Morphosis Connected Isolation:

Morphosis Thom Mayne, 1993 With writings by Thom Mayne this monograph illustrates a selection of projects many presented for the first time from this LA based group whose work stands as a response to the context and diversity of the urban environment The book gives an insight into the work of this firm covering the earlier works such as the Venice III houses to the recently completed Crawford house and Salick Healthcare building as well as the Higashi Nara and Chiba projects in Japan *Morphosis*, 1992 *Morphosis*, 1993 *Morphosis*, 1993 *The Force of the Virtual* Peter Gaffney, 2013-11-30 Gilles Deleuze once claimed that modern science has not found its metaphysics the metaphysics it needs The Force of the Virtual responds to this need by investigating the consequences of the philosopher's interest in and appeal to the exact sciences In exploring the problematic relationship between the philosophy of Deleuze and science the original essays gathered here examine how science functions in respect to Deleuze's concepts of time and space how science accounts for processes of qualitative change how science actively participates in the production of subjectivity and how Deleuze's thinking engages neuroscience All of the essays work through Deleuze's understanding of the virtual a force of qualitative change that is ontologically primary to the exact measurable relations that can be found in and among the objects of science By adopting such a methodology this collection generates significant new insights especially regarding the notion of scientific laws and compels the rethinking of such ideas as reproducibility the unity of science and the scientific observer Contributors Manola Antonioni Collège International de Philosophie Paris Clark Bailey Rosi Braidotti Utrecht U Manuel DeLanda U of Pennsylvania Aden Evens Dartmouth U Gregory Flaxman U of North Carolina Thomas Kelso Andrew Murphie U of New South Wales Patricia Pisters U of Amsterdam Arkady Plotnitsky Purdue U Steven Shaviro Wayne State U Arnaud Villani Premi re Sup rieure au Lyc e Mass na de Nice Site and Composition Enis Aldallal, Husam AlWaer, Soumyen Bandyopadhyay, 2016-06-10 Site and Composition examines design strategies and tactics in site making It is concerned with the need for a renewed understanding of the site in the twenty first century and the need for a critical position regarding the continued tendency to view the site as an isolated fragment severed from its wider context The book argues revisiting the traditional instruments or means of both siting and composition in Architecture to explore their true potential in achieving connections between site and context Through the various examples studied here it is suggested that such instrumental means have the potential for achieving greater poetic outcomes The book focuses on the works of twentieth century architects of wide ranging persuasion Peter Eisenman Le Corbusier Frank Lloyd Wright Alvaro Siza Herzog and de Meuron and Charles Correa for example who have strived in quite different ways to achieve deeper engagement with the physical qualities of place and context Departing from a reconsideration of the fragment Site and Composition emphasises the role of the positive fragment in achieving both historical continuity and renewed wholeness The potential of both planimetric and sectional compositional methods are explored emphasising the importance of reciprocity between inside and outside between

fragment and the whole as well as materiality Written in a clear and accessible manner this book makes vital reading for both researchers and students of architecture and urbanism **Visioning Technologies** Graham Cairns, 2016-12-08 Visioning Technologies brings together a collection of texts from leading theorists to examine how architecture has been and is reframed and restructured by the visual and theoretical frameworks introduced by different technologies of sight understood to include orthographic projection perspective drawing telescopic devices photography film and computer visualization amongst others Each chapter deals with its own area and historical period of expertise organized sequentially to mark out and analyse the historical evolution of how architecture has been transformed by technologically induced shifts in human perception from the 15th century until today This book underlines the way in which architectural forms and design processes have developed historically in conjunction with the systems of sight we manufacture technologically and suggests this continues today Paradoxically it is premised on the argument that these technological systems tend in their initial formulations to obtain ever greater realism in our visualizations of the physical world **Encyclopedia of Twentieth Century Architecture** R.
