Robots Look Inside:

A Neuroscientist Looks At Robots Donald W Pfaff,2015-10-28 The book written for a general educated public compares the most important elements of the human nervous system to the corresponding capacities of robots Crucial are the areas of activities for which the constraints limiting human and robot performances are much different Those areas offer opportunities for synergies The book argues that we now understand mechanisms for emotional feelings in the human brain so well that we will be able to program robots to act as though they also have emotion Written in a clear and open fashion by an expert neuroscientist the book will appeal to interested lay readers in addition to neuroscientists and computer scientists

Gaze in Human-Robot Communication Frank Broz,Hagen Lehmann,Bilge Mutlu,Yukiko Nakano,2015-12-15 Gaze in Human Robot Communication is a volume collecting recent research studying gaze behaviour in human robot interaction HRI The selected articles draw inspiration from related research into gaze in human human interaction in fields ranging from ethnography to neuroscience The major themes of these articles include the experimental investigation of human responses to robot gaze the investigation of the impact of coordinating gaze acts with speech and the development of hardware and software technologies for enabling robot gaze This volume provides an excellent introduction to the depth and breadth of this growing research area in HRI The highly interdisciplinary nature of the work presented should make it of interest both to robotics researchers and to researchers from other fields with an interest in the role of gaze in communication Originally published in Interaction Studies Vol 14 3 2013

Anatomy of a Robot Despina Kakoudaki,2014-07-07 Why do we find artificial people fascinating Drawing from a rich fictional and cinematic tradition Anatomy of a Robot explores the political and textual implications of our perennial projections of humanity onto figures such as robots androids cyborgs and automata In an engaging sophisticated and accessible presentation Despina Kakoudaki argues that in their narrative and cultural deployment artificial people demarcate what it means to be human They perform this function by offering us a non human version of ourselves as a site of investigation Artificial people teach us that being human being a person or a self is a constant process and often a matter of legal philosophical and political struggle By

analyzing a wide range of literary texts and films including episodes from Twilight Zone the fiction of Philip K Dick Kazuo Ishiguro s novel Never Let Me Go Metropolis The Golem Frankenstein The Terminator Iron Man Blade Runner and I Robot and going back to alchemy and to Aristotle s Physics and De Anima she tracks four foundational narrative elements in this centuries old discourse the fantasy of the artificial birth the fantasy of the mechanical body the tendency to represent artificial people as slaves and the interpretation of artificiality as an existential trope What unifies these investigations is the return of all four elements to the question of what constitutes the human This focused approach to the topic of the artificial constructed or mechanical person allows us to reconsider the creation of artificial life By focusing on their historical provenance and textual versatility Kakoudaki elucidates artificial people s main cultural function which is the political and existential negotiation of what it means to be a person Distributed Computing by Mobile Entities Paola

Flocchini,Giuseppe Prencipe,Nicola Santoro,2019-01-12 Distributed Computing by Mobile Entities is concerned with the study of the computational and complexity issues arising in systems of decentralized computational entities operating in a spatial universe Encompassing and modeling a large variety of application environments and systems from robotic swarms to networks of mobile sensors from software mobile agents in communication networks to crawlers and viruses on the web the theoretical research in this area intersects distributed computing with the fields of computational geometry especially for continuous spaces control theory graph theory and combinatorics especially for discrete spaces The research focus is on determining what tasks can be performed by the entities under what conditions and at what cost In particular the central question is to determine what minimal hypotheses allow a given problem to be solved This book is based on the lectures and tutorial presented at the research meeting on Moving and Computing mac held at La Maddalena Island in June 2017 Greatly expanded revised and updated each of the lectures forms an individual Chapter Together they provide a map of the current knowledge about the boundaries of distributed computing by mobile entities **The Coming Age of Robots** George
