Role Of Central Conceptual Structures In The Development Of C:

The Mind's Staircase Robbie Case, 2013-04-15 The shortcomings of Piaget's theory of intellectual development are well known. Less clear is what sort of theory should be devised to replace it. This volume describes the current main contenders including neo-Piagetian, neo-connectionist, neo-innatist and sociocultural models. Its contributors conclude that none of these models are adequate because each one implies a view of the human mind which is either too general, too particular or too modular. A collaborative program of research seven years in the making is then described which gives support to a newly emerging synthesis of these various positions.

Exceptionality in East Asia Shane N. Phillipson, Heidrun Stoeger, Albert Ziegler, 2013-01-04 The continual successes of students from East Asia are confirmed in a variety of international tests of academic achievement and yet despite this attainment many scholars have realised that a substantial proportion of these students are also underachieving. Using the actiotope model of giftedness to integrate a broad range of research, this innovative book features a number of chapters written by internationally recognised scholars in a frank and lively discussion about the origins of exceptionality in students from East Asia. With the actiotope model as the theoretical framework, the book distinguishes between trait models of giftedness and systems approaches to exceptionality. Breaking new ground in understanding the complex interactions between a learner's environment, goals, intelligence and motivations in the development of their ever-expanding knowledge and skill set, this book will describe with examples a systems approach to the development of exceptionality, allowing educators and researchers the ability to track students with greater precision, influence the means by which educators identify and support students with the potential for exceptional performance, suggest possible reasons for the variability in the achievement of potentially gifted students, provide strategies to support these students, have a profound effect on the way that exceptionality and giftedness are defined and understood, not only in East Asia but also in the West. Covering issues that have firm theoretical foundations and which are based on cutting edge ideas, *Exceptionality in East Asia* has significant implications for gifted education and is essential reading for scholars, undergraduate and postgraduate students interested in the psychological and social basis of exceptionality.

Cognitive Development Sergio Morra, Camilla Gobbo, Zopito Marini, Ronald Sheese, 2012-12-06 Tying together almost four decades of neo-Piagetian research, *Cognitive Development* provides a unique critical analysis and a comparison of concepts across neo-Piagetian theories. Like Piaget, neo-Piagetian theorists take a constructivist approach to cognitive development, are broad in scope and assume that cognitive development is divided into stages with qualitative differences. Unlike Piaget, however, they define the increasing complexity of the stages in accordance with the child's information processing system rather than in terms of logical properties. This volume illustrates these characteristics and evidences the exciting possibilities for neo-Piagetian research to build connections both with other theoretical approaches such as dynamic systems and with other fields such as brain science. The opening chapter provides a historical orientation including a critical distinction between the

logical and the dialectical Piaget In subsequent chapters the major theories and experimental findings are reviewed including Pascual Leone s Theory of Constructive Operators Halford s structuralist theory Fischer s dynamic systems approach to skills Case s theory of Central Conceptual Structures Siegler s microgenetic approach and the proposals of Mounoud and Karmiloff Smith as well as the work of others including Demetriou and de Ribaupierre The interrelation of emotional and cognitive development is discussed extensively as is relevant non neo Piagetian research on information processing The application of neo Piagetian research to a variety of topics including children s problem solving psychometrics and education is highlighted The book concludes with the authors views on possibilities for an integrated neo Piagetian approach to cognitive development

Conceptions of Development D.J. Lewkowicz,R. Lickliter,2018-10-24 This is a volume about the process of scientific discovery Thirteen leading senior scientists each interested in some aspect of behavioral development recount their intellectual journeys over the course of their careers and document their individual struggles to better understand and describe various developmental phenomena Covering a broad range of topics including perceptual motor social and cognitive development the contributors to this volume provide case studies of how one pursues a long term systematic research program and how scientists continually formulate and reformulate their working conceptual frameworks based on their research results Conceptions of Development provides a unique and personal behind the scenes account of the process of scientific discovery illustrating that useful and enduring scientific insight derives from the bidirectional interplay between

empirical work and theory formulation This volume will be of interest to a broad audience consisting not only of psychologists and psychobiologists interested in the study of development but also teachers and students interested in behavioral development and its investigation and the general reader interested in the process of scientific discovery Learning in Cultural Context Ashley E. Maynard, Mary I. Martini, 2006-03-30 This volume focuses on the cultural aspects of learning and cognitive processes examining the theory methods findings and applications in this area The chapter authors cover such topics as family context peer interaction and formal education *Development and Causality* Gerald Young, 2011-06-24 This book sets forth a new model of development from a causal perspective As this is an area vital to several disciplines It has been written at multiple levels and for multiple audiences It is based on the work of Piaget and Neo Piagetians but also covers other major models in development It has elements that make it attractive as a teaching text but it is especially research focused It has clinical applications It presents many new ideas and models consistent with the existing literature which is reviewed extensively Students researchers and practitioners should find it useful The models presented in the present work build on models introduced in prior publications e g Young 1990a 1990b 1997
