Principles of CASE Tool Integration Alan W. Brown, David J. Carney, Edwin J. Morris, Dennis B. Smith, Paul F. Zarrella, 1994-09-01 Computer Aided Software Engineering CASE tools typically support individual users in the automation of a set of tasks within a software development process Such tools have helped organizations in their efforts to develop better software within budget and time constraints However many organizations are failing to take full advantage of CASE technology as they struggle to make coordinated use of collections of tools often obtained at different times from different vendors This book provides an in depth analysis of the CASE tool integration problem and describes practical approaches that can be used with current CASE technology to help your organization take greater advantage of integrated CASE ,

Methods and Tools for Co-operative and Integrated Design Serge Tichkiewitch, Daniel Brissaud, 2013-03-14 SMC COLOMBIER FONTAINE is a company in the AFE METAL group which uses a sand casting process to manufacture steel primary parts To reduce the time to market primary part producers need to reduce the time and cost of the industrialisation process These factors in addition to the global goal of improving process performance levels brought SMC to develop numerical technologies and traceability from quotation to part delivery 1 Nowadays these improvements are incorporated into company culture The next step in reducing the time and cost of the production process is to introduce a complete methodology of use and experience feedback of these new models and methods To be able to generalise this approach a CAD methodology is essential and thus becomes a step in the industrialisation process. The amount of improvements engendered by the numerical technologies largely justifies the time investment made to obtain a numerical definition of all the different elements in the sand casting process 2 The objective of our approach is to optimise the product and its production process by generating a complete numerical reference through the integration of quotation CAD simulation new manufacturing technologies and effective production processes **Computer-Aided Method Engineering: Designing CASE** Repositories for the 21st Century Dahanayake, Ajantha, 2000-07-01 Computer aided method engineering is about generation and use of information systems design techniques according to user needs Some times such environments are called generic tools or MetaCASE This book presents the methodology and architecture of a CASE repository **Dynamic Modelling of Information Systems** K.M. van Hee, H.G. Sol, 2014-06-28 The use of dynamic models in the development of information systems is regarded by many researchers as a promising issue in design support Modelling the dynamics of information systems is likely to improve the quality and the performance of the design products Dynamic modelling as a new approach for dynamic analysis of problems within an existing situation and design and evaluation of different solution strategies may overcome many difficulties in the design process Advanced Information Systems Engineering Pericles Loucopoulos, 1992-04-29 As humanity approaches the 3rd millennium the sustainability of our present way of life becomes more and more questionable New paradigms for the long term coevolution of nature and civilization are urgently needed in

order to avoid intolerable and irreversible modifications of our planetary environment Earth System Analysis is a new scientific enterprise that tries to perceive the earth as a whole a unique system which is to be analyzed with methods ranging from nonlinear dynamics to macroeconomic modelling This book resulting from an international symposium organized by the Potsdam Institute has 2 aims first to integrate contributions from leading researchers and scholars from around the world to provide a multifaceted perspective of what Earth System Analysis is all about and second to outline the scope of the scientific challenge and elaborate the general formalism for a well defined transdisciplinary discourse on this most fascinating issue

Guide to the Software Engineering Body of Knowledge Alain Abran, James W. Moore, 2004 The purpose of the Guide to the Software Engineering Body of Knowledge is to provide a validated classification of the bounds of the software engineering discipline and topical access that will support this discipline The Body of Knowledge is subdivided into ten software engineering Knowledge Areas KA that differentiate among the various important concepts allowing readers to find their way quickly to subjects of interest Upon finding a subject readers are referred to key papers or book chapters Emphases on engineering practice lead the Guide toward a strong relationship with the normative literature The normative literature is validated by consensus formed among practitioners and is concentrated in standards and related documents The two major standards bodies for software engineering IEEE Computer Society Software and Systems Engineering Standards Committee and ISO IEC JTC1 SC7 are represented in the project The Practice of International and National Courts and the (De-)Fragmentation of International Law Ole Kristian Fauchald, André Nollkaemper, 2014-10-01 In recent decades there has been a considerable growth in the activities of international tribunals and the establishment of new tribunals Furthermore supervisory bodies established to control compliance with treaty obligations have adopted decisions in an increasing number of cases National courts further add to the practice of adjudication of claims based on international law While this increasing practice of courts and supervisory bodies strengthens the adjudicatory process in international law it also poses challenges to the unity of international law Most of these courts operate within their own special regime functional regional or national and will primarily interpret and apply international law within the framework of that particular regime The role of domestic courts poses special challenges as the powers of such courts to give effect to international law as well as their actual practice in applying such law largely will be determined by national law At the same time both international and national courts have recognised that they do not operate in isolation from the larger international legal system and have found various ways to counteract the process of fragmentation that may result from their jurisdictional limitations This book explores how international and national courts can and do mitigate fragmentation of international law It contains case studies from international regimes including the WTO the IMF investment arbitration and the ECtHR and from various national jurisdictions including Japan Norway Switzerland and the UK providing a basis for conclusions to be drawn in the final The Interpretation and Application of the European Convention of Human Rights Malgosia Fitzmaurice, Panos chapter

Merkouris, 2012-11-30 In The Interpretation and Application of the European Convention of Human Rights Legal and Practical Implications the aim is to offer a two pronged approach on the effect that the ECHR has in the field of human rights as well as in other areas of international law The first part explores general and theoretical aspects of the application of the ECHR such as provisional application norm conflict resolution the interplay between human rights and occupation law The second Part building on the research and conclusions of the first Part examines the amphidromous relationship of the ECHR with other areas of law Since no branch of international law exists in clinical isolation this Part analyses the effects that the ECHR has on and is recipient of from a variety of diverse areas of law such as law of the sea investment law and rights of indigenous peoples Advanced Information Systems Engineering Workshops Camille Salinesi, Oscar Pastor, 2011-06-17 This book constitutes the thoroughly refereed proceedings of ten international workshops held in London UK in conjunction with the 23rd International Conference on Advanced Information Systems Engineering CAiSE 2011 in June 2011 The 59 revised papers were carefully selected from 139 submissions.
