Role Of Aging In Atherosclerosis The Sequestration Hypothesis:

The Role of Aging in Atherosclerosis R.E. Tracy, 2013-03-09 The cover of this book summarizes the central features of the sequestration hypothesis. Commonplace appearances seen in human coronary artery fat stained in paraffin sections by a new technique explained in Chapter Eleven are arranged to suggest pathways of evolution toward atheroma. The hypothesis formulated and defended in the pages of this book is this: Fibroplasia progresses upward in column a from 1a to 3a as a characteristic feature of aging. This starts sooner and progresses faster in men than in women. Numbers of SMCs remain essentially constant so that fibroplasia per SMC steadily increases. The rise upward conveys an increasing propensity to sequester atherogenic lipids causing transition rightward into column b. Sequestered extracellular lipid then attracts fatty streak elements especially foam cells and lymphocytes to propel the arterial site rightward into column c. Frame 1c corresponds to the AHA Lesions Committee classification type IIb, the progression-resistant fatty streak arising directly without prior lipid sequestration; this can progress to atheroma but slowly after much delay, although extreme provocation can accelerate the process. Such progression is rightward toward atheroma with thin cap, not upward toward fibroplastic thickening. Frame 2c corresponds to the AHA classification type IIa, progression-prone fatty streaks. These readily evolve into atheroma again by horizontal progression. The British National Bibliography Arthur James Wells, 2003 **Recent**

Advances in Geriatrics Mario Barbagallo, Giuseppe Licata, James R. Sowers, 2013-06-29 This book *Recent Advances in Geriatrics* is based on the proceedings of the 8th Course of the School of Gerontology and Geriatrics held in Erice, Trapani, Italy, at the International Centre for Scientific Culture Ettore Majorana on March 20-25, 1997. This international effort was organized jointly by professors from the University of Palermo, Italy, and from Wayne State University, Michigan, USA, as a result of a cross-cultural collaboration of several years. The increasing average age of the populations in industrialized countries has resulted in increased interest in the different biological, medical, psychological, and economic aspects related to the health and social care of the elderly. Physicians and health care practitioners are realizing the need for a revised approach to geriatric care. Comprising contributions of clinicians and scientists from Italy and North America, the present volume provides a multidisciplinary approach to many gerontological and geriatric problems examined from a scientific and a practical point of view. Several of the most important aspects of the aging process: the genetics of aging, body composition, modification, immunological, endocrinological, and renal physiology changes have been addressed. Data from a multi-center Italian study on centenarians is reported together with an update on clinical and pharmacological approaches to dementia syndromes and economic and social aspects related to the care of the elderly. **Cumulated Index Medicus**, 1969

Archives of Pathology & Laboratory Medicine, 2007 **Physiological Basis of Aging and Geriatrics** Paola S. Timiras, 2007-08-16 Extensively revised and updated to reflect the current state of knowledge in the study of aging, this Fourth Edition offers a complete profile of the aging process at all levels from molecules and cells to demography and

evolution Written by international experts in current basic and clinical aging research this text includes aspects of individual comparative and differential aging and discussions of theories and mechanisms of aging This invaluable reference illustrates how bodily systems organs and functions are affected with aging describes how genetic and environmental factors influence age related changes and addresses some of the clinical consequences of these changes for health and longevity Well illustrated with numerous tables and graphs this book presents up to date information from internationally renowned experts in various bio medical fields

Legato,John P. Bilezikian,2004 Principles of Gender Specific Medicine examines how normal human biology differs between men and women and how the diagnosis and treatment of disease differs as a function of gender This revealing research covers various conditions that predominantly occur in men and as well conditions that predominantly occur in women Among the subjects covered are cardiovascular disease mood disorders the immune system lung cancer as a consequence of smoking osteoporosis diabetes obesity and infectious diseases Gathers important information in the field of gender based biology and clinical medicine proving that a patient s sex is increasingly important in preventing illness making an accurate diagnosis and choosing safe and effective treatment of disease Addresses gender specific areas ranging from organ transplantation gall bladder and biliary diseases to the epidemiology of osteoporosis and fractures in men and women Many chapters present questions about future directions of investigations

Aging, neurogenesis and neuroinflammation in hearing loss and protection Marta Magariños,Marta Milo,Isabel Varela-Nieto,2015-09-29 Worldwide 278 million people are estimated to have moderate to profound hearing loss Age related hearing loss also known as presbycusis affects approximately half of the population over 60 years old making it the second most common cause of disability in older people Hearing loss occurs when the sensory cells and neurons of the cochlea degenerate and die The vestibular system which holds the sense of balance shares a common embryonic origin with the cochlea and together conform the inner ear Balance problems are a trait of ageing to the point that balance ability is considered a sensor of physical decline and vestibular degeneration is the most common cause of falls in the elderly Still the molecular bases of ageing in the vestibular system have not been studied in detail Genetic and environmental factors contribute to the progression of age related hearing loss ARHL Being noise the main environmental noxious agent for human hearing in the industrialized societies There is no restorative treatment for deafness but functional replacement by means of prosthesis Therefore prevention and treatment of hearing loss is an unmet medical need To develop innovative medical strategies against hearing loss it is critical to understand the causes of ARHL and the essential pathways responsible for the manifestation of this complex disease In this research topic experts will discuss the stages and molecular elements of the damage and repair processes involved in ARHL from cellular processes to molecules involved in aging Oxidative stress takes a central stage as an essential element in the

progression of injury and cell loss and a target for cell protection strategies Finally the mechanisms of action and the potential of novel therapies for hair cell repair and protection will be discussed along with drug delivery strategies

Critical Reviews of Oxidative Stress and Aging Richard G. Cutler, Henry Rodriguez, 2003 This two volume reference examines the translational research field of oxidative stress and ageing It focuses on understanding the molecular basis of oxidative stress and its associated age related diseases with the goal of developing new methods for treating the human ageing processes

Critical Reviews Oxidative Stress And Aging: Advances In Basic Science, Diagnostics And Intervention (In 2 Vols) Richard G Cutler, Henry Rodriguez, 2002-10-28 This innovative and comprehensive reference book provides the most up to date information pertaining to the translational research field of oxidative stress and aging The book focuses on understanding the molecular basis of oxidative stress and its associated age related diseases with the goal being the development of new and novel methods in treating the human aging processes The book charts the course of this new and rapidly emerging field of Oxidative Stress Diagnostics and Therapeutics that will have a significant impact on the future economics science and practice of medicine Over 100 of the leading experts in this field whose specialty includes biogerontology geriatric medicine free radical chemistry and biology oncology cardiology neurobiology dermatology pharmacology nutrition and molecular medicine have contributed information to this book This reference book is an essential reading material to a broad range of individuals including researchers physicians corporate industry leaders graduate and medical school students as well as the many health conscious individuals who wish to know more about the emerging field of oxidative stress and aging with an emphasis on diagnostics and intervention
