The Palgrave Handbook of Economic Performance Analysis Thijs ten Raa, William H. Greene, 2019-12-13 This Handbook takes an econometric approach to the foundations of economic performance analysis The focus is on the measurement of efficiency productivity growth and performance These concepts are commonly measured residually and difficult to quantify in practice In real life applications efficiency and productivity estimates are often quite sensitive to the models used in the performance assessment and the methodological approaches adopted by the analysis The Palgrave Handbook of Performance Analysis discusses the two basic techniques of performance measurement deterministic benchmarking and stochastic benchmarking in detail and addresses the statistical techniques that connect them All chapters include applications and explore topics ranging from the output input ratio to productivity indexes and national statistics

Globalization Ashish Vaidya, 2005-12-19 This work is a comprehensive collection of cutting edge scholarship on the economic international business political legal and environmental ramifications of globalization one of the hottest topics of the day International trade is as old as nations During the last five decades however advances in technology and transportation have changed the scope and method of international trade Disputes rage about the effects of these changes advocates for different positions offer argument but little factual or theoretical analysis

Globalization offers all the information readers need to sort out the arguments. A trader in New York can in a matter of seconds execute a billion-dollar currency transaction in Hong Kong. What does this transaction mean to New Yorkers, to residents of Hong Kong, and to the rest of the world? This book gives readers the tools to answer those questions. *ICT Investment for Energy Use in the Industrial Sectors* Nabaz T. Khayyat, 2017-06-20

This book investigates the impact of production input factors on the market consumer and producer energy demand characteristics in 30 industrial sectors for South Korea over the period 1980-2009 and for Japan over the period 1973-2006, with special emphasis placed on the effects of ICT investment on the demand for energy. A dynamic factor demand model is developed, accounting for the adjustment costs that are defined in terms of forgone output from current production. It addresses four key aspects of production and energy demand in manufacturing: first, it establishes the various relationships between different factors of production; second, it investigates whether the energy demand in the industrial sectors in South Korea would be decreased or increased by substituting complementing with other input factors such as ICT capital and labor; third, it looks at sources of growth in the industrial sectors through decomposing the Divisia index-based total factor productivity (TFP). Finally, it provides appropriate policy recommendations based on these findings. The results of this study may provide industrial sectors stakeholders and environmental and industrial policy makers with a flexible model that has the capacity to assess outcomes of various policies under certain scenarios. The factor demand methodology described in this book is very advanced and up to date. It can be used when teaching advanced graduate courses and in empirically advanced research. Therefore, it is highly relevant in both teaching as a main or supplementary text and in particular as a reference handbook in conducting empirical research. The focus on ICT effects on energy use makes this book an important addition to the existing literature on industrial development.

Cost Structure and the Measurement of Economic Performance Catherine J. Morrison Paul, 2012-12-06. *Cost Structure and the Measurement of Economic Performance* is designed to provide a comprehensive guide for students, researchers, or consultants who wish to model, construct, interpret, and use economic performance measures. The topical emphasis is on productivity growth and its dependence on the cost structure. The methodological focus is on application of the tools of economic analysis, the thinking structure provided by microeconomic theory to measure technological or cost structure and link it with market and regulatory structure. This provides a rich basis for evaluation of economic performance and its determinants. The format of the book stresses topics or questions of interest rather than the theoretical tools for analysis. Traditional productivity growth modeling and measurement practices that result in a productivity residual, often called the measure of our ignorance, are initially overviewed, and then the different aspects of technological, market, and regulatory structure that might underlie this

residual are explored The ultimate goal is to decompose or explain the residual by modeling and measuring a multitude of impacts that determine the economic performance of firms sectors and economies The chapters are organized with three broad goals in mind The first is to introduce the overall ideas involved in economic performance measurement and traditional productivity growth analysis Issues associated with different types of short and long run internal and external cost economies market and regulatory impacts and other general cost efficiencies that might impact these measures are then explored Finally some of the theoretical data construction and econometric tools necessary to justify and implement these models are emphasized

Productivity Issues in Services at the Micro Level Zvi Griliches, Jacques Mairesse, 1993-06-30 7 take advantage of the panel structure of their data to control for possible errors of specification in their models It is interesting to note that the econometric and DEA methods may be closer than some of their respective advocates seem to believe Several of the studies show that the former as well as the latter can be effectively used to assess the relative efficiency of groups of firms or individual firms and one of them explicitly compare results arising from both Fecher et al Econometric techniques can also be nonparametric and applied to estimating cost or production frontiers and not only average functions while ultimately DEA should be amenable to statistical inference Perhaps the most valuable feature of all the analyses is their care and ingenuity in putting together the data measuring variables and pulling out relevant information Many of them are not content with an overall output measure but endeavor to manage with less aggregated measures Nearly all also include in the estimated models a number of auxiliary variables intended to control for specific attributes of outputs inputs or production techniques and other characteristics of firms

Transition Strategies for Sustainable Community Systems Amar KJR Nayak, 2019-01-23 This book presents five critical dimensions on relationships institutions production organisation and governance from design

and systems perspectives for the systematic transition of unstable and vulnerable communities across the world to sustainable community systems. The first section discusses features of relationships and processes to deepen cooperation and trust within a community. The second section examines institutions within and outside a district to foster synergy across institutions within a district and to minimise negative externalities on local communities within a district. The third section deals with food production systems that are nature friendly, resilient, efficient and sustainable. The fourth section discusses the design of producer organisations that can graduate to become sustainable community enterprise systems. The fifth section focuses on community governance that can facilitate decentralised, participatory, transparent and democratic local governance systems. This book offers a fresh perspective on design thinking for optimising internal design consistencies, provides a systems perspective on building sustainable community systems at the lowest governance unit in different countries such as Ward, Gram, Panchayat, Panchayat Council, Gewong, Union, Council, GN, gives insights into design systems perspectives towards building sustainable community systems within a district of any country across the world.

Productivity Growth in Agriculture Keith Owen Fuglie, Sun Ling Wang, V. Eldon Ball, 2012. This volume is written primarily for agricultural economists doing research on productivity. It includes discussions of the theoretical underpinnings of productivity measurement as well as the many practical considerations that go into translating this theory into actual measures of aggregated outputs and inputs. The unifying concept of agricultural productivity used across the chapters of this volume is aggregate total factor productivity (TFP) of the sector. The volume also contains detailed analysis of the underlying causes of agricultural productivity growth. Part I (chapters 2-6) examines agricultural productivity in high income and transition countries. Part II (chapters 7-11) examines agricultural productivity growth and its driving forces in five important agricultural producers in Asia and Latin America. Part III (chapters 12-14) focuses on measuring and identifying constraints to agricultural productivity growth in sub-Saharan Africa. Part IV (chapters 15-16) gives a global perspective on agricultural productivity.

World Development Report 2024 World Bank, 2024-08-01. Middle income countries are in a race against time. Many of them have done well since the 1990s to escape low income levels and eradicate extreme poverty, leading to the perception that the last three decades have been great for development. But the ambition of the more than 100 economies with incomes per capita between US 1,100 and US 14,000 is to reach high income status within the next generation. When assessed against this goal, their record is discouraging. Since the 1970s, income per capita in the median middle income country has stagnated at less than a tenth of the US level. With aging populations, growing protectionism and escalating pressures to speed up the energy transition, today's middle income economies face ever more daunting odds. To become advanced economies despite the growing headwinds, they will have to make miracles. Drawing on the development experience and advances in economic analysis since the 1950s, *World Development Report 2024* identifies pathways for developing economies to avoid the middle income trap. It points to the need for not one but two transitions for those at the middle income level: the first from investment

to infusion and the second from infusion to innovation Governments in lower middle income countries must drop the habit of repeating the same investment driven strategies and work instead to infuse modern technologies and successful business processes from around the world into their economies This requires reshaping large swaths of those economies into globally competitive suppliers of goods and services Upper middle income countries that have mastered infusion can accelerate the shift to innovation not just borrowing ideas from the global frontiers of technology but also beginning to push the frontiers outward This requires restructuring enterprise work and energy use once again with an even greater emphasis on economic freedom social mobility and political contestability Neither transition is automatic The handful of economies that made speedy transitions from middle to high income status have encouraged enterprise by disciplining powerful incumbents developed talent by rewarding merit and capitalized on crises to alter policies and institutions that no longer suit the purposes they were once designed to serve Today s middle income countries will have to do the same *New Developments in Computable General Equilibrium Analysis for Trade Policy* John Gilbert, 2010-10-05 Intends to present the developments in the methodology and practice of CGE techniques as they apply to various issues in international trade policy This title is suitable for academic researchers working in trade policy analysis and applied general equilibrium and advanced graduate students in international economics
