Making Microchips:

Making Microchips Jan Mazurek, 1998-12-07 An examination of the environmental and economic implications of the computer microchip industry's exodus from California's Silicon Valley to New Mexico Virginia Ireland and Taiwan In Making Microchips Jan Mazurek examines the environmental and economic implications of the computer microchip industry's exodus from California's Silicon Valley to New Mexico Virginia Ireland and Taiwan Globalization economic restructuring and changing manufacturing processes in this rapidly growing industry present difficult new questions for environmental policy Mazurek challenges the assumptions of U S policies designed to promote the competitiveness of domestic microchip makers She argues that although these initiatives focus on the economic effects of environmental regulation they fail to acknowledge how economic and organizational changes within the industry collide with and often confound efforts to monitor and manage pollution from chemicals used in microchip manufacturing Despite its reputation as a clean industry microchip manufacturing is fraught with hazards More than sixty dangerous acids solvents caustics and gases are used to make microchips and some of them are suspected to be carcinogens and or reproductive toxins Mazurek describes the environmental by products of chipmaking including soil contamination air and water pollution and damage to human health Applying insights from economic geography to questions of how and where companies organize production she shows how Silicon Valley played a pivotal role in the development of the microchip Pairing federal environmental data with structural and geographic information on the six firms that continue to build wafer fabrication plants in the United States she demonstrates how reorganization and relocation of manufacturing facilities divert attention from trends in toxic emissions and how they complicate public and private efforts to improve the industry's environmental performance In the concluding chapter Mazurek marshals her findings in a broader analysis of the expansion of global manufacturing and the resultant environmental problems

Making Microchips Jan Mazurek, 1999 Mazurek challenges the assumptions of US policies designed to promote the competitiveness of domestic microchip makers arguing that these initiatives fail to acknowledge how economic and organizational changes within the industry collide with and often confound efforts to monitor and manage pollution from chemicals used in microchip manufacturing

Invisible Nature Kenneth Worthy, 2013-08-06 A revolutionary new understanding of the precarious modern human nature relationship and a path to a healthier more sustainable world Amidst all the wondrous luxuries of the modern world smartphones fast intercontinental travel Internet movies fully stocked refrigerators lies an unnerving fact that may be even more disturbing than all the environmental and social costs of our lifestyles The fragmentations of our modern lives our disconnections from nature and from the consequences of our actions make it difficult to follow our own values and ethics so we can no longer be truly ethical beings When we buy a computer or a hamburger our impacts ripple across the globe and dissociated from them we can't quite respond Our personal and professional choices result in damages ranging from radioactive landscapes to disappearing rainforests but we can't quite

see how Environmental scholar Kenneth Worthy traces the broken pathways between consumers and clean room worker illnesses superfund sites in Silicon Valley and massively contaminated landscapes in rural Asian villages His groundbreaking psychologically based explanation confirms that our disconnections make us more destructive and that we must bear witness to nature and our consequences Invisible Nature shows the way forward how we can create more involvement in our own food production more education about how goods are produced and waste is disposed more direct and deliberative democracy and greater contact with the nature that sustains us

India Shaping Its Chip Industry

Ajay Kumar Saini,2024-08-17 India Shaping its Chip Industry delves into the fascinating semiconductor journey that commenced on a promising note in the 1980s Despite that strong beginning the country found itself largely dependent on imports which became painfully evident during the Covid pandemic when global supply chains were disrupted This experience served as a wake up call highlighting the necessity for self sufficiency in critical technologies Recognising that our reliance on foreign nations can have significant implications on both our economic stability and national security the Prime Minister made a committed decision to make India self reliant in the semiconductor sector In response the government has actively revised its national electronics policy to create a conducive environment for growth and innovation in the semiconductor industry Moreover it is investing efforts in developing critical and emerging technologies while forging strategic partnerships with other countries This collaborative approach aims to reboot and reinvigorate the semiconductor landscape in India paving the way for a robust domestic industry The efforts being made today are not merely reactionary but are rooted in a vision for sustainable growth As the fruits of this initiative begin to materialise the future of India s semiconductor industry looks promising and full of potential

Wrecked

Thomas M Nelson,Jerald Podair,2025-08-01 Wrecked links the story of America s most infamous shipwreck to the story of an even larger disaster the wreck of the American industrial economy When the Edmund Fitzgerald went down in a Lake Superior storm on November 10 1975 more was lost than the ship and the twenty nine lives on board The disaster was a human tragedy as well as an indictment of the American industrial policies that eventually cost the nation thousands of jobs and marooned hundreds of communities Written with a passionate yet factually grounded intensity Wrecked shows that the reasons for the decline of industrial manufacturing in the upper Midwest are linked to why the Edmund Fitzgerald sank and to the legal turmoil that followed for the victims families The book conveys the sense of loss that still is felt by those affected along with the outrage over the disappearance of manufacturing jobs and the inadequate maintenance and legal maneuvering over liability for the sinking of the ship What follows is a fascinating critique of what went wrong and why
