Principles Of Environmental Science And Technology Second Revised Edition 33:

Environmental Science Theory W.T. de Groot, 1992-10-22 Having no competitive works this unique publication presents a single structure for the analysis explanation and solution of environmental problems regardless of their location nature or scale In this problem oriented approach a coherent framework interconnects the study of facts and values environmental systems social causes and ethical premises Counterbalancing current biases the author emphasizes the fundamental normative economic and social scientific aspects of truly interdisciplinary environmental science For instance the normative side of environmental problems are often neglected resulting in policy designs and evaluations containing inefficient mixtures of sophisticated models and poorly grounded normative premises this is the first major study to enrich the field with more normative consistency and groundedness It is also the first text to consistently identify the social causes of environmental problems rather than focusing on the physical scientific aspects and thus design deeper and more effective policies Furthermore a tinge of post modern thinking runs throughout the book with special care being taken however to constantly keep in view the practical relevance of theory for problem oriented work The book will be of interest to environmental scientists and managers wishing to improve the consistency and depth of their work to social scientists and geographers wishing to connect their discipline to the environmental problems field and to general scientists interested in the connections between philosophy and practice Environmental Oriented Electrochemistry C.A.C. Sequeira, 1994-06-06

This book concentrates on the electrochemistry environment relationship including among others chapters on design and operation of electrochemical reactors and separators process simulation development and scale up optimization and control of electrochemical processes applied to environmental problems also including economic analysis description of unique current and future applications in addition to basic research into developing new technologies It is hoped that this volume will be considered interesting and extremely timely to specialists in electrochemistry and environmental sciences

Helsel, R.M. Hirsch, 1993-03-03 Data on water quality and other environmental issues are being collected at an ever increasing rate In the past however the techniques used by scientists to interpret this data have not progressed as quickly This is a book of modern statistical methods for analysis of practical problems in water quality and water resources The last fifteen years have seen major advances in the fields of exploratory data analysis EDA and robust statistical methods The real life characteristics of environmental data tend to drive analysis towards the use of these methods These advances are presented in a practical and relevant format Alternate methods are compared highlighting the strengths and weaknesses of each as applied to environmental data Techniques for trend analysis and dealing with water below the detection limit are topics covered which are of great interest to consultants in water quality and hydrology scientists in state provincial and federal water resources

and geological survey agencies The practising water resources scientist will find the worked examples using actual field data from case studies of environmental problems of real value Exercises at the end of each chapter enable the mechanics of the methodological process to be fully understood with data sets included on diskette for easy use The result is a book that is both up to date and immediately relevant to ongoing work in the environmental and water sciences **Global**

Wise,1997-07-23 Environmental biotechnology is an emerging field of scientific and technological investigations that is truly global Popular recognition is high for the environmental problems being faced and solved by biotechnology methods This book presents selected papers from the 3rd International Symposium of the International Society for Environmental Biotechnology held in Boston in July 1996 The following topics are covered metals mine drainage removal and toxicity waste treatment monitoring bioremediation water quality biodegradation and local national and international issues in biotechnology **Handbook of Radioactive Contamination and Decontamination** J. Severa,J. Bár,1991-12-04 The objective of this book is to present a comprehensive picture first of the fundamentals of general contamination of solid surfaces and water and in the second part to review the main practical procedures and means of applied decontamination used in the fields of activity The most emphasis on radioactive contamination deals with decontamination of the operational facilities in nuclear power plants Other special decontamination branches of current interest are also dealt with briefly The art of decontamination is being enriched by the progress achieved in relevant scientific disciplines and employs these relative advances The current volume discusses in detail the following trends in decontamination Firstly the development and use of new decontamination methods that are highly efficient non aggressive to decontaminated materials and economically feasible secondly the utilization of progressive elements of automation and robotics thirdly the development and use of such decontamination formulations that would minimize the volume of wastes and would produce wastes in a form in which they could be either easily further treated or safely disposed of without risk to human health or the environment finally the choice of suitable materials used both for the structural and the technological parts of nuclear installations with regard to their minimal contaminability and ease of decontamination Environmental Biotechnology A. Blažej,V. Prívarová,1991-06-06 The growing awareness of environmental problems provided the stimulus for this 4th International Symposium on Biotechnology Interbiotech 90 to address many aspects of the relationship between biotechnology and the environment The papers are mainly devoted to the contribution of biotechnology in solving environmental problems including biological waste water treatment utilization of municipal sewage sludge detoxification of polluted soil and complex utilization of lignocellulosic wastes There is examination of possible dangers in such cases as the release of r DNA organisms into the environment The relationship of biotechnology and energy e g biogas landfill gas fuel photosynthetic systems for fuel production is also discussed Applied Isotope Hydrogeology F.J. Pearson,W. Balderer,H.H. Loosli,B.E. Lehmann,A. Matter,T. Peters,H. Schmassmann,Roland U Gautschi,1991-04-16 In 1980 Nagra the Swiss National

Cooperative for the Storage of Radioactive Waste began a comprehensive field investigation programme to assess the feasibility and safety of a repository for the final disposal of high level radioactive waste in northern Switzerland. An international team of scientists has carried out a comprehensive study on the isotope hydrogeology of deep groundwaters. One of the major implications of this work pertains to the storage of radioactive waste. The study goes far beyond an in depth regional study as it draws together the results of diverse techniques many of which have been re evaluated or further developed. This book presents in great detail the results of one of the most comprehensive isotope hydrology studies ever undertaken.

This book the result of studies undertaken on behalf of the European Commission examines the current state of the art techniques for the restoration of despoiled lands arising from the coal and steel industries. The chapters are fully cross referenced in the text and where more technical or specific detail is provided this has been placed into boxes rather than in the main text. The book will be of great interest to environmental scientists and engineers and to all those who are involved in mining, mineral waste, soil pollution and waste management and disposal.

Acidification Research: Evaluation and Policy Applications T. Schneider, 1992-04-24

A large number of nationwide research programmes in the field of acidification have been carried out in the last decade. Especially in Western Europe extensive programmes have resulted in a good overview of all the effects mostly negative caused by acidifying substances. There is now consensus that types of acidification damage relate to the unique geography of an area: air pollution affects vegetation, acid aerosol the ozone layer. New in this volume is the relation between scientific results of integrated research programmes and policy actions to prevent, reduce and limit the widespread damage caused by acidification. The results of many different national research programmes are evaluated and compared to present a unique compilation for the research scientist and policy maker. In this volume thematic reviews on specific topics of acidification research are presented followed by overviews of acidification policy plans and actual abatement plans. The result is the best review of acidification research carried out worldwide during the last decade and presentation of the critical relation between research results and policy actions.
