Binswanger-Mkhize, Camille Bourguignon, Rogerius Johannes Eugenius van den Brink, 2009-01-01 Despite 250 years of land reform all over the World important land inequalities remain especially in Latin America and Southern Africa While in these countries there is near consensus on the need for redistribution much controversy persists around how to redistribute land peacefully and legally often blocking progress on implementation This book focuses on the how of land redistribution in order to forge greater consensus among land reform practitioners and enable them to make better choices on the mechanisms of land reform Reviews and case studies describe and analyze the al **Common-Property Arrangements and Scarce**

**Resources** Edward M. Barbanell, 2001-09-30 It is widely held that private ownership is the preferred end state for all scarce resources Those who hold this view have not looked closely enough at water in the American West Barbanell contends Because of water s special attributes private ownership is an ineffective means for protecting individuals interests Splitting the various rights of ownership between individual resources users and the community to which they belong can better protect those interests Barbanell develops a conception of this form of common ownership a common property arrangement and shows that it can function effectively for water in the West More generally he offers an expanded framework for analyzing right relationships and examining problems related to resource scarcity Some economists argue that John Locke s account of property justifies the private ownership of water in the West Barbanell argues however that because Locke did not think carefully enough about the variable nature of resources his account does not support that conclusion Although economists recognize that private ownership may not be perfectly suited to all resources they are nonetheless skeptical about common ownership alternatives Barbanell shows that this skepticism is unwarranted When the rights relationship among members of a resource community is based on mutual expectations of reciprocal behavior then a common property arrangement can function effectively to control the degradation and depletion of a scarce resource Barbanell s argument that common ownership is a conceptually sound and politically viable alternative for water will be of particular interest to public policy makers environmentalists resource economists and political philosophers
