The Structure of Evolutionary Theory Stephen Jay Gould, 2002-03-21 The world's most revered and eloquent interpreter of evolutionary ideas offers here a work of explanatory force unprecedented in our time a landmark publication both for its historical sweep and for its scientific vision With characteristic attention to detail Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism that natural selection works on organisms not genes or species that it is almost exclusively the mechanism of adaptive evolutionary change and that these changes are incremental not drastic Next he examines the three critiques that currently challenge this classic Darwinian edifice that selection operates on multiple levels from the gene to the group that evolution proceeds by a variety of mechanisms not just natural selection and that causes operating at broader scales including catastrophes have figured prominently in the course of evolution Then in a stunning tour de force that will likely stimulate discussion and debate for decades Gould proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought In 2001 the Library of Congress named Stephen Jay Gould one of America's eighty three Living Legends people who embody the quintessentially American ideal of individual creativity conviction dedication and exuberance Each of these qualities finds full expression in this peerless work the likes of which the scientific world has not seen and may not see again for well over a century

Lexical Semantic Gene Structure of Modern Chinese Dan Hu, 2025-07-26 This book draws on genetic theory to explore the microstructure of lexical meaning the operating mechanism of the lexical semantic system and its formal representation and methods for large scale lexical computing resource construction At the theoretical level the basic framework of lexical semantic gene theory is proposed and elaborated In this context a lexical semantic gene is a basic structural unit of lexical meaning that controls a semantic feature of a word and can be inherited and recombined to construct a new word Lexical meaning has multiple dimensions and each dimension is regarded as a semantic feature composed of several lexical semantic genes according to certain semantic relations The generation of new words is the result of the inheritance reorganization and mutation of lexical semantic genes Drawing on this basis the book subsequently explores the techniques of lexical semantic gene extraction and formalized description of lexical semantic genetic structure at the level of engineering technology Bearing in mind the dual needs of formalized representation of semantic computation on the one hand and traditional language teaching research and lexicography on the other the book employs language fact analysis to define strategies methods and operational procedures for a lexical semantic gene depiction meta language system lexical semantic genetic structure analysis and lexical semantic gene extraction At the application level the computational

Evolutionary Principles Peter Calow, 2013-03-14 The last few years have seen a number of new books on evolutionary biology However most of these are either large or specialized This is an attempt to produce a thin general version for undergraduate use Thinness of course demands selectivity and the aim has been to concentrate on the principles of the subject rather than on the details principles that is of both theory and practice Thinness also sometimes means that a certain level of knowledge is assumed in the readership but I hope that this is not the case here and my intention has certainly been to produce something that is as intelligible to the uninitiated as it is to the well informed As for the bibliography I refer where possible to reviews rather than primary sources so a citation should not be taken to imply any sort of precedence In developing the theme I have adopted a loosely historical approach not only because I believe that this makes for more interesting reading but also because the subject like the subject it addresses has evolved under the critical eye of a selective process Problems have been perceived hypotheses have been formulated to explain them facts have been amassed to test the hypotheses more problems have been perceived more hypotheses formulated and so on
