Principles Of Materials Selection For Engineering Design:

The Principles of Materials Selection for Engineering Design P. L. Mangonon, 1999 Introducing readers to the methodology of engineering design the book shows how materials selection comes into play during the design of a component or a structure and examines such engineering requirements as stress mode of loading corrosion and performance efficiencies of materials Readers are acquainted with the factors of costs and statutory requirements including environmental regulations and recycling and case studies are integrated throughout to illustrate the selection process

The Principles of Materials Selection for Engineering Design Pat L. Mangonon, 1999 *The Principles of Materials Selection for Engineering Design* P. L. Mangonon, 1999 *Handbook of Materials Selection for Engineering Applications* George Murray, 1997-07-03 Reflecting the rapid advances in new materials development this work offers up to date information on the properties and applications of various classes of metals polymers ceramics and composites It aims to simplify the materials selection process and show how to lower materials and manufacturing costs drawing on such sources as vendor supplies

Materials and Process Selection for Engineering Design Mahmoud M. Farag, 2020-12-30 Introducing a new engineering product or changing an existing model involves developing designs reaching economic decisions selecting materials choosing manufacturing processes and assessing environmental impact These activities are interdependent and should not be performed in isolation from each other This is because the materials and processes used in making a product can have a major influence on its design cost and performance in service This Fourth Edition of the best selling *Materials and Process Selection for Engineering Design* takes all of this into account and has been comprehensively revised to reflect the many advances in the fields of materials and manufacturing including Increasing use of additive manufacturing technology especially in biomedical aerospace and automotive applications Emphasizing the environmental impact of engineering products recycling and increasing use of biodegradable polymers and composites Analyzing further into weight reduction of products through design changes as well as material and process selection especially in manufacturing products such as electric cars Discussing new methods for solving multi criteria decision making problems including multi component material selection as well as concurrent and geometry dependent selection of materials and joining technology Increasing use of MATLAB by engineering students in solving problems This textbook features the following pedagogical tools New and updated practical case studies from industry A variety of suggested topics and background information for in class group work Ideas and background information for reflection papers so readers can think critically about the material they have read give their interpretation of the issues under discussion and the lessons learned and then propose a way forward Open book exercises and questions at the end of each chapter where readers are evaluated on how they use the material rather than how well they recall it in addition to the traditional review questions Includes a solutions manual and PowerPoint lecture materials for adopting professors Aimed at students in mechanical manufacturing

and materials engineering as well as professionals in these fields this book provides the practical know how in order to choose the right materials and processes for development of new or enhanced products

Materials and Process Selection for Engineering Design, Third Edition Mahmoud M. Farag, 2013-11-19 Introducing a new engineering product or changing an existing model involves making designs reaching economic decisions selecting materials choosing manufacturing processes and assessing its environmental impact These activities are interdependent and should not be performed in isolation from each other This is because the materials and processes used in making the product can have a large influence on its design cost and performance in service Since the publication of the second edition of this book changes have occurred in the fields of materials and manufacturing Industries now place more emphasis on manufacturing products and goods locally rather than outsourcing Nanostructured and smart materials appear more frequently in products composites are used in designing essential parts of civilian airliners and biodegradable materials are increasingly used instead of traditional plastics More emphasis is now placed on how products affect the environment and society is willing to accept more expensive but eco friendly goods In addition there has been a change in the emphasis and the way the subjects of materials and manufacturing are taught within a variety of curricula and courses in higher education This third edition of the bestselling Materials and Process Selection for Engineering Design has been comprehensively revised and reorganized to reflect these changes In addition the presentation has been enhanced and the book includes more real world case studies

Materials and Process Selection for Engineering Design, Second Edition Mahmoud M. Farag, 2008 Taking a practical approach this work illustrates how design materials and process selection must mesh together and be considered along with economic and environmental analysis when developing a new product or changing an existing model It also considers the trade offs that must sometimes be made This second edition adds and revises topics such as environmental function and aesthetic considerations in design environmental impact assessment of materials and processes life cycle and recycling economics and materials substitution The book begins with an intro that reviews stages of product development This is followed by three sections covering Mechanical failures environmental degradation and materials that resist different types of failure Elements of engineering design and the effect of material properties and manufacturing processes on the design of components Economic and environmental aspects of materials and manufacturing processes as well as quantitative and computer assisted methods for screening ranking alternatives and deciding on the optimum material process combination Examples and detailed case studies illustrating practical applications as well as materials selection and substitution from a variety of industries are included Each chapter begins with clear objectives and ends with a summary review questions and bibliography Appendices supply tables of composition and properties and a glossary of technical terms SI units are used with Imperial units given when possible This student friendly text demonstrates how to balance design materials process selection and economic and environmental analysis to optimize manufacturing processes for a given

component The author maintains a book website which features PowerPoint presentations for each chapter and access to a solutions manual for qualifying instructors Professor Faraq s book website
