E. Mansel,David J. T. Webster,2009-01-01 By far the majority of women presenting with a breast complaint will be diagnosed as having a benign rather than malignant condition Despite this clinical and research interest has always favoured breast cancer and few publications have attempted to cover benign breast disorders as an independent entity focusing instead on benign breast disease in relation to breast cancer and none provide the complete and pragmatic coverage found in this text Hughes Mansel and Webster s Benign Disorders and Diseases of the Breast represents the distillation of over 35 years of clinical experience and research in the Cardiff Clinic and is unique in its depth of coverage of the entire spectrum of benign breast complaints The third edition of this critically acclaimed book provides practical and detailed management guidelines Relevant investigations are discussed and clear advice is given for the most effective treatment strategies in each condition including dealing with treatment failures and recurring problems The underlying pathology and physiology are also discussed from the clinician s viewpoint to help understand clinical presentations and response to treatment

The Laboratory Mouse, Hans Hedrich, 2004-08-21. Among animals used in research, teaching, and testing, mice are now widely recognized as the most important model for human diseases and disorders. They comprise the majority of all experimental mammals and tend to be the model of choice used for research into many diseases and disorders, including cancer, heart disease, asthma, Alzheimer's, Down syndrome, deafness, osteoporosis, obesity, diabetes, and even mental health research. Additionally, the laboratory mouse continues to play a widely publicized vital role in the human genome project. One of the most time-consuming activities in research laboratories is looking up information specific to the species or strain of animal being used. This book, part of the highly successful Handbook of Experimental Animals series, allows the user quick access to any point of interest on the mouse as an experimental model. Edited by Hans Hedrich, Hannover Medical School. Comprehensive reference source written by international experts. Well-illustrated with high-quality, detailed images. Two-color, user-friendly format combined with color plate sections.
