Making Of The Machine Age:

Arabic Type-Making in the Machine Age Titus Nemeth, 2017-07-20 Arabic is the third most widely used script in the world and gave rise to one of the richest manuscript cultures of mankind. Its representation in type has engaged printers, engineers, businesses, and designers since the 16th century, and today most digital devices render Arabic type. Yet the evolution of the printed form of Arabic and its development from metal to pixels has not been charted before. *Arabic Type-Making in the Machine Age* provides the first comprehensive account of this history using previously undocumented archival sources. In this richly illustrated volume, Titus Nemeth narrates the evolution of Arabic type under the influence of changing technologies from the perspective of a practitioner combining historical research with applied design considerations.

Making Arms in the Machine Age James J. Farley, 1994 *Making Arms in the Machine Age* traces the growth and development of the United States Arsenal at Frankford, Pennsylvania, from its origin in 1816 to 1870. During this period, the arsenal evolved from a small post where skilled workers hand-produced small arms ammunition to a full-scale industrial complex employing a large civilian workforce. James Farley uses the history of the arsenal to examine larger issues, including the changing technology of early nineteenth-century warfare, the impact of new technology on the United States Army, and the reactions of workers and their families and communities to the coming of industrialization. Shortly after the War of 1812, the U.S. Army founded several new arsenals, including Frankford, to build up supplies of arms and ammunition then in short supply. At that time, the Army was held in low regard because of its perceived poor performance in the war, so the arrival of arsenals was not welcomed. By 1870, however, the arsenal at Frankford had integrated itself into the community and become a valued and respected member of it. Farley argues that the Ordnance Department of the U.S. Army created an industrial system of manufacture at Frankford well in advance of private industry. He also contends that the evolution of the Army into an employer of a large-scale civilian workforce helped to end the isolation and anti-militarism that plagued it after the War of 1812. Farley's study joins recent work in the history of technology, such as Judith McGraw's *That Wonderful Machine*, that seeks to understand technological change in its social and cultural context.

Making Arms in the Machine Age: Philadelphia's Frankford Arsenal, 1816-1870, *Machine-age Comedy* Michael North, 2009 In this latest addition to Oxford's *Modernist Literature Culture* series, renowned modernist scholar Michael North poses fundamental questions about the relationship between modernity and comic form in film, animation, the visual arts, and literature. *Machine Age Comedy* vividly constructs a cultural history that spans the entire twentieth century, showing how changes wrought by industrialization have forever altered the comic mode. With keen analyses, North examines the work of a wide range of artists, including Charlie Chaplin, Walt Disney, Marcel Duchamp, Samuel Beckett, and David Foster Wallace, to show the creative and unconventional ways the routinization of industrial society has been explored in a broad array of cultural forms. Throughout, North argues that modern writers and artists found something inherently comic in new experiences of repetition associated

with enforced by and made inevitable by the machine age Ultimately this rich tightly focused study offers a new lens for understanding the development of comedic structures during periods of massive social political and cultural change to reveal how the original promise of modern life can be extracted from its practical disappointment
