Textbook of Medical Administration and Leadership Erwin Loh, Paul W. Long, 2023-10-29 This textbook covers all general areas of knowledge required for a trainee generalist medical administrator and doctor undergoing training to be a medical administrator specialist. Chapters cover all the key topics on medical administration and leadership. Some of the key topics included are health systems and policy, health law, private health and insurance, health disaster planning, population and public health, health information and technology, and health economics and financial management. Medical practitioners of today are part of huge changes in medical practice as continuing developments are happening in biomedical sciences and clinical practice with new health priorities, rising expectations among patients and the public, and changing societal attitudes. Consequently, basic knowledge and skills while fundamentally important are not enough today on their own, and doctors thus need to demonstrate leadership combined with sound management skills to drive the necessary changes required to meet the challenges ahead. This book serves as an invaluable resource for a wide spectrum of physicians including specialists, clinician managers, and other health professionals as well as non-clinical managers working in health. This is a gateway text for trainees in medical administration, specialist medical administrators, aspiring medical managers, health service managers, and heads of service and departments in various medical specialties.

Resources in Education, 1997 Faxon ... Librarians' Guide to Serials, 1987 *Supply Chain Engineering and Logistics Handbook* Erick C. Jones, 2019-11-12 This handbook begins with the history of Supply Chain SC Engineering; it goes on to explain how the SC is connected today and rounds out with future trends. The overall merit of the book is that it introduces a framework similar to sundial that allows an organization to determine where their company may fall on the SC Technology Scale. The book will describe those who are using more historic technologies, companies that are using current collaboration tools for connecting their SC to other global SCs, and the SCs that are moving more towards cutting-edge technologies. This book will be a handbook for practitioners, a teaching resource for academics, and a guide for military contractors. Some figures in the eBook will be in color. Presents a decision model for choosing the best Supply Chain Engineering (SCE) strategies for Service and Manufacturing Operations with respect to Industrial Engineering and Operations Research techniques. Offers an economic comparison model for evaluating SCE strategies for manufacturing outsourcing as opposed to keeping operations in-house. Demonstrates how to integrate automation techniques such as RFID into planning and distribution operations. Provides case studies of SC inventory reductions using automation from AIT and RFID research.

Covers planning and scheduling as well as transportation and SC theory and problems
