Principles of Linear Algebra With Maple Kenneth M. Shiskowski, Karl Frinkle, 2010-09-28 An accessible introduction to the theoretical and computational aspects of linear algebra using Maple™ Many topics in linear algebra can be computationally intensive and software programs often serve as important tools for understanding challenging concepts and visualizing the geometric aspects of the subject *Principles of Linear Algebra with Maple* uniquely addresses the quickly growing intersection between subject theory and numerical computation providing all of the commands required to solve complex and computationally challenging linear algebra problems using Maple The authors supply an informal accessible and easy to follow treatment of key topics often found in a first course in linear algebra Requiring no prior knowledge of the software the book begins with an introduction to the commands and programming guidelines for working with Maple Next the book explores linear systems of equations and matrices applications of linear systems and matrices determinants inverses and Cramer's rule Basic linear algebra topics such as vectors dot product cross product and vector projection are explained as well as the more advanced topics of rotations in space rolling a circle along a curve and the TNB Frame Subsequent chapters feature coverage of linear transformations from $\mathbb{R}^n$ to $\mathbb{R}^m$ the geometry of linear and affine transformations least squares fits and pseudoinverses and eigenvalues and eigenvectors The authors explore several topics that are not often found in introductory linear algebra books including sensitivity to error and the effects of linear and affine maps on the geometry of objects The Maple software highlights the topic's visual nature as the book is complete with numerous graphics in two and three dimensions animations symbolic manipulations numerical computations and programming In addition a related Web site features supplemental material including Maple code for each chapter's problems solutions and color versions of the book's figures Extensively class tested to ensure an accessible presentation *Principles of Linear Algebra with Maple* is an excellent book for courses on linear algebra at the undergraduate level It is also an ideal reference for students and professionals who would like to gain a further understanding of the use of Maple to solve linear algebra problems

Introduction to Linear Algebra Gordon Mills, 2017-07-12 This is the first book on linear algebra written specifically for social scientists It deals only with those aspects of the subject applicable in the social sciences and provides a thorough understanding of linear algebra for those who wish to use it as a tool in the design execution and interpretation of research Linear mathematical models play an important role in all of the social sciences This book provides a step by step introduction to those parts of linear algebra which are useful in such model building It illustrates some of the applications of linear analysis and helps the reader learn how to

convert his formulation of a social science problem into algebraic terms The author covers matrix algebra computational methods linear models involving discrete variables and clear complete explanations of necessary mathematical concepts Prior knowledge of calculus is not required since no use is made of calculus or of complex numbers A novel feature of the mathematical content of the book is the treatment of models expressed in terms of variables which must be whole numbers integers The book is distinguished by a step by step exposition that allows the reader to grasp quickly and fully the principles of linear algebra All of the examples used to illustrate the text are drawn from the social sciences enabling the reader to relate the subject to concrete problems in his field Exercises are included as a necessary part of the text to develop points not covered in the text and to provide practice in the algebraic formulation of applied problems An appendix gives solutions or hints for selected exercises
