Toward Robotic Socially Believable Behaving Systems - Volume I Anna Esposito, Lakhmi C. Jain, 2016-03-21 This volume is a collection of research studies on the modeling of emotions in complex autonomous systems. Several experts in the field are reporting their efforts and reviewing the literature in order to shed light on how the processes of coding and decoding emotional states took place in humans, which are the physiological, physical and psychological variables involved. Invent new mathematical models and algorithms to describe them and motivate these investigations in the light of observable societal changes and needs such as the aging population and the cost of health care services. The consequences are the implementation of emotionally and socially believable machines acting as helpers in domestic spheres where emotions drive behaviors and actions. The contents of the book are highly multidisciplinary since the modeling of emotions in robotic socially believable systems requires a holistic perspective on topics coming from different research domains such as computer science, engineering, sociology, psychology, linguistics and information communication. The book is of interest both to experts and students since last research works on a so complex multidisciplinary topic are described in a neat and didactical scientific language.

The Body Electric James Geary, 2002 Marie a sixty three year old Belgian woman has been totally blind since the age of fifty seven But now thanks to electrodes implanted around her right optic nerve she can see lights shapes and colors again Marie is one of a handful of people around the world who have had computer chips implanted in their bodies to extend enhance or repair their senses The idea of actually melding man and machine still seems futuristic unlikely and a little scary But in *The Body Electric* James Geary examines the startling possibilities opened up by the merger of the biological and the technological This remarkable convergence holds the promise of restoring sight to the blind and mobility to the paralyzed It might also provide us with bionic senses such as the ability to see infrared radiation or feel objects at a distance By linking neurons in the brain directly

to silicon chips scientists are also exploring the possibility of creating virtual eyes ears and limbs on the Internet and allowing people to control appliances by thought alone Machines too are getting silicon senses Researchers are endowing computers with the ability to see hear smell taste touch and conceivably think The Body Electric offers an accessible and astute survey of this exciting area of research with its potential commercial medical and military applications Drawing on fields as diverse as artificial intelligence and biology The Body Electric asks Are you any less you after a bionic implant If all of our senses are electronically enhanced how will we tell the difference between virtual reality and the actual world Will it matter The merger of our technology and ourselves is already beginning to change the way we see hear smell taste touch and think about the world opening the doors of perception just another crack
