the promises of fossil hunting on a grand competitive scale      Spine of the Continent Mary Ellen Hannibal, 2013-08-06 As climate change encroaches natural habitats are shifting while human development makes islands of even the largest nature reserves stranding the biodiversity within them The Spine of the Continent profiles the most ambitious conservation effort ever made to create linked protected areas from the Yukon to Mexico Backed by blue ribbon scientific foundations the Spine is a grassroots cooperative effort among NGOs large and small and everyday citizens It aims not only to make physical connections so nature will persist but also to make connections between people and the land In this fascinating and important account Mary Ellen Hannibal travels the length of the Spine and shares stories of the impassioned activists she meets and the critters they love      *Encyclopedia of Anthropology* H. Anthony Aveni, 2025-03-18 In this authoritative accessible and at times funny and irreverent work distinguished anthropologist Anthony Aveni speaks to the trained astrophysicist and the curious layperson alike about a simple but previously unexplored question Why do we assume aliens if they are really out there behave just like us Aveni's newest work departs from the usual scientific treatment of extraterrestrial intelligence by probing the historical and widely neglected anthropological record which offers relevant analogous incidents of contact among terrestrial cultures Beginning with theories of the evolution of life and culture advocated by astrobiologists *Aliens Like Us* explores how the Western cultural imagination is influenced by ways of knowing that are deeply embedded in the minds of

the questioners for example how we consider the ownership of property the idea of progress and even the way we classify things The lessons of anthropology offer not only value structures from other cultures that differ profoundly from our own but also testify to the diverse ways in which alien cultures interact Finally on the question of potential first contact Aveni closes with a fascinating exploration of the image of extraterrestrials in popular culture that is derived in part from the hugely influential realm of science fiction

**The Evolution of Adaptive Systems** James Patrick Brock,2000-07-12 The data of evolutionary biology have changed in a very radical way in recent years the most significant input to this revolution being the advances made in developmental genetics Another recent development is a noticeable shift away from extreme specialization in evolutionary biology In this we are perhaps to be reminded of George Gaylord Simpson s comments evolution is an incredibly complex but at the same time integrated and unitary process The main objective of this book is to illustrate how natural adaptive systems evolve as a unity with the particular objective of identifying and merging several special theories of evolution within the framework of a single general theory The Evolution of Adaptive Systems provides an interdisciplinary overview of the general theory of evolution from the standpoint of the dynamic behavior of natural adaptive systems The approach leads to a radically new fusion of the diverse disciplines of evolutionary biology serving to resolve the considerable degree of conflict existing between different schools of contemporary thought The book is a timely volume written by a natural historian with a broad view of biology The author draws examples from a large range of organisms from many different habitats and niches where interesting adaptations have evolved Probes deeply into mechanisms of evolution such as developmental genetics morphogenesis chromosome structure and cladogenesis Clear definition of terms with illustrations visualizing the main theoretical structures and point by point summaries clearly stating the principal conclusions
