Patterns Essential Building Blocks Of Experience:

Patterns Marilyn Charles, 2013-06-17 In recent years various tributaries of psychoanalytic and developmental theory have flowed into our dawning understanding of the role of early sensory and affective experiences in the construction of our personal worlds In *Patterns Building Blocks of Experience* Marilyn Charles shows how such primary experiences coalesce into patterns those essential units of meaning that capture the unique subjectivity of each individual Frequently known by their prosody or affective melody patterns come to have profound meanings that we utilize in constructing basic notions of self and other Through pattern Charles holds we approach elusive meanings through dimensions of shape contour and affective resonance Such patterned understandings in turn become a mode of interchange through which we touch one another in ways that go beyond the overtly physical Analytic patients Charles finds have often led early lives too full of noise to use their early sensory and affective experiences constructively Such patients tend to live out patterns that operate unconsciously and have become literally incomprehensible Analytic communication by drawing explicit attention to such patterned experience provides new images that intrude on ingrained patterns of thinking about the self and other Out of the productive clash of analytically co constructed images and the invariant patterns of the past emerge new conceptions of what the patient may choose to be in the present moment Through it all Charles displays an admirable willingness to sit in difficult spaces and to work through troubling therapeutic impasses from the inside out rather than from some point of ostensible safety This finely textured and richly evocative study which grows out of Charles extensive clinical work with artists writers and musicians is a signal contribution to developmental theory clinical theory and the psychology of creativity **Essential Building Blocks of Human Nature** Ulrich J.
