Understanding Computers Deborah Morley, Charles S. Parker, 2017 **ROBOT2013: First Iberian Robotics Conference** Manuel A. Armada, Alberto Sanfeliu, Manuel Ferre, 2013-11-12 The interest in robotics has remarkably augmented over recent years Novel solutions for complex and very diverse application fields exploration intervention in severe environments assistive social personal services emergency rescue operations transportation entertainment unmanned aerial vehicles medical etc has been anticipated by means of a large progress in this area of robotics Moreover the amalgamation of original ideas and related innovations the search for new potential applications and the use of state of the art supporting technologies permit to foresee an important step forward and a significant socio economic impact of advanced robot technology in the forthcoming years In response to the technical challenges in the development of these sophisticated

machines a significant research and development effort has yet to be undertaken. It concerns embedded technologies for power sources, actuators, sensors, information systems, new design methods, adapted control techniques for highly redundant systems, as well as operational and decisional autonomy and human robot co-existence. This book contains the proceedings of the ROBOT 2013 FIRST IBERIAN ROBOTICS CONFERENCE and it can be said that it included both state of the art and more practical presentations dealing with implementation problems, support technologies and future applications. A growing interest in Assistive Robotics, Agricultural Robotics, Field Robotics, Grasping and Dexterous Manipulation, Humanoid Robots, Intelligent Systems and Robotics, Marine Robotics has been demonstrated by the very relevant number of contributions. Moreover, ROBOT2013 incorporates a special session on Legal and Ethical Aspects in Robotics that is becoming a topic of key relevance. This Conference will be held in Madrid 28-29 November 2013, organised by the Sociedad Española para la Investigación y Desarrollo en Robótica (SEIDROB) and by the Centre for Automation and Robotics (CAR), Universidad Politécnica de Madrid (UPM) and Consejo Superior de Investigaciones Científicas (CSIC) along with the co-operation of Grupo Temático de Robótica (CEA-GTRob), Sociedade Portuguesa de Robotica (SPR) and Asociación Española de Promoción de la Investigación en Agentes Físicos (RedAF).

Robotics in Education Wilfried Lepuschitz, Munir Merdan, Gottfried Koppensteiner, Richard Balogh, David Obdržálek, 2018-09-01. This proceedings volume comprises the latest achievements in research and development in educational robotics presented at the 9th International Conference on Robotics in Education (RiE) held in Qawra, St Paul's Bay, Malta during April 18-20, 2018. Researchers and educators will find valuable methodologies and tools for robotics in education that encourage learning in the fields of science, technology, engineering, arts and mathematics (STEAM) through the design, creation and programming of tangible artifacts for creating personally meaningful objects and addressing real-world societal needs. This also involves the introduction of technologies ranging from robotics platforms to programming environments and languages. Extensive evaluation results are presented that highlight the impact of robotics on the students' interests and competence development. The presented approaches cover the whole educative range from elementary school to the university level in both formal as well as informal settings.

Machine Ethics and Robot Ethics Wendell Wallach, Peter Asaro, 2020-09-10. Once the stuff of science fiction, recent progress in artificial intelligence, robotics and machine learning means that these rapidly advancing technologies are finally coming into widespread use within everyday life. Such rapid development in these areas also brings with it a host of social, political and legal issues, as well as a rise in public concern and academic interest in the ethical challenges these new technologies pose. This volume is a collection of scholarly work from leading figures in the development of both robot ethics and machine ethics; it includes essays of historical significance which have become foundational for research in these two new areas of study, as well as important recent articles. The research articles selected focus on the control and governance of computational systems, the exploration of ethical and moral theories using software and robots as laboratories or simulations, inquiry into the necessary

requirements for moral agency and the basis and boundaries of rights and questions of how best to design systems that are both useful and morally sound Collectively the articles ask what the practical ethical and legal issues arising from the development of robots will be over the next twenty years and how best to address these future considerations

Living with Robots Ruth Aylett,Patricia A. Vargas,2023-05-02 The truth about robots two experts look beyond the hype offering a lively and accessible guide to what robots can and can t do There s a lot of hype about robots some of it is scary and some of it utopian In this accessible book two robotics experts reveal the truth about what robots can and can t do how they work and what we can reasonably expect their future capabilities to be It will not only make you think differently about the capabilities of robots it will make you think differently about the capabilities of humans Ruth Aylett and Patricia Vargas discuss the history of our fascination with robots from chatbots and prosthetics to autonomous cars and robot swarms They show us the ways in which robots outperform humans and the ways they fall woefully short of our superior talents They explain how robots see feel hear think and learn describe how robots can cooperate and consider robots as pets butlers and companions Finally they look at robots that raise ethical and social issues killer robots sexbots and robots that might be gunning for your job Living with Robots equips readers to look at robots concretely as human made artifacts rather than placeholders for our anxieties Find out Why robots can swim and fly but find it difficult to walk Which robot features are inspired by animals and insects Why we develop feelings for robots Which human abilities are hard for robots to emulate
