.M. Jansen, Monika S. Schmid, 2013-02-12 The volume is collection of articles treating the topic of human improvement enhancement from a variety of perspectives philosophical literary medical genetic sociological legal etc The chapters in this volume treat not only those aspects that most immediately come to mind when one thinks of human enhancement such as genetic engineering cloning artificial implants and artificial intelligence etc Somewhat less obvious aspects include evolutionary perspectives in connection with the prolongation of the human lifespan plastic surgery since its beginnings and questions such as whether the distinction between natural and artificial can really be drawn at all and how it has been conceived across the ages or what the legal implications are of recent developments and techniques Many papers make links to the representation of these developments in popular culture from Jules Verne through Aldous Huxley to the movie Gattaca address the hopes and fears that come with them as well as the question how realistic these are While all chapters are written by scientists at the international top of their respective fields all are accessible to a non specialist audience and eminently readable We believe that they represent a state of the art overview of questions that are of interest to a large audience The book thus targets a non specialist audience with an interest in philosophical sociological scientific

and legal issues involved in both traditional and recent matters concerning the desire of mankind to improve itself the human body the human mind and the human condition It is unique in that it brings together all these aspects within a coherent and cohesive collection Trends in Control and Decision-Making for Human-Robot Collaboration Systems Yue Wang,Fumin Zhang,2017-01-24 This book provides an overview of recent research developments in the automation and control of robotic systems that collaborate with humans A measure of human collaboration being necessary for the optimal operation of any robotic system the contributors exploit a broad selection of such systems to demonstrate the importance of the subject particularly where the environment is prone to uncertainty or complexity They show how such human strengths as high level decision making flexibility and dexterity can be combined with robotic precision and ability to perform task repetitively or in a dangerous environment The book focuses on quantitative methods and control design for guaranteed robot performance and balanced human experience from both physical human robot interaction and social human robot interaction Its contributions develop and expand upon material presented at various international conferences They are organized into three parts covering one human one robot collaboration one human multiple robot collaboration and human swarm collaboration Individual topic areas include resource optimization human and robotic safety in collaboration human trust in robot and decision making when collaborating with robots abstraction of swarm systems to make them suitable for human control modeling and control of internal force interactions for collaborative manipulation and the sharing of control between human and automated systems etc Control and decision making algorithms feature prominently in the text importantly within the context of human factors and the constraints they impose Applications such as assistive technology driverless vehicles cooperative mobile robots manufacturing robots and swarm robots are considered Illustrative figures and tables are provided throughout the book Researchers and students working in controls and the interaction of humans and robots will learn new methods for human robot collaboration from this book and will find the cutting edge of the subject described in depth

HUMANS: WHAT WE ARE AND WHY WE EXIST Russell Hvolbek,2019-08-20 This book will help one understand what humans are and whether there is any point or meaning to human existence In terms of natural evolution humans are no more necessary and have no more purpose than an ameba But in terms of our language historical evolution humans must venture themselves beyond the necessities governing biology Since we know we are we must be what we can

Accelerating Entrepreneurial Decision- Making with Hybrid Intelligence Dr. Dominik Dellermann ,2020-02-10 Previous studies revealed that around 75 percent of all start ups fail at an early stage One main reason for this tremendous failure rate is that decision makers are typically confronted with high levels of uncertainty about the viability of their proposed business idea Following this argumentation entrepreneurial decisions can be defined as complex decision making problem under both risk and uncertainty While risk includes quantifiable probabilities uncertainty describes situations where neither outcomes nor their probability distribution can be assessed a priori Consequently the strategic decision making

context is highly complex and contains lots of black swan events that seems to be unpredictable As previous research does not provide any software solutions for decision augmentation in such domains the purpose of this study is to explore the decision making context and then suggest novel and innovative design paradigms and design principles for decision augmentation for strategic decision making

Governmental Automated Decision-Making and Human Rights Stefan Schäferling, 2023-12-07 With the growing capabilities of artificial intelligence governments are integrating AI technologies into administrative and even judicial decision making aiding and in some cases even replacing human decision makers Predictive policing automated benefits administration and automated risk assessment in criminal sentencing are but a few prominent examples of a general trend While the turn towards governmental automated decision making promises to reduce the impact of human biases and produce efficiency gains reducing the human element in governmental decision making also entails significant risks This book analyses these risks through a comparative constitutional law and human rights lens examining US law German law and international human rights law It also highlights the structural challenges that automation poses for legal systems built on the assumption of exclusively human decision making Special attention is paid to the question whether existing law can adequately address the lack of transparency in governmental automated decision making its discriminatory processes and outcomes as well as its fundamental challenge to human agency Building on that analysis it proposes a path towards securing the values of human dignity and agency at the heart of democratic societies and the rule of law in an increasingly automated world This book will be of interest to researchers and scholars focusing on the evolving relationship of law and technology as well as human rights scholars Further it represents a valuable contribution to the debate on the regulation of artificial intelligence and the role human rights can play in that process

Better Humans? Michael Hauskeller, 2014-09-11 Developments in medical science have afforded us the opportunity to improve and enhance the human species in ways unthinkable to previous generations Whether it s making changes to mitochondrial DNA in a human egg being prescribed Prozac or having a facelift our desire to live longer feel better and look good has presented philosophers medical practitioners and policy makers with considerable ethical challenges But what exactly constitutes human improvement What do we mean when we talk of making better humans In this book Michael Hauskeller explores these questions and the ideas of human good that underpin them Posing some challenging questions about the nature of human enhancement he interrogates the logic behind its processes and examines the justifications behind its criteria Questioning common assumptions about what constitutes human improvement Hauskeller asks whether the criteria proposed by its advocates are convincing The book draws on recent research as well as popular representations of human enhancement from advertising to the internet and provides a non technical and accessible survey of the issues for readers and students interested in the ethics and politics of human enhancement

Human preferences and risky choices Petko Kusev, 2012 There are different views on what preferences for risks are and whether they are indicators of stable underlying

generic cognitive systems Preferences could be conceived as an attitude towards a set of properties of context memory and affect a gauge of how much uncertainty one is willing to tolerate This Research Topic aims to initiate a discussion on the stability of preferences for risks as research has shown that different decision domains response modes and framing facilitate preference reversals A consistent claim from behavioural decision researchers is that contrary to the assumptions of classical economics preferences are not stable and inherent constructs in individuals but are modified by levels of accessibility in memory context decision complexity and type of psychological processing e g sampling or computational trade offs in processing For example in a sampling based decision making paradigm it is argued that preferences are not essential for making risky decisions The existing theoretical and empirical evidence reveals that human preferences are relative and unstable undermining the predictions of normative theory Recent theoretical accounts in psychology have expanded the debate further by offering evolutionary models of decision making under risk While most of the researcher has explored optimisation goals traditionally assumed in economics evolutionary psychology has promoted adaptation driven processes for risky choices Moreover we have witnessed a renaissance of preferences as affect rather than as a construct with psycho economical properties Although behavioural decision research is still engaged in challenging the foundation of economic theory at present opinions seem less unified as to whether preferences reflect common psychological constructs The Research Topic will focus on human preferences and risky choices Topics include Normative descriptive and experience based decision making Preference reversals Accessibility in memory Context dependence Psychological processing including i probabilities utilities computations and trade offs and ii sampling Affect and Evolutionary accounts Provided by publisher

Human and Machine Learning Jianlong Zhou, Fang Chen, 2018-06-07 With an evolutionary advancement of Machine Learning ML algorithms a rapid increase of data volumes and a significant improvement of computation powers machine learning becomes hot in different applications However because of the nature of black box in ML methods ML still needs to be interpreted to link human and machine learning for transparency and user acceptance of delivered solutions This edited book addresses such links from the perspectives of visualisation explanation trustworthiness and transparency The book establishes the link between human and machine learning by exploring transparency in machine learning visual explanation of ML processes algorithmic explanation of ML models human cognitive responses in ML based decision making human evaluation of machine learning and domain knowledge in transparent ML applications This is the first book of its kind to systematically understand the current active research activities and outcomes related to human and machine learning The book will not only inspire researchers to passionately develop new algorithms incorporating human for human centred ML algorithms resulting in the overall advancement of ML but also help ML practitioners proactively use ML outputs for informative and trustworthy decision making This book is intended for researchers and practitioners involved with machine learning and its applications The book will especially benefit researchers in areas like artificial intelligence decision support

How Water Makes Us Human Luci Attala, 2019-04-01 This book is about how water becomes people or put another way how people and water flow together and shape each other While the focus of the book is on the relationships held between water and people it also has a broader message about human relationships with the environment generally a message that illustrates not only that people are existentially entangled with the material world but that the materials of the world shape determine and enable humans to be humans in the ways that they are Offering a selection of anthropological examples from Kenya Wales and Spain to illustrate how water's materiality coproductively generates the way people are able to engage with water this book uses cross disciplinary perspectives to provide and promote a new analytic one that encourages ethical holistic and sustainable relationships with the world around us This approach challenges representations that ignore sidestep or are blind to the fleshy materiality of being human and aims to encourage a re imagining of the world that acknowledges humanity as intrinsically active with and part of the fabric of the collection of materials we call planet Earth

Transhumanism and the Image of God Jacob Shatzer, 2019-04-09 Examining the transhumanist movement biblical ethicist Jacob Shatzer grapples with the potential for technology to transform the way we think about what it means to be human Exploring the doctrine of incarnation and topics such as artificial intelligence robotics medical technology and communications tools he guides us into careful consideration of the future of Christian discipleship in a disruptive technological environment

Humans Surekha Davies, 2025-02-04 A history of how humans have created monsters out of each other from our deepest fears and what these monsters tell us about humanity's present and future Monsters are central to how we think about the human condition Join award winning historian of science Dr Surekha Davies as she reveals how people have defined the human in relation to everything from apes to zombies and how they invented race gender and nations along the way With rich evocative storytelling that braids together ancient gods and generative AI Frankenstein's monster and E.T. Humans A Monstrous History shows how monster making is about control it defines who gets to count as normal In an age when corporations increasingly see people as obstacles to profits this book traces the long volatile history of monster making and charts a better path for the future The result is a profound effervescent empowering retelling of the history of the world for anyone who wants to reverse rising inequality and polarization This is not a history of monsters but a history through monsters [The Routledge Handbook of the Ethics of Human Enhancement](#) Fabrice Jotterand, Marcello Ienca, 2023-08-01

The Routledge Handbook of the Ethics of Human Enhancement provides readers with a philosophically rich and scientifically grounded analysis of human enhancement and its ethical implications A landmark in the academic literature the volume covers human enhancement in genetic engineering neuroscience synthetic biology regenerative medicine bioengineering and many other fields The Handbook includes a diverse and multifaceted collection of 30 chapters all appearing here in print for the first time that reveal the fundamental ethical challenges related to human enhancement The chapters have been written by internationally recognized leaders in the field and are organized into seven parts Historical Background and Key Concepts Human Enhancement and Human Nature Physical Enhancement Cognitive Enhancement Mood Enhancement and Moral Enhancement Human Enhancement and Medicine Legal Social and Political Implications The depth and topical range of the Handbook makes it an essential resource for upper level undergraduates graduate students and postdoctoral fellows in a broad variety of disciplinary areas Furthermore it is an authoritative reference for basic scientists philosophers engineers physicians lawyers and other professionals who work on the topic of human enhancement **On Human Nature** Jonathan H. Turner, 2020-11-24

In this book Jonathan H. Turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes Selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats The effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation This shift in turn enabled further selection for a larger brain articulated speech and culture along the

human line Turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture These complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex
