Developing Principles and Models for Sustainable Forestry in Sweden H. Sverdrup,Ingrid Stjernquist,2013-04-18 In this book is summarized those management principles that should be valid in areas where forests continuously are used for production where biodiversity aspects are important as well as economy and productivity and where demands on soil status and water quality are set Especially the very long term aspects are emphasized and it is shown how system model thinking is used to reach the goals Biogeochemical aspects are put forward as they are very important in areas on poor bedrock with acid soils Forest vitality and stress on trees are treated as well as the importance of wildlife and their effects of browsing The balance between social and recreational demands from the society and the economical needs of the landowner is of great concern Experiences from a special area in South Sweden are presented
