“Provides a comprehensive description of efficient nutrient management practices used in diverse cropping systems throughout the world. For each major cropping region, leading international scientists thoroughly discuss nutrient use and management for the major crops and cropping systems, while concisely identifying future research needs and education priorities. Students and professionals interested in the global view of nutrient management technologies essential to world food security and protecting our natural resources will find this an invaluable resource.”

Dr. John Haylin, Professor
*Department of Soil Science,
North Carolina State University, Raleigh*

“The authors have well illustrated the critical importance of integrated nutrient management in meeting crop production and food security needs while maintaining environmental sustainability under a range of environments, agricultural systems, and societal and economic conditions. This will be a valuable desk reference and resource for students and professionals as a compendium to integrated nutrient management approaches that are uniquely applied over a range of geographic, social, and environmental conditions that influence the availability, effectiveness, and environmental consequences of fertilizers, plant and animal manures, soil organic resources, and biological fixed N for crop production.”

Nutrient Management For Sustainable Crop Production In Asia:

Nutrient Management for Sustainable Crop Production in Asia A. E. Johnston, John Keith Syers, 1998 During the past 30 years crop yields particularly of rice have been greatly increased in many Asian countries by advances in plant breeding and by the application of nitrogenous and phosphatic fertilizers This has become known as the Green Revolution which has been a major factor underpinning the rapid growth of Asian economies providing a cheap indigenous food supply However while human populations continue to increase in many cases yields are no longer being sustained due to a reduction in soil quality Thus food security in Asia has again become a source of concern This book is the result of an international conference held in Bali in December 1996 initiated by The World Phosphate Institute IMPHOS to discuss the action which must be taken to reverse soil degradation and improve nutrient levels It includes papers and working group reports on nutrient management and balance the potential of different phosphate sources rock phosphate efficiency in acid upland soils current usage and future requirements for fertilizers sustainability and the environment and policy and pricing Finally there is a summary and conference resolution Contributors to the book come from Europe USA Australia and many Asian countries It is essential reading for soil scientists and agronomists concerned with agriculture in Asia and will also be of interest to environmentalists ecologists and economists concerned with sustainable natural resource management Soil Fertility Management for

Sustainable Development Deepak G. Panpatte, Yogeshvari K. Jhala, 2019-03-07 Soil fertility is the backbone of agricultural systems and plays a key role in determining food quantity and quality In recent decades soil fertility has decreased due to indiscriminate use of agrochemicals and nations around the globe are now facing the challenge of increasing food production while sustainably maintaining soil fertility Written by leading international scientists in the field this book explores soil fertility management strategies including agronomic microbiological and soil science based strategies Highlighting the practices that can be incorporated into organic farming and discussing recent advances it is a valuable resource for researchers wanting to broaden their vision and the scope of their investigations

Hartemink,2003 Wide coverage of soils and perennial cropping systems in the tropics Synthesis of decades of research Challenges assumptions on the benefits of plantations for soil fertility It is generally assumed that soil fertility decline is widespread in the tropics and that this is largely associated with annual cropping and subsistence farming In contrast perennial plant cover as in plantation agriculture provides better protection for the soil This book reviews these concepts focusing on soil chemical changes under different land use systems in the tropics These include perennial crops annual crops and forest plantations Two case studies on sisal plantations in Tanzania and sugar cane in Papua New Guinea are presented for detailed analysis The author demonstrates that soil fertility decline is also a problem on plantations Phosphorus Requirements for Sustainable Agriculture in Asia and Oceania International Council of Scientific Unions.

Sustainable Agriculture Eric Lichtfouse,Mireille Navarrete,Philippe Debaeke,Souchere Véronique,Caroline Alberola,2009-11-11 Sustainability rests on the principle that we must meet the needs of the present without compromising the ability of future generations to meet their own needs Starving people in poor nations obesity in rich nations increasing food prices on going climate changes increasing fuel and transportation costs flaws of the global market worldwide pesticide pollution pest adaptation and resistance loss of soil fertility and organic carbon soil erosion decreasing biodiversity desertification and so on Despite unprecedented advances in sciences allowing to visit planets and disclose subatomic particles serious terrestrial issues about food show clearly that conventional agriculture is not suited any longer to feed humans and to preserve ecosystems Sustainable agriculture is an alternative for solving fundamental and applied issues related to food production in an ecological way While conventional agriculture is driven almost solely by productivity and profit sustainable agriculture integrates biological chemical physical ecological economic and social sciences in a comprehensive way to develop new farming practices that are safe and do not degrade our environment In that respect sustainable agriculture is not a classical and narrow science Instead of solving problems using the classical painkiller approach that treats only negative impacts sustainable agriculture treats problem sources As most actual society issues are now intertwined global and fast developing sustainable agriculture will
