The Complete Technology Book on Printing Inks
NIIR Board, 2003-01-02 The beginning of ink making is something of a mystery. It is certain, however, that the development of the art of writing preceded the invention of ink by almost a thousand years. Today inks are divided into two classes: printing inks and writing inks. Printing is a process for reproducing text and images, typically with ink on paper, using a printing press. It is often carried out as a large-scale industrial process and is an essential part of publishing and transaction printing. Different techniques and printing equipments are employed for each printing practice. The demand for innovative printing practices has been on a high in recent times. There are various kinds of printing processes: lithographic process, the gravure process, offset printing process, etc. Different types of inks derived from different processes are ball pen inks, bleachable inks, fluorescent inks, fast-drying ink, automatic press inks, rotary press inks, coated paper inks, planographic inks, lithographic inks, offset tin printing inks, etc. The printing ink industries have grown significantly during the last decade, and this industry is characterized by exceeding high margin profit.
