Lynn Margulis Dorion Sagan, 2012-10-19 Tireless controversial and hugely inspirational to those who knew her or encountered her work Lynn Margulis was a scientist whose intellectual energy and interests knew no bounds Best known for her work on the origins of eukaryotic cells the Gaia hypothesis and symbiogenesis as a driving force in evolution her work has forever changed the way we understand life on Earth When Margulis passed away in 2011 she left behind a groundbreaking scientific legacy that spanned decades In this collection Dorion Sagan Margulis's son and longtime collaborator gathers together the voices of friends and colleagues to remark on her life and legacy in essays that cover her early collaboration with James Lovelock her fearless face off with Richard Dawkins during the so called Battle of Balliol at Oxford the intrepid application of her scientific mind to the insistence that 9 11 was a false flag operation her affinity for Emily Dickinson and more Margulis was elected to the National Academy of Sciences in 1983 received the prestigious National Medal of Science in 1999 and her papers are permanently archived at the Library of Congress Less than a month before her untimely death Margulis was named one of the twenty most influential scientists alive one of only two women on this list which include such scientists as Stephen Hawking James Watson and Jane Goodall Although she could be a bulldog her heart was soft and her spirit loving beneath the scientific realpolitik of her conversation and the insistent tough mindedness of her sometimes strident and blunt withering and refreshingly unadorned opinions Dorion Sagan from the introduction

Rebels, Mavericks, and Heretics In Biology William Drietschilo, 2008-10-01 This book is the first devoted to modern biology's innovators and iconoclasts men and women who challenged prevailing notions in their fields Some of these scientists were Nobel Prize winners some were considered cranks or gadflies some were in fact wrong The stories of these stubborn dissenters are individually fascinating Taken together they provide unparalleled insights into the role of dissent and controversy in science and especially the growth of biological thought over the past century Each of the book's nineteen specially commissioned chapters offers a detailed portrait of the intellectual rebellion of a particular scientist working in a major area of biology genetics evolution embryology ecology biochemistry neurobiology and virology as well as others An introduction by the volume's editors and an epilogue by R C Lewontin draw connections among the case studies and illuminate the nonconforming scientist's crucial function of disturbing the comfort of those in the majority By focusing on the dynamics and impact of dissent rather than on winners who are credited with scientific advances the book presents a refreshingly original perspective on the history of the life sciences Scientists featured in this volume Alfred Russel Wallace Hans Driesch Wilhelm Johannsen Raymond Arthur Dart C D Darlington Richard Goldschmidt Barbara McClintock Oswald T

Foreword is to make you the reader hungry for the scientific feast that follows These two volumes on the prokaryotes offer a truly unique scientific menu a comprehensive assembly of articles exhibiting the biochemical depth and remarkable physiological and morphological diversity of prokaryote life The size of the volumes might initially discourage the unprepared mind from being attracted to the study of prokaryote life for this landmark assemblage thoroughly documents the wealth of present knowledge But in confronting the reader with the state of the art the Handbook also defines where new work needs to be done on well studied bacteria as well as on unusual or poorly studied organisms There are basically two ways of doing research with microbes A classical approach is first to define the phenomenon to be studied and then to select the organism accordingly Another way is to choose a specific organism and go where it leads The pursuit of an unusual microbe brings out the latent hunter in all of us The intellectual challenges of the chase frequently test our ingenuity to the limit Sometimes the quarry repeatedly escapes but the final capture is indeed a wonderful experience For many of us these simple rewards are sufficiently gratifying so that we have chosen to spend our scientific lives studying these unusual creatures

Molecular and Cellular Signaling Martin Beckerman, 2006-09-28 Makes connections between diseases drugs and signaling in those chapters not specifically devoted to pathogens Reviews background in first 5 chapters then offers chapters on cancers and apoptosis and on bacteria and viruses Signaling in the immune endocrine hormonal and nervous systems covered along with cancer apoptosis and gene regulation Each chapter ends with a problem section to facilitate discussion
