The Evolutionary Mechanism of Human

Dysfunctional Behavior Ivan Fuchs, 2019-04-18 Why is humanity by far the most successful animal in the animal kingdom but when it comes to survival of the fittest we pull against the impulse toward natural selection Unique among vertebrates humans develop and practice varied forms of dysfunctional or maladaptive behavior the graver of which are categorized as mental disorders which doesn't sustain our species Dr Ivan Fuchs explains why this is the case setting his discussion within the fields of psychiatry evolutionary biology and genetics marshalling a wide range research to make a compelling case In this work Dr Ivan Fuchs provides his theory on human dysfunctional behavior rooted in Darwinian evolutionary thinking His theory includes 1 An attempt to identify the basic evolutionary mechanism that leads to dysfunctional or maladaptive behavior that is increasing in human populations He proposes that this mechanism consists of progressive relaxation of selection pressures originating in the natural environment as a result of the technological and cultural development in human civilization These developments protect against many natural inconveniences and dangers such as harmful weather conditions scarce or unreliable food supplies cruel even deadly competition for life sustaining or reproductive resources danger of predation and so on The relaxation of natural selection pressures leads to excessive diversification of innate predispositions that due to the complexities of social coexistence has both far reaching beneficial as well as harmful consequences 2 Dr Fuchs deals primarily with severe forms of dysfunctional behavior categorized as mental disorders pinpointing those genetically based behavioral complexes which predispose humans to anxiety affective and personality disorders paranoia and schizophrenia 3 Dr Fuchs also makes clear that the above innate predispositions cannot lead by themselves to the whole clinical picture of diagnosable mental disorder categories In order for full blown clinical symptomatology to develop the innate predisposition has to interact with influences after childbirth first of all learning Consequently psychiatric understanding and research has to distinguish sharply between those mental brain structures and functions which constitute the innate predisposition to a certain mental disorder versus those ones involved secondarily during the lifespan This consideration is detailed in the case of schizophrenia spectrum of disorders The above theoretical considerations have important therapeutic preventive and research implications

Bettinger, 2013-11-11 Hunter gatherers are the quintessential anthropological topic. They constitute the subject matter that in the last instance separates anthropology from its sister social science disciplines: psychology, sociology, economics, and political science. In that central position, hunter gatherers are the acid test to which any reasonably comprehensive anthropological theory must be applied. Several such theories, some narrow, some broad, are examined in light of the hunter gatherer case in this book. My purpose then is that of a review of ideas rather than of a literature. I do not probably could not survey all that has been written about hunter gatherers. Many more works are ignored than considered. That is not because the ones ignored are uninteresting but because it is my broader purpose to concentrate on certain theoretical contributions to anthropology in which hunter gatherers figure most prominently. The book begins with two chapters that deal with the history of anthropological research and theory in relation to hunter gatherers. The point is not to present a comprehensive or even handed accounting of developments. Rather I sketch a history of selected ideas that have determined the manner in which social scientists have viewed and thus studied hunter gatherers. This lays the groundwork for subjects subsequently addressed and establishes two fundamental points. First, the social sciences have always portrayed hunter gatherers in ways that serve their theories. In short, hunter gatherer research has always been a theoretical enterprise. Second, these theoretical treatments have generally been either evolutionary or materialist or both in perspective. Human Paleontology and

Prehistory Assaf Marom, Erella Hovers, 2017-01-24 The aim of the book is to present original and though provoking essays in human paleontology and prehistory which are at the forefront of human evolutionary research in honor of Professor Yoel Rak, a leading scholar in paleoanthropology. The volume presents a collection of original papers contributed by many of Yoel's friends and colleagues from all over the globe. Contributions from experts around the globe fall roughly into three broad categories. Reflections on some of the broad theoretical questions of evolution and especially about human evolution, the early hominins with special emphasis on *Australopithecus afarensis* and *Paranthropus* and the Neanderthals, that contentious group of our closest extinct relatives. Within and across these categories, nearly every paper addresses combinations of methodological, analytical, and theoretical questions that are pertinent to the whole human evolutionary time span. This book will appeal most to scholars and advanced students in paleoanthropology, human paleontology, and prehistoric archaeology.

Human Evolutionary Biology Michael P. Muehlenbein, 2010-07-29 Wide ranging and inclusive, this text provides an invaluable review of an expansive selection of topics in human evolution, variation, and adaptability for professionals and students in biological anthropology, evolutionary biology, medical sciences, and psychology. The chapters are organized around four broad themes, with sections devoted to phenotypic and genetic variation within and between human populations, reproductive physiology and behavior, growth and development, and human health from evolutionary and ecological perspectives. An introductory section provides readers with the historical, theoretical, and methodological foundations needed to understand the more complex ideas presented later. Two hundred discussion questions provide starting points for class.
