Principles Of Terrestrial Ecosystem Ecology:

Principles of Terrestrial Ecosystem Ecology F Stuart Chapin III, Pamela A. Matson, Peter Vitousek, 2011-09-02 Ecosystem ecology regards living organisms including people and the elements of their environment as components of a single integrated system. The comprehensive coverage in this textbook examines the central processes at work in terrestrial ecosystems including their freshwater components. It traces the flow of energy, water, carbon, and nutrients from their abiotic origins to their cycles through plants, animals, and decomposer organisms. As well as detailing the processes themselves, the book goes further to integrate them at various scales of magnitude: those of the ecosystem, the wider landscape, and the globe. It synthesizes recent advances in ecology with established and emerging ecosystem theory to offer a wide-ranging survey of ecosystem patterns and processes in our terrestrial environment. Featuring review questions at the end of each chapter, suggestions for further reading, and a glossary of ecological terms, *Principles of Terrestrial Ecosystem Ecology* is a vitally relevant text suitable for study in all courses in ecosystem ecology. Resource managers and researchers in many fields will welcome its thorough presentation of ecosystem essentials.

A. Mooney, 2002-08-12 Features review questions at the end of each chapter. Includes suggestions for recommended reading. Provides a glossary of ecological terms. Has a wide audience as a textbook for advanced undergraduate students, graduate students, and as a reference for practicing scientists from a wide array of disciplines. *Terrestrial Ecosystem Ecology* Göran I. Ågren, Folke O. Andersson, 2011-12-15 Human activities impact the environment and modify the cycles of important elements such as carbon and nitrogen from local to global scales. In order to maintain long-term and sustainable use of the world's natural resources, it is important that we understand how and why ecosystems respond to such changes. This book explains the structure and functioning of terrestrial ecosystems using examples ranging from the Arctic to the tropics to demonstrate how they react under differing conditions. This knowledge is developed into a set of principles that can be used as starting points for analysing questions about ecosystem behaviour. Ecosystem dynamics are also considered, illustrating how ecosystems develop and change over a range of temporal and spatial scales and how they react to perturbations, whether natural or man-made. Throughout the book, descriptive studies are merged with simple mathematical models to reinforce the concepts discussed and aid the development of predictive tools.

Spatial Patterns and Mechanisms for Terrestrial Ecosystem Carbon Fluxes in the Northern Hemisphere Zhi Chen,2018-02-19 This book systematically illustrates the underlying mechanisms of spatial variation in ecosystem carbon fluxes It presents the regulation of climate pattern together with its impacts on ecosystem traits which yields new insights into the terrestrial carbon cycle and offers a theoretic basis for large scale carbon pattern assessment By means of integrated analysis the clear spatial pattern of carbon fluxes including gross primary production ecosystem respiration and net ecosystem production along latitudes is clarified from regions to the entire Northern Hemisphere Temperature and precipitation patterns play a vital role in carbon spatial pattern formation which strongly supports the application of the climate driven theory to the Northern Hemisphere With regard to the spatial pattern the book demonstrates the covariation between production and respiration offering new information to promote current respiration model development Moreover it reveals the high carbon uptake of subtropical forests across the East Asian monsoon region which challenges the view that only mid to high latitude terrestrial ecosystems are principal carbon sink regions and improves our understanding of carbon budgets and distribution
