Rockets And Spaceflight:

SpaceX Erik Seedhouse, 2013-06-15 This first account of commercial spaceflight's most successful venture describes the extraordinary feats of engineering and human achievement that have placed SpaceX at the forefront of the launch industry and made it the most likely candidate for transporting humans to Mars. Since its inception in 2002, SpaceX has sought to change the space launch paradigm by developing a family of launch vehicles that will ultimately reduce the cost and increase the reliability of space access tenfold. Coupled with the newly emerging market for governmental, private, and commercial space transport, this new model will re-ignite humanity's efforts to explore and develop space. Formed in 2002 by Elon Musk, the founder of PayPal and the Zip2 Corporation, SpaceX has already developed two state-of-the-art new launch vehicles, established an impressive launch manifest, and been awarded COTS funding by NASA to demonstrate delivery and return of cargo to the ISS. This book describes how simplicity, low cost, and reliability can go hand in hand, as promoted in the philosophy of SpaceX. It explains how, by eliminating the traditional layers of internal management and external subcontractors and keeping the vast majority of manufacturing in-house, SpaceX reduces its costs while accelerating decision making and delivery controls, quality, and ensures constant liaison between the design and manufacturing teams. **Finding**

Out about Rockets and Spaceflight Lynn Myring, 1982 Describes modern spaceflight with speculations about interplanetary travel. Spaceport Earth Joe Pappalardo, 2019-03-26 Tackles the ever-changing twenty-first century space industry and what privately funded projects like Elon Musk's SpaceX mean for the future of space travel. Foreign Policy Creating a seismic shift in today's space industry, private sector companies including Elon Musk's SpaceX and Jeff Bezos's Blue Origin are building a dizzying array of new spacecraft and rockets not just for government use but for any paying customer. At the heart of this space revolution are spaceports, the center and literal launching pads of spaceflight. Spaceports cost hundreds of millions of dollars, face extreme competition, and host operations that do not tolerate failures, which can often be fatal. Aerospace journalist Joe Pappalardo has witnessed space rocket launches around the world, from the jungle of French Guiana to the coastline of California. In his comprehensive work Spaceport Earth, Pappalardo describes the rise of private companies and how they are reshaping the way the world is using space for industry and science. Spaceport Earth is a travelogue through modern space history as it is being made, offering space enthusiasts, futurists, and technology buffs a close perspective of rockets and launch sites and chronicling the stories of industrial titans, engineers, government officials, billionaires, schemers, and politicians who are redefining what it means for humans to be a spacefaring species. Private companies and rich people like Elon Musk and Jeff Bezos have taken over the exploration of space. Pappalardo explores this new sort of spacefaring at the outer reaches of business and technology. The New York Times For anyone obsessed with how spaceflight grew into what it is today, this book is a must-have. Popular Mechanics **Rockets Into Space** Frank H.
