neuroscience and cognitive psychology Neuroscientist and physicist Kelly Clancy shows how intertwined games have been with the arc of history War games shaped the outcomes of real wars in nineteenth and twentieth century Europe Game theory warped our understanding of human behavior and brought us to the brink of annihilation yet still underlies basic assumptions in economics politics and technology design We used games to teach computers how to learn for themselves and now we are designing games that will determine the shape of society and future of democracy In this revelatory new work Clancy makes the bold argument that the human fascination with games is the key to understanding our nature and our actions

Brooks, 2023-01-31 A crisis is coming for everyone who uses math and science For decades now the classical model of probability the indifference principle and the Gaussian distribution has been breaking down and revealing its limitations in fields from economics to epidemiology Now a new approach has revealed the underlying non classical principle behind all these anomalous laws Pareto's law of elite incomes Zipf's law of word frequencies Lotka's law of scientific publications Kleiber's law of metabolic rates the Clausewitz Dupuy law of combat friction Moore's law of computing costs the Wright Henderson cost law Weibull's law of electronics failures the Flynn Effect in IQ scores Benford's law of digit frequencies Farr's law of epidemics Hubbell's neutral theory of biodiversity Rogers law of innovation classes Wilson's law of island biogeography Smeed's law of traffic fatalities The general law behind all these particular laws and countless others is the decline effect As a system ages or grows in size the rules of probability subtly change Entropy increases rare items become rarer and average performance measures decline The human meaning of a decline may be positive decreasing costs falling epidemic mortality or negative lower customer loyalty decreasing efficiency but the mathematical pattern is always the same The implications are enormous as these examples show All epidemic diseases decline in infectiousness and in lethality HIV AIDS went from a highly infectious 95 percent fatal disease to a survivable condition with a latency of decades COVID 19 went from a death rate of 7 percent in early 2020 to under 2 percent in 2022 Hereditary dynasties around the world declined smoothly in lifespan from hundreds of years to tens of years When democracies replaced monarchies the decline in spans of party control continued *Education Outside the Classroom* Great Britain.
