

Plant Responses

- Phytochrome is a blue-green leaf pigment that alternately exists in two forms
 - Phytochrome red (P_r) is inactive
 - Phytochrome far-red (P_{fr}) is active
- Conversion of forms allows a plant to detect photoperiod changes
- Also promotes seed germination and inhibits stem elongation

Okoh, 1983 *Lectures on Photomorphogenesis* Hans Mohr, 2012-12-06 The discovery of the reversible red far red control of plant growth and development and the subsequent in vivo identification and isolation of the photoreceptor pigment phytochrome constitutes one of the great achievements in modern biology It was primarily a group of investigators at the Plant Industry Station Beltsville Maryland headed by the botanist H A BORTHWICK and the physical chemist S B HENDRICKS who made the basic discoveries and developed a theoretical framework on which the current progress in the field of phytochrome is still largely based While the earlier development of the phytochrome concept has been covered by a number of excellent articles by the original investigators 104 105 33 238 as well as by others who joined the field of phytochrome research later 72 109 219 a comprehensive and up to date treatment of photomorphogenesis is not available at present Since it seems to be needed for teaching as well as for researchers I have tried to summarize the present state of the field reviewing the historical aspects of the phytochrome story only insofar as they are required to understand the present situation The emphasis of my treatment will be on developmental physiology photomorphogenesis rather than on phytochrome per se Biology of Plants Peter H. Photomorphogenesis in Plants and Bacteria Eberhard Schäfer, Ferenc Nagy, 2006-06-11 This unique resource reviews progress made by scientists researching into how ambient changes in the wavelength intensity direction and duration of light environment affect plant growth and development It explains how combinations of new research with classical photobiology and physiology have made it feasible to interpret intriguing light dependent phenomena such as phototropism determination of flowering time shade avoidance etc at molecular level Written by over 20 leading experts in the field the book covers major breakthroughs achieved in the last decade It is generously referenced with more than 2389 bibliographic citations **Plant Growth Regulation** P. Regulated by Light in Horticulture Plants Houcheng Liu, Jung Eek Son, Genhua Niu, Qingming Li, 2024-05-27

Horticultural crop production plays an important role in the global food supply and horticultural plants contain numerous health promoting phytochemicals such as vitamins flavonoids polyphenols and other secondary metabolites The formation of yield and nutritional quality depends on the intrinsic characteristics of horticultural crops and environmental conditions Light is the primary energy source for photosynthesis and light ranging from UV to far red is a critical factor in regulating plant growth morphogenesis development and metabolic processes The physiological and molecular regulation of plant processes is related to the intensity spectrum direction photoperiod and timing of light And light is the most important environmental factor determining the yield and quality of horticultural crops **Annual Plant Reviews, Light and Plant Development**

Garry C. Whitlam, Karen J. Halliday, 2008-04-15 Living organisms are subject to fluctuating environmental conditions Whereas most animals are able to move away from unfavourable conditions plants are sessile and so must cope with whatever comes their way Of all the environmental cues that challenge the developing plant light can probably be considered to be the most important In addition to its key role in plant metabolism and hence almost all life on Earth where it drives the

process of photosynthesis light energy also acts to regulate plant growth and development Light quantity quality direction and diurnal and seasonal duration regulate processes from germination through seedling establishment to the architecture of the mature plant and the transition to reproductive development These developmental responses of plants to light constitute photomorphogenesis This volume is designed to provide the reader with state of the art accounts of our current knowledge of the major classes of higher plant regulatory photoreceptors and the signal transduction networks that comprise plant developmental photobiology Consideration is also given to the ways in which knowledge of plant photoreceptors and their signalling networks can be exploited for instance to improve the quality and productivity of commercially grown plants The book is directed at researchers and professionals working in plant molecular biology plant physiology and plant biochemistry

Carolina Biology Readers J. J. Head, 1977 Structural and Functional Aspects of Phytochemistry V. C. Runeckles, T. C. Tso, 2013-10-22 Recent Advances in Phytochemistry Volume 5 Structural and Functional Aspects of Phytochemistry covers the proceedings of the 10th Symposium of the Phytochemical Society of North America held in Beltsville College Park Maryland on October 6-9 1970 The book discusses the energy conversion in both photooxidation and photophosphorylation reactions of photosynthesis and advances in phytochrome studies including the physiological and biochemical characterization of the pigment the mechanism of action and the regulation of phytochrome mediated processes The text also describes the structure function and photocontrolled synthesis of betalains the chemistry of flavylum salts and the histochemistry of plants in health and disease The enzyme reaction to wound injury and parasites and the evolution of the mechanisms of disease resistance are also considered The book further tackles herbicide metabolism in plants the chemistry of tea and tobacco and the alkaloid biosynthesis of tobacco plants Botanists entomologists and people involved in the study of plant chemistry will find the book invaluable *Photomorphogenesis in plants* R.E. Vreugdenhil, 2012-12-06 The current growing interest of molecular biologists in plant hormone research is undoubtedly the most promising development of recent times Many papers were presented during the 14th International Conference on Plant Growth Substances illustrating the impact of this new approach on our understanding of hormone controlled processes The specific character is the integrated study of plant growth regulation at all levels ranging from single molecules to the entire plant and its functioning in the environment Hormones play an essential role in the regulation but not an exclusive one Other compounds and factors such as Ca^{2+} for instance are often of equal relevance because they may take part in the signal transduction pathway Moreover regulation of the regulator by non hormonal factors is an essential part of any control mechanism The present volume reflects the change in interest from plant growth substances to plant growth regulation
