Robust Statistics The Approach Based On Influence Functions:

Robust Statistics Frank R. Hampel, Elvezio M. Ronchetti, Peter J. Rousseeuw, Werner A. Stahel, 2011-09-20 The Wiley Interscience Paperback Series consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation. With these new unabridged softcover volumes, Wiley hopes to extend the lives of these works by making them available to future generations of statisticians, mathematicians, and scientists. This is a nice book containing a wealth of information, much of it due to the authors. If an instructor designing such a course wanted a textbook, this book would be the best choice available. There are many stimulating exercises, and the book also contains an excellent index and an extensive list of references. *Technometrics* This book should be read carefully by anyone who is interested in dealing with statistical models in a realistic fashion. *American Scientist* Introducing concepts, theory, and applications. *Robust Statistics* is accessible to a broad audience, avoiding allusions to high-powered mathematics while emphasizing ideas, heuristics, and background. The text covers the approach based on the influence function, the effect of an outlier on an estimator, for example, and related notions such as the breakdown point. It also treats the change of variance function, fundamental concepts, and results in the framework of estimation of a single parameter and applications to estimation of covariance matrices and regression parameters. *Robust Statistics* Frank R. Hampel, 1986 A complete, balanced introduction to the concepts, theory, and applications of robust statistics, this book provides a comprehensive account of the infinitesimal approach and offers insight into the robustness properties of existing procedures. It describes the effect of an outlier on virtually all classical statistical models and covers related notions such as the breakdown point and the change of variance functions. **Gravity, Geoid and Earth Observation** Stelios P. Mertikas, 2010-06-25 These Proceedings include the written version of papers presented at the IAG International Symposium on Gravity, Geoid, and Earth Observation 2008. multitude of uses of statistics in epidemiology and medical statistics written by internationally renowned experts is addressed to statisticians working in biomedical and epidemiological fields who use statistical and quantitative methods in their work. While the use of statistics in these fields has a long and rich history, explosive growth of science in general and clinical and epidemiological sciences in particular have gone through a sea of change spawning the development of new methods and innovative adaptations of standard methods. Since the literature is highly scattered, the Editors have undertaken this humble exercise to document a representative collection of topics of broad interest to diverse users. The volume spans a cross section of standard topics oriented toward users in the current evolving field as well as special topics in much need which have more recent origins. This volume was prepared especially keeping the applied statisticians in mind, emphasizing applications oriented methods and techniques including references to appropriate software when relevant. The contributors are internationally renowned experts in their respective areas. This volume addresses emerging statistical challenges in epidemiological, biomedical, and pharmaceutical research. It features methods for assessing Biomarkers, analysis of competing risks, clinical trials including sequential and group sequential crossover designs, cluster randomized and adaptive designs, and structural equations modelling and longitudinal data analysis.

Minimum Divergence Methods in Statistical Machine Learning Shinto Eguchi, Osamu Komori, 2022-03-14

This book explores minimum divergence methods of statistical machine learning for estimation, regression, prediction, and so forth, in which we engage in information geometry to elucidate their intrinsic properties of the corresponding loss functions, learning algorithms, and statistical models. One of the most elementary examples is Gauss's least squares estimator in a linear regression model in which the estimator is given by minimization of the sum of squares between a response vector and a vector of the linear subspace hulled by explanatory vectors. This is extended to Fisher's maximum likelihood estimator (MLE) for an exponential model in which the estimator is provided by minimization of the Kullback-Leibler (KL) divergence between a data distribution and a parametric distribution of the exponential model in an empirical analogue. Thus we envisage a geometric interpretation of such minimization procedures such that a right triangle is kept with Pythagorean identity in the sense of the KL divergence. This understanding sublimates a dualistic interplay between a statistical estimation and model which requires dual geodesic paths called m -geodesic and e -geodesic paths in a framework of information geometry. We extend such a dualistic structure of the MLE and exponential model to that of the minimum divergence estimator and the maximum entropy model which is applied to robust statistics, maximum entropy density estimation, principal component analysis, independent component analysis, regression analysis, manifold learning, boosting algorithm, clustering, dynamic treatment regimes, and so forth. We consider a variety of information divergence measures typically including KL divergence to express departure from one probability distribution to another. An information divergence is decomposed into the cross entropy and the diagonal entropy in which the entropy associates with a

generative model as a family of maximum entropy distributions the cross entropy associates with a statistical estimation method via minimization of the empirical analogue based on given data Thus any statistical divergence includes an intrinsic object between the generative model and the estimation method Typically KL divergence leads to the exponential model and the maximum likelihood estimation It is shown that any information divergence leads to a Riemannian metric and a pair of the linear connections in the framework of information geometry We focus on a class of information divergence generated by an increasing and convex function U called U divergence It is shown that any generator function U generates the U entropy and U divergence in which there is a dualistic structure between the U divergence method and the maximum U entropy model We observe that a specific choice of U leads to a robust statistical procedure via the minimum U divergence method If U is selected as an exponential function then the corresponding U entropy and U divergence are reduced to the Boltzmann Shannon entropy and the KL divergence the minimum U divergence estimator is equivalent to the MLE For robust supervised learning to predict a class label we observe that the U boosting algorithm performs well for contamination of mislabel examples if U is appropriately selected We present such maximal U entropy and minimum U divergence methods in particular selecting a power function as U to provide flexible performance in statistical machine learning

Calibration and Orientation of Cameras in Computer Vision

Armin Gruen, Thomas S. Huang, 2013-03-09 This book was conceived during the Workshop Calibration and Orientation of Cameras in Computer Vision at the XVIIth Congress of the ISPRS International Society of Photogrammetry and Remote Sensing in July 1992 in Washington D C The goal of this workshop was to bring photogrammetry and computer vision experts together in order to exchange ideas concepts and approaches in camera calibration and orientation These topics have been addressed in photogrammetry research for a long time starting in the second half of the 19th century Over the years standard procedures have been developed and implemented in particular for metric cameras such that in the photogrammetric community such issues were considered as solved problems With the increased use of non metric cameras in photogrammetry they are revealingly called amateur cameras especially CCD cameras and the exciting possibilities of acquiring long image sequences quite effortlessly and processing image data automatically online and even in real time the need to take a new and fresh look at various calibration and orientation issues became obvious Here most activities emerged through the computer vision community which was somewhat unaware as to what had already been achieved in photogrammetry On the other hand photogrammetrists seemed to ignore the new and interesting studies in particular on the problems of orientation that were being performed by computer vision experts
