**Essentials of Real Estate Economics** Dennis J. McKenzie, Richard M. Betts, 2001 Completely updated and one of the most direct and practical approaches to presenting the factors that cause real estate value to change McKenzie and Betts have updated the fourth edition while adding graphics and coverage of contemporary topics This text works well for individuals with little or no background in formal economics providing current information needed for a successful course in real estate economics for real estate agents appraisers and investors Economics, Real Estate and the Supply of Land Alan W. Evans, 2008-04-30 The book draws together the economic literature relating to the supply of land for development The standard view appears to be that the owners of land have no interest other than to allow their land to be used for the activity which would yield the highest income But in reality this is not so and the book's aim is to demonstrate this to set out the reasons and to show the economic effects of the fact that landowners have other motives The book covers the supply of land for urban development and shows how land has characteristics which differentiate it from other factors of production which will also affect its supply for some uses e.g. land is fixed in location and its price and value are inseparable from where it is New light is cast on the market for land by concentrating on the supply side and on land use planning by taking an economic viewpoint **Essentials of Real Estate Economics** Richard M. Economics Ernie Jowsey, 2011-04-01 Real Estate Economics explains the most important issues in UK and international real estate in terms of applied economics. It includes examples and data from property markets around the world, summaries of recent research in real estate issues and up to date graphs and tables to explain the economics of land and property. Written by an experienced lecturer, this book is ideal for introductory courses on real estate land and property, construction, housing, planning and applied economics and includes a wide range of topical real estate subjects such as the cyclical nature of real estate markets and the credit crunch, green building and energy performance certificates and the development of brownfield and contaminated land. Empirical data to illustrate concepts in the form of tables or graphs, boxed examples throughout, a full pedagogical framework including learning outcomes, chapter summaries and questions for review in each chapter, up to date presentation and analysis of issues related to the recent global recession. *Real Estate Economics* Nicholas G. Pirounakis, 2013 Real Estate Economics A point to point handbook introduces the main tools and concepts of real estate RE economics. It covers areas such as the relation between RE and the macro economy, RE finance, investment, appraisal, taxation, demand and supply, development, market dynamics and price bubbles and price estimation. It balances housing economics with commercial property economics and pays particular attention to the issue of property dynamics and bubbles, something very topical in the aftermath of the US house price collapse that precipitated the global crisis of 2008. This textbook takes an international approach and introduces the student to the necessary toolbox of models required in order to properly understand the mechanics of real estate. It combines theory, technique, real life cases and practical examples so that in the end the student is able to read and understand most RE papers published in peer reviewed journals, make sense of the RE market or markets and contribute positively to the preparation of economic analyses of RE assets and markets soon after joining any company or other organization involved in RE investing, appraisal, management, policy or research. This book should be particularly useful to third year students of economics who may take up RE or urban economics as an optional course, to postgraduate economics students who want to specialize in RE economics, to graduates in management, business administration, civil engineering, planning and law who are interested in RE as well as to RE practitioners and to students reading for RE related professional qualifications.
