Advanced Planning and Scheduling in Manufacturing and Supply Chains Yuri Mauergauz, 2016-04-25 This book is a guide to modern production planning methods based on new scientific achievements and various practical planning rules of thumb Several numerical examples illustrate most of the calculation methods while the text includes a set of programs for calculating production schedules and an example of a cloud based enterprise resource planning ERP system Despite the relatively large number of books dedicated to this topic Advanced Planning and Scheduling is the first book of its kind to feature such a wide range of information in a single work a fact that inspired the author to write this book and publish an English translation This work consists of two parts with the first part addressing the design of reference and mathematical models bottleneck models and multi criteria models and presenting various sample models It describes demand forecasting methods and also includes considerations for aggregating forecasts Lastly it provides reference information on methods for data stocking and sorting The second part of the book analyzes various stock planning models and the rules of safety stock calculation while also considering the stock traffic dynamics in supply chains Various batch computation methods are described in detail while production planning is considered on several levels including supply planning for customers master planning and production scheduling This book can be used as a reference and manual for current planning methods It is aimed at production planning department managers company information system specialists as well as scientists and PhD students conducting research in production planning It will also be a valuable resource for students at universities of applied sciences

Applying Particle Swarm Optimization Burcu Adıgüzel Mercangöz, 2021-05-13 This book explains the theoretical structure of particle swarm optimization PSO and focuses on the application of PSO to portfolio optimization problems The general goal of portfolio optimization is to find a solution that provides the highest expected return at each level of portfolio risk According to H Markowitz's portfolio selection theory as new assets are added to an investment portfolio the total risk of the portfolio decreases depending on the correlations of asset returns while the expected return on the portfolio represents the weighted average of the expected returns for each asset The book explains PSO in detail and demonstrates how to implement Markowitz's portfolio optimization approach using PSO In addition it expands on the Markowitz model and seeks to improve the solution finding process with the aid of various algorithms In short the book provides researchers teachers engineers

managers and practitioners with many tools they need to apply the PSO technique to portfolio optimization Applications of Artificial Intelligence in Process Systems Engineering Jingzheng Ren, Weifeng Shen, Yi Man, Lichun Dong, 2021-06-05

Applications of Artificial Intelligence in Process Systems Engineering offers a broad perspective on the issues related to artificial intelligence technologies and their applications in chemical and process engineering The book comprehensively introduces the methodology and applications of AI technologies in process systems engineering making it an indispensable reference for researchers and students As chemical processes and systems are usually non linear and complex thus making it challenging to apply AI methods and technologies this book is an ideal resource on emerging areas such as cloud computing big data the industrial Internet of Things and deep learning With process systems engineering s potential to become one of the driving forces for the development of AI technologies this book covers all the right bases Explains the concept of machine learning deep learning and state of the art intelligent algorithms Discusses AI based applications in process modeling and simulation process integration and optimization process control and fault detection and diagnosis Gives direction to future development trends of AI technologies in chemical and process engineering Time Continuity in Discrete Time Models

Christopher Suerie, 2006-01-17 Production planning problems containing special characteristics from process industries are addressed in this book The main subject is the development of mathematical programming models that allow to model production plans which are not disrupted by discretization of time However discrete time models are used as a basis and are subsequently enhanced to include aspects of time continuity Their integration is achieved by different building blocks which may be combined freely according to the specific planning situation at hand The primary area of application of these kinds of models are process industries **Complex Systems Approach to Economic Dynamics** Abraham C.-L. Chian, 2007-08-17

Statistical analysis of stock markets and foreign exchange markets has demonstrated the intermittent nature of economic time series A nonlinear model of business cycles is able to simulate intermittency arising from order chaos and chaos chaos transitions This monograph introduces new concepts of unstable periodic orbits and chaotic saddles which are unstable structures embedded in a chaotic attractor and responsible for economic intermittency *Generalized Convexity and Related Topics* Igor V. Konnov, Dinh The Luc, Alexander M. Rubinov, 2006-11-22

The book contains invited papers by well known experts on a wide range of topics economics variational analysis probability etc closely related to convexity and generalized convexity and refereed contributions of specialists from the world on current research on generalized convexity and applications in particular to optimization economics and operations research **Economic Dynamics and**

Information Jaroslav Zajac, 2007-08-01 This book analyzes the existence of equilibria in economies having a measured space of agents and a continuum of agents and commodities Excessive homogeneity with respect to agent productivity leads to instability and non uniqueness of a given stationary state and the indeterminacy of the corresponding stationary state equilibrium Sufficient heterogeneity leads to global saddle path stability uniqueness of a given stationary state and the global

uniqueness of the corresponding equilibrium Economic Evolution and Equilibrium Marco

Lehmann-Waffenschmidt, 2007-05-07 This work uses various model frameworks to study the evolution of equilibria in an open loop evolving economy in which the model characteristics evolve without any directional restrictions except for continuity Applying mathematical methods it is shown that equilibria can always be adapted in a piecewise gradual non bang bang way

Artificial Economics Philippe Mathieu, Bruno Beaufils, Olivier Brandouy, 2005-12-17 Agent based Computational Economics ACE is a new discipline of economics largely grounded on concepts like evolution auto organisation and emergence it intensively uses computer simulations as well as artificial intelligence mostly based on multi agents systems The purpose of this book is to give an up to date view of the scientific production in the fields of Agent based Computational Economics mainly in Market Finance and Game Theory Based on communications given at AE 2005 Lille USTL France this book offers a wide panorama of recent advances in ACE both theoretical and methodological that will interest academics as well as practitioners Agent-Based Modeling Norman Ehrentreich, 2007-10-25 This book reconciles the existence of

technical trading with the Efficient Market Hypothesis By analyzing a well known agent based model the Santa Fe Institute Artificial Stock Market SFI ASM it finds that when selective forces are weak financial evolution cannot guarantee that only the fittest trading rules will survive Its main contribution lies in the application of standard results from population genetics which have widely been neglected in the agent based community *Topics in Dynamic Model Analysis* Mario Faliva, Maria Grazia Zoia, 2006-01-20 Classical econometrics which plunges its roots in economic theory with simultaneous equations models SEM as offshoots and time series econometrics which stems from economic data with vector autoregressive VAR models as offsprings scour like the Janus s facing heads the flowing of economic variables so as to bring to the fore their autonomous and non autonomous dynamics It is up to the so called final form of a dynamic SEM on the one hand and to the so called representation theorems of unit root VAR models on the other to provide informative closed form expressions for the trajectories or time paths of the economic variables of interest Should we look at the issues just put forward from a mathematical standpoint the emblematic models of both classical and time series econometrics would turn out to be difference equation systems with ad hoc characteristics whose solutions are attained via a final form or a representation theorem approach The final form solution algebraic technicalities apart arises in the wake of classical difference equation theory displaying besides a transitory autonomous component an exogenous one along with a stochastic nuisance term This follows from a properly defined matrix function inversion admitting a Taylor expansion in the lag operator because of the assumptions regarding the roots of a determinant equation peculiar to SEM specifications **Artificial Markets Modeling**

Andrea Consiglio, 2007-08-16 Agent based computational modeling with its intrinsic multidisciplinary approach is gaining increasing recognition in the social sciences particularly in economics business and finance The methodology is now widely used to compute analytical models numerically and test them for departures from theoretical assumptions and to provide

stand alone simulation models for problems that are analytically intractable This volume is devoted to recent contributions to the field from both the social sciences and computer sciences It presents applications of agent based computational methodologies and tools in the social sciences focusing strongly on the uses requirements and constraints of agent based models employed by social scientists Topics include agent based macroeconomics the emergence of norms and conventions the dynamics of social and economic networks and behavioral models in financial markets
