Voskoglou, 2024-10-08 Fuzzy Methods for Assessment and Decision Making presents the assessment of learning and problem solving skills with qualitative grades These methods are outcomes of the author s research work on the subject for more than 20 years In particular a hybrid assessment model uses the Center of Gravity COG defuzzification technique closed real intervals grey numbers neutrosophic sets and soft sets as tools The book starts with the basic mathematical background that is needed for an understanding of its contents The Rectangular Fuzzy Assessment Model RFAM of Subbotin and Voskoglou is presented next the outcomes of which are compared to those of the GPA index The book presents innovative fuzzy assessment methods enabling readers to assess the mean and quality performance of learning or problem solving skills of a group of students when qualitative linguistic grades are used for this purpose In the case of using linguistic grades for the assessment of a group s skills the classical method of calculating the mean value of the numerical grades cannot be applied

Also no safe conclusions can be obtained on comparing the quality performance of two groups when the values of their GPA index are equal Presents innovative fuzzy assessment methods to enable readers to assess the mean and quality performance of learning Discusses fuzzy logic and techniques for decision making in all domains Includes applications of fuzzy decision making as a hybrid model using soft sets grey numbers and neutrosophic sets

Vabishchevich,2014-12-11 This book discusses questions of numerical solutions of applied problems on parallel computing systems Nowadays engineering and scientific computations are carried out on parallel computing systems which provide parallel data processing on a few computing nodes In the development of up to date applied software this feature of computers must be taken into account for the maximum efficient usage of their resources In constructing computational algorithms we should separate relatively independent subproblems in order to solve them on a single computing node
